ditto...i'm a tech for 800 and 900MHZ trunked radio systems in the Houston area....the interferance (mainly paging xmtrs and other spurious uhf xmtrs) gets very bad...and the ONLY FCC field rep is a suit and tie type that doesn't work the field..we've been told in the past to "work it out among ourselves" with violators!!!!

> sure it works.

Well, true it works, but has one problem. The Alinco 605 and 610,
and I suspect all dual banders out there too, have wide open
front ends that pick up birdies, taxi transmissions, etc when
those sources are close by. This would not be anthing to worry
about in a mobile....just lasts a second or so. But at a station
that is repeating out to a mountain and back, it can get
aggravating at times. Everyone then hears the intermod, birdies
and images, etc. My next step is to get some VHF and UHF modules
and a UHF/VHF duplexer (cheap) and replace the 605 and 610 from
this role. Maybe even a cavity filter on the receiver side.

This would not be a problem on a farm on a hilltop as I suggested.
But in a downtown area, intermod alley, etc., it rears its ugly head.

We do not coordinate all stations as can be done by a central
CDMA cell site. They also are allowed far longer bit streams.

And, Gary, I do NOT want to worry about talking to
two or three hams scattered within a 20 mile radius.
I want to cover 100 hams at a ham fest. I want to
cover multiple portable RF device used throught my
home by me and family.

TAPR also disagrees with you. If you've got the
problems solved, give them a hand. They believe,
as do I, that the rules are just too resrictive.

I've said I cannot get the densities I want (and
that I believe we need) as the rules now exist.
If you have done this, give us all a break and
publish your solution.

Disclaimer: I in no way speak for TAPR. My
understanding of their opinions comes from
reading their web page. http://www.tapr.org

You know, this type of reasoning is truly amazing!!!
We have an incentive system catering to HF and Morse.
Add to this rules and regulations that PREVENT a dense
SS network. And then you say we don't need rule
changes because our networks are sparse! Big news
everbody! Our networks are SPARSE!!!! Can ya believe it!!??

Hey Gary! You didn't suffer some severe head injury
over there at Destructive Testing, did ya? ;-))

> decorrelate the stream so that two stations can share the
> same center frequency.

Your bullshit is reaching ever greater levels.

I guess you have no experience with syncing up on the
receive side via a corallator circuit. With DSSS
this happens in well under a second. This is because
the receiver and transmitter PN streams are not at
exactly the same data rate. This allows the two to
eventually sync up and corallate. This sliding window
is an easy way to sync up. But then you suggest we
have multiple stations on different parts of the SAME
sequence and all will be cool. But this means receivers
will be syncing up on bit streams they were not intended
to receive.

Wanna try again, Gary? ;->

David: cute idea, but it doesn't work that way. Your receiver will capture the stronger signal. That will be the local repeater. The audio will be tested for CTCSS tone and since it will not be correct, the audio circuit will not turn on. Therefore, you will not hear any audio when the local repeater is on. You will however, notice that the signal strength bars will indicate that the local repeater is being received.

Well, the squelch may break but the receiver's audio output will not
have any audio on it.

>However, does this mean that if both the distant
>repeater (with the correct PL so my rig would break squelch) and the
>local one are keying at the same time will I get interference?

Yes. The CTCSS signal only keeps the receiver muted when the proper
CTCSS signal is not present.

>I have a feeling many people use CTCSS to keep distant repeaters from
>keying while monitoring local repeaters. I would like to use it in
>the reverse... to monitor distant repeaters with the same frequency as
>local ones.

The problem is that when the local repeater comes on, its RF will override
the signal from the distant repeater and you won't hear the distant
repeater anymore. If you had a CTCSS decoder set for the distant repeater,
your receiver would mute when the local repeater came on because you
wouldn't be hearing the distant repeater's CTCSS tone any more.

> Carl - wa6vse
> carl@ais.net

Carl: How do you perceive requiring code as "to the detriment of the entire service?" The no-coders are constantly screaming "I don't use that and I never will!" Try saying that in college and scream that you don't need chemistry, latin, history, etc., to get a degree. My 13-year old hates Social Studies, but I explain to him that it's a requirement and that's that, and you simply don't always have things your way. Myself, I don't build radios nor repair them. I don't really care how tubes and transistors work, nor give a hoot about building homebrew stuff. So, using the "I'll never use it" logic, should I have been excused from learning that material to get my license? Of course not!

To me, Morse code is something that should be a requirement, and if nothing more, is a filtering system that seperates the serious ham radio candidate from the "not quite as serious" candidate. If you want ham radio bad enough, you'll jump all of the hurdles, including the code.

It's funny, you know...if code was easy to learn, no one would be bitching about it. But since it requires a bit of WORK and PRACTICE to master, you hear "that #@%$*& code is useless" ect., etc., etc.

If people would devote as much time to learning the code as they did complaining about how worthless it is, they would have it licked in no time. Not only that, but they would enjoy the very satisfied feeling of mastering a wonderful method of communication that our ham forefathers used to pave the way for us.

Isn't that simplex frequency? Or has the 2M band plan changed in the last 6 months? (That's how long it's been since I was on 2M).

This is why many of the ham repeaters and remote bases are running
commercial equipment, such as Motorola or GE or such. Those types
of base radios are designed to be operated in a heavy RF environment.
I'm not saying other types of equipment won't work, just that to keep
it calm you must sometimes provide additional filtering, etc., that
you'd not need on commercial two-way equipement.

There was an article in one of the two-way radio magazines here in the USA that told about how a city (Boston, Massachusetts ???) had a radio amplifier system designed to supply a number of specific frequencies into and out of an automobile tunnel. I have the magazine at work. However, this is probably not feasible for ham radio operations, as it's necessary to pass only certain frequencies and has to be set up ahead of time (spending of money).

It's probably in the microwave band (above 2Ghz), you'd need some type of converter to change it to a regular TV channel.

Most of the pictures sent by the helicoptors is on microwave. They
use a fairly directional system on the helicoptor which actually tracks
the mountain top receiver.

I believe it is in the 2GHZ area.

Unless you are between the two, chances are not favorable you would
see anything.

You could call Troll systems, in Valencia CA and ask. They make
the xmitter systems.

C L O S E D C I R C U I T A D V I S O R Y

Newsline Report number 1000 with a release date of Friday, October 11, 1996 to follow.

(*****
The following is a QST

The International Amateur Radio Union meets in Israel to discuss the future of ham radio worldwide and President Clinton proclaims Amateur Radio Week in the United States. These stories and more on Newsline report number 1000 coming your way right now.

(*****
SPECIAL WELCOME

Hello and welcome. This newscast represents our 1000th week of delivering to radio amateurs worldwide news and information about our communications service. We had planned on bringing you a special retrospective on the stories that we have covered the past nineteen and a half years, but there is so much breaking news that we are preparing a separate program instead. That show will be aired for us by RAIN -- the Radio Amateur Information Network based in Chicago -- and by other services -- at a later date. Right now, here is the very latest news.

(*****
IARU MEETS

The IARU Region 1 Conference, not the WRC 96 Conference as we reported last week, ended on October 6th. Representatives from 52 countries in Europe, Africa, the Middle East and the Commonwealth of Independent States met in Tel Aviv, Israel. The meeting considered one hundred and twenty

papers which present proposals for the development of the next generation in Amateur Radio. Included were dissertations on HF, VHF and Microwaves, contesting, new communication techniques, spectrum monitoring systems and in aiding potential amateurs in emerging countries.

The Conference had held meetings of a number of Permanent Working Groups to discuss Amateur Radio Direction Finding, Common Licensing, EMC, High Frequency Contesting and the STARS - 'Support The Amateur Radio Service' program.

The future of the amateur service was a major topic and much of the discussion centered around bringing an active corps of radio amateurs to these nations. Also discussed was the future of Morse code testing as a requisite requirement for obtaining a ham radio license.

(*****
PRES. CLINTON DECLARES AMATEUR RADIO WEEK

Thanks to the perseverance of a New York ham, the week of October 7th to the 13th was Amateur Radio Week nationwide. Darlena Mayo, KB2EPU, says that she has been working with the White House for quite some time to get President Clinton to declare such an event. When she heard that it had been approved, she was ecstatic:

"I was just totally elated. I can not put words into how I felt when I received this. I just went to cloud twenty seven. Because a lot of work, a lot of effort went into this. It took me several months and it took a lot of calling. I won't even think about my phone bill." KB2EPU

Darlena Mayo only learned of the proclamation on Tuesday October the 8th. She faxed us a copy of the announcement and it reads like this:

"Warm greetings to everyone observing October 7 through 13, 1996, as Amateur Radio Week.

In the past century, the medium of radio has changed the way we live and the way we view our world, and amateur radio operators have played a vital role in this communications phenomenon. Sharing knowledge and technological expertise, connecting computers via radio equipment, and linking people all across the globe, ham radio operators have helped to make our world a true global village. But even more important, they have provided a crucial lifeline of relief in times of disaster and hardship, ensuring that hope and help are on the way to those in need.

Amateur Radio Week offers us a welcome opportunity to thank our nation's amateur radio operators for their commitment to excellence and their willingness to work for the well-being of others.

Best wishes for a wonderful week.

(signed)

Bill Clinton"

Our congratulations to Darlena Mayo, KB2EPU, on a job well done and to President Bill Clinton for taking the time out of his busy campaign schedule to issue the declaration honoring the Amateur Radio service.

(*****
FEMA TO FCC: NO SHARING OF 2 METERS AND 70 CM

The Federal Emergency Management Agency better known as FEMA is saying no to sharing or reallocating the 2 meters and 70 centimeter ham bands to Low Earth Orbiting Satellites. In a letter to the FCC task force currently evaluating new spectrum for use by LEO satellites, FEMA Manager Paul Reed, tells the committee that his agency opposes any such change.

Reed says that Amateur Radio operators have a history of supporting state and local government emergency operations by providing needed communications. He says that many local communities served by ham radio have extremely limited resources and would be without any form of back-up communications without Amateur Radio.

Reed says that FEMA has been in contact with its state and local emergency management partners across the nation. That it is their belief that authorizing access to the mobile satellite service in the 2 meter and 70 centimeter bands will seriously degrade the ability of these groups to support their public service requirements.

The FEMA Manager ends his letter by strongly urging the FCC task force to remove both of these ham bands from any further consideration as a new home for Low Earth Orbiting Satellites. He says to leave them for use by ham radio and its emergency service partners, nationwide.

(*****
MITNICK PLEADS NOT GUILTY

An update on convicted computer hacker Kevin David Mitnick, N6NHG. In a court appearance a few days after he was indicted, Mitnick entered a not guilty plea to new charges that he illegally gained entry to computer systems, pilfered millions of dollars worth of software and caused damage to the systems.

Mitnick appeared before Judge Marianna Pfaelzer and entered a not guilty plea on all twenty five counts of computer and wire fraud, possessing unlawful access devices and intercepting electronic messages. According to court documents, the companies affected by Mitnick's alleged activities included Novell, Nokia, NEC, Motorola, Fujitsu and the University of Southern California.

The thirty three year old ham is being held without bail at a federal detention facility in Los Angeles. He also has a new lawyer.

According to news reports, Mitnick is now represented by Donald C. Randolph. Randolph represented one of Charles Keeting's top aides in the Lincoln Savings and Loan rip-off several years ago. Ironically, Marianna Pfaelzer is the same judge that sentenced Keeting to twelve and a half years in federal prison after he was convicted.

(*****
WINDTRACKS 10

Another in a series of ham radio high altitude balloon flights is taking place as we go to air and this one will be on 6 meters.

Windtracks 10 is set and ready for launch on Saturday, October 12th. The balloon will be launched about 7:00 AM EST from the New Augusta Public Academy northwest of downtown Indianapolis.

Students from the middle school will handle the radio communications and tracking of the balloon as it ascends into suborbit before it parachutes back to earth.

The project will carry a crossband repeater with output on 444.85 MHz and also on 6m on 52.525 MHz. Amateur tv cameras will send live pictures back to earth while an onboard GPS packet unit transmits APRS data.

The launch scheduled for September was scrubbed due to rain.

We will let you know the results of Windtracks 10 in a future Newsline report.

(*****
GATE 2 VANITY UPDATE

Just how many Gate 2 Vanity Call Sign applications the FCC ultimately will receive is still a matter of speculation. Original FCC plans called for running off 25,000 Form 610V copies for the entire vanity program. Later, the Commission upped the tally by nearly a factor of 10.

The ARRL says that it alone has distributed up to 20,000 vanity callsign application packages. This includes direct replies to SASEs, electronic requests and distributions at hamfests and conventions.

(*****
HAM RADIO AND MORE vs WWCR

Ham Radio and More -- the weekly ham radio talk show out of Phoenix, Arizona is no longer live on WWCR shortwave. According to show producer Len Winkler, KB7LPW, he has received a letter from Adam Locke, the operations manager of WWCR. In it, Locke says that the time formerly allotted to Ham Radio and More has been taken over by the religious broadcaster.

Lock tells Winkler that WWCR will continue to carry Ham Radio and More on tape delay on Mondays, at 09:00 UTC on 3.210 MHZ and on Sundays, at 03:00 UTC on 3.215 mhz. Locke also says that if other time frees up, he will return Ham Radio and More to live broadcast. Meantime, you can hear the program live over broadcast radio stations across the United States and in Real Audio on the World Wide Web.

(*****
ARRL MEMBERSHIP GROWS

The ARRL says that its membership hit an all time record of 173,491 members in August. The previous all time high of 172,752 was reached in March 1995, just before a small dues increase took effect that caused a slight decline.

(*****
NEW INFO BRANCH MANAGER

The new ARRL Regulatory Information Branch supervisor is Tom Hogerty, KC1J. Hogarty was formerly the assistant contest manager. He replaces Norman Bliss, WA1CCQ, who recently completed his masters degree and accepted a position as a school librarian. Al Gordienko, KF2FB, has been named as the new assistant contest manager. He'd worked previously in the ARRL-VEC.

(*****
NWS AND HAM RADIO

If you're a ham interested in using your skills and equipment during emergencies, you may get a request for help from the federal government. The National Weather Service wants to make more use of hams.

Amateur radio communications was one of the topics at a mid-September Weather Service Conference in Salt Lake City, Utah. Among those invited to speak was Newsline's David Black, KB4KCH.

These are times of big changes for the National Weather Service. The agency is undergoing what's called modernization. Some offices are closing, while others assume more responsibility. Offices which used to issue weather warnings for roughly a dozen counties may have to cover more than twice that number under the new plans.

At Salt Lake City, meteorologists from eight western states discuss establishing and strengthening amateur radio communications networks. Paul Flatt, KC7OVO, is a Weather Service warning coordination meteorologist.

"In Tucson, Arizona, we started the year with about 40 ham radio operators as Skywarn spotters. I think we are up to 75 or 80 at this point in time. I would like to see that grow higher, to put an upper number on it, I couldn't really do that. To cover the area so the entire portion of where I'm at, southeastern Arizona, has some ham radio operators somewhere nearby." KC7OVO

The Conference addresses issues including how to establish spotter groups, frequencies and resources available, and the various types of emergency communications groups including RACES and the Amateur Radio Emergency Service. Rich Douglas is the Conference organizer.

"We could do a lot more and hope to do a lot more and are trying to plan to do a lot more with amateur radio. I would say three or four years ago we did not take advantage of this wonderful opportunity. Now we are trying to organize ham radio networks. Working with our offices, each of the 24 offices, for about two or three years most of our offices have installed radio equipment. Our Regional Director, Dr Tom Byer supports this program.

Ans he not only says he does, he does with his budget. He makes sacrifices in his budget to make sure we start gettin' some equipment." Douglas

Concern is expressed over the ability of hams to provide emergency communications services if their frequencies are invaded by commercial users. Several meteorologists say they will write letters opposing possible allocations to a commercial satellite service said to be considering the 2 meter and 440 MHZ amateur bands.

Conference attendees learn about amateur equipment and radio systems, packet and amateur televison. Even with Doppler radar and other high tech equipment, hams are needed to help confirm conditions forecasters often suspect but have no proof exist. Again, Rich Douglas:

"First of all, they're very dedicated people. We have found they are among the most reliable group that we can count on. And of course the advantage of instant communications by way of a radio." Douglas

The Weather Service continues to install amateur radio equipment in various offices, as the agency moves ahead with plans to make more use of ham radio in serving the public.

Skywarn storm spotting isn't the only amateur service that forecasters learned about during the Conference. Attention also focused on using ham radio for backup communications when normal circuits fail. That's exactly what happened in early September when Hurricane Fran knocked out phone lines to Weather Service offices in North Carolina.

(*****
HAM-ASTRONOMER HONORED

Some names in the news. First is Dr James M. Moran, K1AKE, who has been awarded the 1996 Karl G. Jansky Lectureship by Associated Universities Inc and the National Radio Astronomy Observatory. The Jansky Lectureship is awarded for outstanding contributions to the advancement of astronomy. Moran, a professor of astronomy at Harvard University, is best known for his application of the techniques of very long baseline interferometry to the study of astronomical masers.

(*****
KD4WUJ WINS COUNTRY MUSIC AWARD

And congratulations to entertainer Patty Loveless, KD4WUJ on her first Country Music Association Female Vocalist of the Year award. According to news reports, Patty received a standing ovation at last weeks 30th Annual Country Music Awards presentation held at the famed Grand Ole Opry in Nashville, Tennessee.

Last year, Patty Loveless made history when she became only the second woman to win the Country Music Associations' prestigious Album of the Year award for her album When Fallen Angels Fly.

Both Patty and her husband / manager Emory Gordy, W4WRO, are active hams.

(*****
HUDSON DIVISION CONVENTION

On the convention scene, the semi-annual ARRL Hudson Division Convention takes place on Sunday October 20th at the Huntington Hilton Convention Center in Melville, New York. Melville is out on Long Island and the convention will feature commercial exhibits, seminar sessions, VE testing and guest speakers including ARRL First Vice President Steve Mendelsohn, WA2DHF.

This one day convention happens only every other year. With Vice President Mendelsohn serving on the League's WRC 99 committee, this is not a show to miss.

For more information please contact the Radio Central Amateur Radio Club in care of Neil Heft, KC2KY at his callbook address.

(*****
DXCC UPDATE

In DX, the ARRL's DXCC Desk reports the number of unprocessed applications at the end of August was down to 464 representing 27,814 QSL cards. The desk received 376 applications for endorsements and new awards during July, and 655 applications during August.

Also in August, DXCC Manager Bill Kennamer, K5FUV, traveled to Tokyo, Japan. There he checked DXCC cards at Ham Fair. Kennamer returned with over 200 DXCC applications, representing over 14,000 QSLs.

(*****
AMATEUR RADIO LO-JACK

And finally, most people are familiar with the Lo-Jack system for recovering stolen vehicles. Amateur radio operators have been experimenting with a similar system called APRS which really isn't designed to recover stolen cars, but certainly could be used in that mode.

Now, the San Diego California Responder newsletter reports that recently, as Scotty Leikett, W8KXX, was going to bed, he looked out his window and noticed that his APRS-equipped car was missing. One glance at his computer terminal showed that the vehicle was across town and moving! He notified the San Diego Police Department, but the dispatcher would not believe that an owner had the ability to track his stolen car by radio.

When the policeman arrived, Scotty explained the ARPS system and showed him the car's symbol with the unique amateur call on an APRS city map. The officer relayed the precise location to the police cruisers.

As it happened, the stolen car and a police cruiser were stopped at the same red light with the thieves were still in the car. Surprised at the officers' sudden attention, the culprits made an illegal left turn and the chase was on. Soon after the crooks abandoned the car and escaped, leaving a hand gun behind.

The car was recovered without major damage thanks to ARPS and ham radio.

(*****
THANK YOU ALL

Before we go we want to pause for a moment to thank the worldwide ham radio community for is support of Newsline for the past nineteen and a quarter years. For almost two decades we have had the honor of bringing you news and information that we hope has helped you to understand the service a bit better and to enjoy it even more.

No, not every story we report is good news. Sometimes what we detail brings the same tears to our eyes as it does to yours.

Unfortunately, not all news is good news and as the messenger it is our job to present it in as objective a way as we can. We do not succeed every time, buy we can assure you that we do try.

So as we close Newscast number 1000 and head to number 1001, we again say thank you -- thank you for supporting us and giving us the drive to continue. Your messages and letters and ongoing financial support tell us that what we do is appreciated.

(*****
And for this week, and for the first 1000 weeks, that's all from the Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California

ZIA is nothing..comapred to the Evergreen Intertie in Washinton....Links
Montana,N Idaho, Oregon, Washington, and British Columbia together.
Links and ports interigation codes all user avaliable. Trunks are N/S
E/W and KBARA. Not as good as it use to bee though to be honest. Alot
of ports are shut on the OFF position due to the system is so huge. They
can be brought up though.

We also have a HUGE link system in ALASKA called the ICEWORM network
that links all of Alaska (Fairbanks, Juneau, ANchorage, Kenai.) etc
together with NetRom ports into internet. KEY TO THIS though is its ALL
PACKET.....also Clusters avaliable on itl.

Great system....ICEOWRM....connections are supper fast.

Forgive the misspellings.

opps :)

HUDSON DIVISION CONVENTION

On the convention scene, the semi-annual ARRL Hudson Division Convention takes place on Sunday October 20th at the Huntington Hilton Convention Center in Melville, New York. Melville is out on Long Island and the convention will feature commercial exhibits, seminar sessions, VE testing and guest speakers including ARRL First Vice President Steve Mendelsohn, WA2DHF.

This one day convention happens only every other year. With Vice President Mendelsohn serving on the League's WRC 99 committee, this is not a show to miss.

For more information please contact the Radio Central Amateur Radio Club in care of Neil Heft, KC2KY at his callbook address.

DXCC UPDATE

In DX, the ARRL's DXCC Desk reports the number of unprocessed applications at the end of August was down to 464 representing 27,814 QSL cards. The desk received 376 applications for endorsements and new awards during July, and 655 applications during August.

Also in August, DXCC Manager Bill Kennamer, K5FUV, traveled to Tokyo, Japan. There he checked DXCC cards at Ham Fair. Kennamer returned with over 200 DXCC applications, representing over 14,000 QSLs.

AMATEUR RADIO LO-JACK

And finally, most people are familiar with the Lo-Jack system for recovering stolen vehicles. Amateur radio operators have been experimenting with a similar system called APRS which really isn't designed to recover stolen cars, but certainly could be used in that mode.

Now, the San Diego California Responder newsletter reports that recently, as Scotty Leikett, W8KXX, was going to bed, he looked out his window and noticed that his APRS-equipped car was missing. One glance at his computer terminal showed that the vehicle was across town and moving! He notified the San Diego Police Department, but the dispatcher would not believe that an owner had the ability to track his stolen car by radio.

When the policeman arrived, Scotty explained the ARPS system and showed him the car's symbol with the unique amateur call on an APRS city map. The officer relayed the precise location to the police cruisers.

As it happened, the stolen car and a police cruiser were stopped at the same red light with the thieves were still in the car. Surprised at the officers' sudden attention, the culprits made an illegal left turn and the chase was on. Soon after the crooks abandoned the car and escaped, leaving a hand gun behind.

The car was recovered without major damage thanks to ARPS and ham radio.

(*****
THANK YOU ALL

Before we go we want to pause for a moment to thank the worldwide ham radio community for is support of Newsline for the past nineteen and a quarter years. For almost two decades we have had the honor of bringing you news and information that we hope has helped you to understand the service a bit better and to enjoy it even more.

No, not every story we report is good news. Sometimes what we detail brings the same tears to our eyes as it does to yours.

Unfortunately, not all news is good news and as the messenger it is our
job to present it in as objective a way as we can. We do not succeed every
time, buy we can assure you that we do try.

So as we close Newscast number 1000 and head to number 1001, we again
say thank you -- thank you for supporting us and giving us the drive to
continue. Your messages and letters and ongoing financial support tell us
that what we do is appreciated.

(*****
And for this week, and for the first 1000 weeks, that's all from the
Amateur Radio Newsline. You can write to us at:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

For now, with Bill Pasternak, WA6ITF at our editors desk, and reporters
worldwide, we at Newsline say 73 and we thank you for listening.

An even better question is how many of those modes can Carl himself build
from scratch?

We're not all appliance ops like you, Carl. You're idea of homebrewing
is to open the box, remove the packing material, plug in the rig and
auto-tuner, and connect the store-bought antenna.

by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This
is
especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

This is not unique to "new" amateurs. The other day at the radio club I repaired a radio for a full call (has had a licence for 30+ years). The fault was a simple mechanical mis-alignment of the PTT plunger onto the switch. This same amateur needed help to determine that the lead fromn the battery charger has a break in it.

Mind you, he is a good operator
Mark.

>Your assumption that I have no understanding of modern communications
>technology is pure nonsense.

Your asinine, ridiculous comments leave no doubt that you haven't a
clue about modern communications technology ... I'm sure I have
technicians in their mid 20s working for me who know far more than you
..

[snipped ridiculous claims that fly in the face
of every comment you've ever made here]

>OTOH, I don't believe ham radio has been exactly left
>stagnating. Read the spec sheets on some of the newer ham rigs. They
>don't sound "stagnant" to me. They sound very modern.

They sound about 10-15 years behind the times (for anything except ham
radio, that is) ... if you knew where things were today, you'd know
that ...

>I believe the
>various manufacturers of amateur equipment have folded in the latest
>technology and implemented every technological advantage they can within
>financial limits. There are some superb communications sets available now.

This just goes to show again how little you know ... I'm sure you were
one of the first ones to get suckered into one of those "high-tech"
quadruple conversion superhets ... aka "Spur Gardens" ... at an
inflated, bend over and grab your ankles price ... "Duh, gee Mabel, it's
got 4 IFs ... must be better than our old one, that only had 3 ..."

>Well, I believe I do know what I am talking about.

Well, I believe that you're seriously self-deluded ... EVERY argument
you've made since I first encountered you here has been totally absurd
and technically inaccurate ...

>Suppose your job is delivering bread to grocery stores all day. At the
>end of the day, your boss says you have to log on the computer and
>enter your time worked which takes about 15 minutes. Then you tell
>your neighbors that your job is to work at a computer. You don't
>mention that the majority of your time is spent delivering bread.

Oh ... now I get it ... you're talking about YOURSELF here ... you
deliver bread, you "work with computers" (and you talk on the two-way
radio in the bread truck, sometimes, so you also "understand modern
communications" ...) NOW I GET IT .... thanks for clarifying that ...

>They permit our hobby activities so we will be operationally sharp
>when an emergency comes up that requires our services.

Yeah, hanging out on 14.313 and screaming obscenties like an asshole
really helps to keep one operationally sharp, all right ... so does
seeing how badly you can stomp your competitiors int the dust in the
contest of the weekend ... so does saying "What's your 10-10 number?"
over and over and over again ... so does "UR 599 in ___ PSE QSL TNX
<SK>"

What we need Jim, is a test that will keep idiots like you from getting
licenses ...

kk5dr@io.com asked of Amateur Radio:

>
>
> Will it be alive, as we know it, in 10-20 yrs.? Your opinions please.
> .

I can't speak for the world, but certainly in Australia, the amateur population is ageing at a faster rate than the general population and ultimately, this means that the hobby will die out unless significant effort is devoted to the people side of the hobby.

In Australia anyway, the hobby is becoming dominated by old men (I include myself here). I have a feeling that unless a wider demographic spread can be introduced to the hobby, it will face serious problems.

Paradoxically, I think the problem is because amateurs, here anyway, are poor communicators (to the general public). I think that this may become more of a problem if the population of amateurs continues to concentrate in a single age group. Unless people of all ages can see a role model in the hobby which roughly matches their own age & interests, it will become harder to get them into the hobby, given the wide range of communication options available to them.

I don't think this is a lost cause, BTW, just one that needs effort.

Mark.

The best idea is to email their ISP. Usually, individuals who do this sort of thing are too stupid to forge an email address. You would then take the portion of their email address that comes after the @ and append it with "postmaster". Once you have an email address that looks like: postmaster@fubar.com you then email a copy of the offending advertisement to their postmaster with a note stating that you wish this behavior to cease. This is amazingly effective.

I am trying to locate component values for the components on my "V&V Local unit" (at least that is what my Technical supplement calls it).

I can't determine the values of the parts on this board!! I see the names but can't match them up to any parts list anywhere.

The parts are:

C 4003
C 4004
C 4016
C 4002
C 4005
C 4012
C 4014

L 4002
L 4003

Q 4001
Q 4003

R 4006
R 4001
R 4002
R 4005
R 4009
R 4004

If anyone knows what the values (and or industy, not Yaesu, part numbers) are for these items I would greatly appreciate it if you could forward them to me. It seems I must be missing a page of my Technical Supplement.

Thanks a bundle,

"If it ain't broke, it doesn't have enough features yet!"

>whistle... or a mirror... you can signal a plane... What I am trying to
>say is that morse code can be sent with practically anything. (ever
>tried to signal Clover on a whistle?)

The problem with this scenario is that SAR personnel aren't trained
in receiving Morse. They are trained to listen for three short blasts
on a whistle (or three gun shots), a pause, three more short blasts,
another pause, ad infinitum. This is an easily recognized and easily
maintained cadence which has proved over the years to be an effective
wilderness distress signal and sound source for homing in on the lost
or injured party.

Pilots engaged in SAR aren't required to, and generally don't have
the training to, read Morse by heliograph. They are trained to look
for repeated patterned flashes on the ground, however. In neither
case is knowledge of Morse of any real benefit to the lost or injured
party. First because potential rescuers generally don't know it. And
second because the primary purpose of such emergency signaling is
to attract attention and aid in location of the victim. Any distinctive
repeated sound or light pattern can serve that purpose, but historically,
back to at least the days of the Hudson's Bay Company, it has been the
repetition of groups of three noises, flashes, puffs of smoke, etc that
have served this purpose.

>And I AGAIN stand by my claim
>that morse is the most readable mode under QRM. A good op can copy
>morse when SSB couldn't make it through... And since one of the main
>purposes of ham radio is to provide emergency communications, morse is
>only a natural choice.

Strawman. Almost anything can beat naive analog voice modes in heavy
interference. OOK is only one of the methods, and it is among the least
efficient and effective at doing so. The generally most effective method
to counter jamming (and any discrete spectrum interference can be considered
a form of jamming) is FH SS, which is why the military uses it so much.

Coherent techniques are more effective than OOK in a gaussian weak signal
environment. A current amateur example is PACTOR II. However, other methods,
such as those used for the past 25 years by NASA for deep space missions,
by the Navy for communications with submarines, and similar techniques

adapted inexpensively by Lowfer hobbyists, are also more effective than OOK Morse.

If OOK Morse is best, why doesn't NASA and the military use it anymore? It should be a clue that when mission critical communications is fielded, OOK Morse is conspicuously missing from the list of candidate methods considered by services other than amateur radio. Do you think amateurs know something the professionals don't, or could it perhaps be the other way round?

It has been nearly 50 years since Shannon founded the basis for modern information and coding theory. Other services have adopted the fruits of that research (albeit sometimes slowly and with hesitation). Amateurs largely are not even aware that such techniques exist. It is past time for that to change. One step in that change is puncturing the myth of OOK Morse superiority.

Another step in that change is to show that these other techniques are not too complex or expensive for amateurs to understand or adopt. The central ideas of modern information and coding theory aren't hard to grasp, and implementing many of them isn't difficult or expensive in principle. The military in particular has tended to throw large sums of money at the implementation issue, as they've typically done with other things, but the example of the Lowfers shows that isn't necessary. In fact, use of some of these modern techniques can actually reduce the expense and complexity of meeting a particular communications goal. Efficient systems almost always work out that way.

A recent example of that is DSS television. The application of modern information and coding theory has allowed a $199 system sporting an 18 inch dish to deliver 200 channels of fairly high quality TV to the home. By contrast, the older system it replaces requires a 6 to 12 foot dish system retailing for $1,000 or more to deliver up to 24 channels of analog FM television on the same satellite power budget. The cheaper, smaller, more elegant solution exploits the power of modern information theory to more efficiently use available resources.

Now amateurs aren't likely to want or need the capability to send and receive 200 channels of TV, but the principle used scales nicely. For the information rates typically used by amateurs, systems can be correspondingly simplified, or the power level the amateur needs to use can be proportionately reduced, lowering radio and antenna requirements at both ends of the communications path, and incidentally reducing the interference level for other users of the spectrum.

>
>I can easily repair a DIP-based device... a $15 desoldering iron
>from RatShack and some experience gives me perfect unsolders 99%
>of the time... but I can not afford an SMD station.

You appear to have a mistaken impression that SMD work requires
an expensive SMD rework station. In fact it does not. All you
really need is a source of static hot air and a few inexpensive
tools and supplies. A Weller Pyropen Jr is an inexpensive and
convienent source of static hot air. Add tweezers, toothpicks,
small bottles of solder paste and flux, a bit of solderwick, a
bit of modeling clay, and a jeweler's loupe, and you have a
complete SMD rework station that'll fit in a coat pocket and
will work in places where you can't even find an outlet to plug
in your soldering iron.

>Not that I don't improvise... I snip the legs off the SMD device
>with a Dremel and glue down the new device on top of the old and
>solder in 30ga wires from the old pads to the new.. or use a
>DIP... or just toss it.

Yuck! What an ugly technique. Why not just properly remove the
SMD device and replace it with a new one? It isn't hard to do
the repair correctly. You've just got to get over the one pin
at a time fixation soldering irons tend to promote.

Gary

5487. amateur tcp/ip packet - how should it be done?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-19 00:00:00 UTC
From: df639@cleveland.Freenet.Edu
Message-ID: <549mdb$lnj@madeline.INS.CWRU.Edu>
Source record: 214500

First I'd like to thank and compliment those who have given so much
of their time and effort to developing the code base of amateur radio
software, especially those who've contributed to ka9q nos and it's
dirivitives. With the recent or maybe not so recent availability of
386 or better computers able to run windows or public unix varients
for $200-300 used (less if your patient) I've begun to wonder if it may
be time for the amateur tcp/ip community to move on and use more capible
and easier to setup/use software. for use as a server linux was easier to
install and setup than nos and I've had less (read NO) problems with
bugs under linux. NT is another solution for a packet server. For a
client Windows 3.x, 95, and NT have software available to bind the winsock
tcp/ip stack (ie trumpet) to your packet radio hardware. This allows
any application that can be run over the internet to be run over packet.
some that come to mind could be digital voice (linking distant repeaters
over packet), iphone; www (client and server) ; file transfer, ftp; remote
login, telnet n rlogin; irc, (chat); and others. the posibilities are
limitless. so where do we go from here, what should be done to bring paocket
into the 21st centuruy? I open this for discussion and would like to see your
comments posted here.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps - NEW INFO!

The URL to use is:

http://www.trucom.com/ppages/marty

I have just today (17 OCT) updated the pages to include a Frames Version that makes navigation around the site easier. Note that the non-Frames Versions are still there but the URLs have changed.

Thanks!

Take Care & 73

Marty Albert - marty@trucom.com

hi,

wir beginnen am Samstag, 26.10., um 19:30 Uhr, im FSK (Freies Sender Kombinat), unser erstes woechentliches Infoprogramm: DSCHINFO!

FSK teilt sich in HH seit Maerz die Frequenz 89,1 Mhz mit Deutschland-Radio Berlin und sendet taeglich zwischen 19:30 und 23:00 Uhr. Die erste halbe Stunde (zwischen 19:30 und 20:00 Uhr) verantworten autonome Infoteams, die nach gemeinsamen Uebereinkuenften eine taeglich wechselnde (Wort-) Informationssendung gestalten.

Da unser DSCHINFO-Konzept auch beim Inforadio angenehme Techno-Stoergeraeusche (simulierte Echtzeitsimulation) als akkustische Stilmittel vorsieht, werden wir nicht immer KLAR zu verstehen sein! Wer sich ueber fluechtiges Hoeren hinaus zu unseren Interviewpartnerinnen, Themen, dem DSCHINFO-Konzept, dem Dschin International Mixed Media Collective, CCC, FSK, U-Site uvm. informieren will, wird in unseren Sendungen auf Email-Adressen, Webseiten und weitere Medien verwiesen.

DSCHINFO wird im Oktober, November, Dezember 96 woechentlich eine halbe Stunde zu hoeren sein - im Dezember sind wir bestenfalls immer DIENSTAGS dran! Sollten irgendwelche kurzfristigen Termine, Orgahinweise o.ae. zum FUTKON13 (13. Futurologischer Kongress) auftauchen, koennen wir ausserhalb unserer Sendung jeweils Dienstags dazu Ansagen machen!

viel Spass, Euer DSCHINFO-Team

2. DSCHINFO - vormerken, weitermailen: Samstag, 26.10., 19:30

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #186 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 25-Oct:
-
1. Congress Mandates Reallocation of Frequencies at 2.3 GHz
2. ARRL Board Elections Continue, Several Divisions Contested
3. 200 kW Morse Code Transmitter Returns to the Air This Week
4. Special Event Station Calendar
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. FCC Antenna Tower Registration Deadlines Approaching
7. Texas Broadcast Tower Fails in Wind, Several Workers Killed
8. "The RAIN Dial-up" from Chicago
9. Supercomputer Pioneer Dies after Colorado Auto Accident
10. "Ancient Amateur Archives" with Bill Continelli, AB2CA
11. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace,
North Dakota, where "This Week in Amateur Radio" is heard on the
WA0ZOK repeater, serving Fargo, North Dakota; Morehead, Minnesota;
and the Red River Valley on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at

>
>There you go again, Carl, mouthing obscenities and name-calling as a
>sorry substitute for logic or anything like a cogent argument in support
>of your wild opinions.

Jim, "Bullshit" is NOT an obscenity ... it is, perhaps, a "mild
profanity" ... now asshole, that's a bit stronger, though still not an
obscentity, but it clearly applies to you ...

>Carl, what other hobby in the US has its own satellites?

Don't you DARE try to twist things around and make it sound like "you
and the majority of hams" had ANYTHING to do with the ham satellites ...
I haven't had a lot to do with them, but I did contribute to AMSAT, both
in money and by arranging the donation of a big block of RAM for the
AMSAT command and control station computers ...

You Luddites are the antithesis of groups like AMSAT, TAPR, and other
groups of experimenters who are involved with new technology ... so
don't you DARE try to use their work as representative of th majority.

>Because the main body of the
>hobby cannot afford the money or time investment required to tinker with
>the latest and greatest technology, does not mean there are not individuals
>within the hobby that do, or that those who cannot are indifferent to
>the efforts of the few. Your assertion that ham radio is stagnated, I
>suppose because some of us still use CW, is ridiculous.

Your assertion that "the main body cannot afford" modern technology is
ridiculous ... DSPs are cheap ... I've got a 100 MIPS worth of DSP in
a damned TELEPHONE ... they (DPSs) cost about $5.00 ... the fact is,
that you don't have a clue as to how modern stuff works, you don't
understand it's benefits, you fear it like crazy because of your lack of
understanding, and so you try to put it down and squash it and shove it
under the rug at every opportunity. What's worse is that you insist on
trying to drag everyone else down to your miserable level ...
and in doing so, you seriously harm the future of ham radio ..
>
>> .. and that's obviously more than your ego can allow you to accept ...
>>
>
>My ego doesn't stand in my way of accepting anything that makes good old
>horse sense.

You wouldn't know horse sense if the horse bit you on the ass ...

>> You can't continue to confuse the issue with your nonsense, Jim ... his
>> utterance of Morse Myth #1 is patently false according to any reasonable
>> engineering evaluation, and his opinion has NOTHING to do with it,
>> cannot change the facts, and he needs have his error pointed out to
>> him and to be refuted whenever he/you/they voice such inaccuracies, lest
>> even more people be as confused about technical reality as you are Jim.
>>
>
>I am not confused at all. I simply said, and will say again, that if from
>his perspective, CW is the best mode, then for him, his opinion is
>correct.

SO no matter how wrong one is, if they agree with you, they're right?
YOU'RE UNBELIEVEABLE ... totally out of touch with reality ...

>Show me where I have lied, Carl.

YOU lie virtually *every* time you post, you SOB ... you lie about at
least one thing I've said in every post, not to mention all the
falsehoods you glibly spread as if they were fact, just because you are
stupid enough to believe them ...

you just planting your head in the sand?

> BF>> Do not believe all what you read.

> So witty, so very witty.

Yeah, I'm a witty one. Too bad the same can't be said for you. Then your
posts might have some entertainment value. But as it is, they're just
plain stupid.

> BF>> Others may judge if I am stupid.

> BF>> If I repeat, I do so because of the demographics of my readership.
>
> DR>I don't think you know those demographics.
>
> Generally old fat white middle income.
> You disagree?

Depends on what you mean by "generally". Those aren't demographics,
strictly speaking, they're assumptions, and in the case of a vain, insecure
net.kook like you, they're attempts to belittle. And these "demographics"

don't explain your need to repeat yourself.

> "Takes one to know one", an original comment.

Sometimes the best wisdom is old wisdom.

Don't give me this crap. You splash it everywhere.

> DR>You recall it. You just don't recognize it for what it was.
>
> You cannot be as uneducated as you appear.

It figures that you would dismiss such an important (yet provocative) premise as "uneducated". Your ignorance is showing, ignorance of your very self.

> You are playing a role?
> The role of a pimple faced geek computer wizard?

Not really. But even if I were, I'd be a hell of a lot more convincing than you are with this white-trash macho tough-guy role you play.

> DR>Tough = conforming to a certain lifestyle/personality structure
> DR>designated as superior by one Burt Fisher, insecure weasel.
>
> I have a student that weighs 95 pounds who is as tough as they come.

So? My point stands.

> Weasel? Into child like name calling?

So, when I call you a weasel it's "child like name calling", but when you call hams "fat" or "wimps" or "pussies" it's somehow justified? Spare me these idiotic attempts to ennoble your self-righteous judgements. Also, it is not surprising that you use "child-like" as an attempt at an insult.

> DR>> The word pussy was invented to describe a ham.
>
> DR>Is this supposed to bother me?
>
> Are you a ham?

Aye. But a brain-dead trauma victim has a better grasp of reality than you.

> I cannot contain my excitement at turning you into pulp

Funny, I hadn't noticed any pulping emanating from your direction, just a kind of involuntary spastic drooling.

> thus ANY further message you send will be PUBLICALLY posted for ALL to
> judge.

OOOOOOH....I'm SO SCARED...jeez Burt, you really are pathetic. Is this the best YOU can do? Threatening to spam a private email exchange onto Usenet?

Are you really that lame and unimaginative? It didn't take nearly as long to get you to crack as I thought it would. But then, I guess it's not difficult to overestimate Burt Fisher.

Now, if you'd asked me (in any form) NOT to email you again, I wouldn't, because I would respect that request no matter who made it. But THIS? This inane threat? Unbelievable...

Go ahead, laughing boy. Do your worst.

The new motherboard, disk, Ethernet, etc., have been ordered. I expected to see them yesterday but it looks like the supplier didn't get things shipped Thursday as planned. I expect to see the hardware Monday. It will take another day or two to get the new system assembled and onto the network.

Jim (in [Prince George]) has already shipped me the disks out of the old server. [In other words, the old server will not come back on-line because the disks are now in Alberta, waiting for the rest of the hardware to arrive - AD1C].

Jim, could you post something onto Usenet about the status of the server? I only have read access to Usenet right now.

Or, perhaps, they're just not interested in that "digital stuff."
Personally, I've NEVER worked anyone who was younger than 50 on 160M.
That may or may not be unusual, but that's my experience.
On the other hand, the digital operators I've worked have all been
(relatively) young, have operated on the higher bands (40M+), and have
seemed relatively interested in exploring new means of communication.
And, more than once, I've carried on QSO's with the spiffy HAL card and
my IC-735 when CW was buried too far in the noise to be usable - with the
same ops using the same equipment.

- Rich

Burt Fisher (k1oik@ccsnet.com) wrote:

: I told you if you sent me ONE more message I would post it publically.

Indeed you did, for whatever bizarre reason.

: There is no ethic problem involved

Depends on your ethics. Yours certainly leave something to be desired. The ethical problem involved here is this: no one else cares. You're spamming newsgroups with email. Of course, I imagine many people here have given you a well-deserved place in their killfiles, so the impact on the ngs is lessened somewhat, but...what's the point? What are you hoping to accomplish here, Burt?

You're chock-full of ethical problems - witness your statements about the German people, and your highly neurotic need to inflate your own view of your poor pathetic self by putting others down (hams, for instance). I've been reading your crap with some sense of pity for you ever since you cursed us with your presence here. But finally I'd had enough, and I decided to take you on in email (I refuse to use a killfile). After an exchange or two you hastily moved to this "post all my email" tactic, perhaps in the misguided hope that it would embarrass me. Now, who's this "cry baby" you're talking about?

: Further I will post ANY other message you send me.

5497. Re: Drake R-4 vs. 4B, 4C ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-20 00:00:00 UTC
From: A Woodward <woodward@ix.netcom.com>
Message-ID: <01bbbe4d$bcaaf3e0$546ad6ce@alhome>
Source record: 214360
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

The Drake R4 and R4-B are essentially the same, with the R4-B having a few solid
state components in it. Both have variable and shiftable 50 KC IF's. The R4-B drifts
a little less on startup due to less tube heat. The R4-C uses selectable crystal filters
in the IF. Performance is virtually the same in all three as they all use the same front
ends. They all use a variable inductor VFO, 25 KC per dial rev, 1 KC markings, discernable freq readout to less than 200 Hz. Frequency drift on my R4-B is less than
700 HZ cold to full warm. After warmup, it never drifts more than 20 - 25 HZ.

In a nut shell, if you want shiftable IF, go with a R4-B. If you want the better skirts
of a crystal filter, go with the R4-C.

According to the bandplan, only the first and last frequencies are not
within the listing for simplex operation. Those two seem to fall in a
grey area.

The simple thing to do would be go talk with the guy and explain to
him what he has done. You make no mention of what has been tried so far.

When Japanese English became prevelant in the US HAM market,
that's when.
The tradional abbreviation for miucrophone has always been MIKE.
The Japanese did not knwo that, so introduced MIC.
Not that I'm anti-Japanese, or anything.

>more. When I was a kid of 12 (1950) it was truly thrilling to go to my
>cousins house (K4EUM) in Tennessee and watch as he talked to people all
>over the world. Kids today, for the most part, don't see anything
>"magic" in talking on a radio.

I don't think that the above statement is true. For one thing, there is no marginal cost in a DX ham conversation, unlike a long distance telephone call. Most internet communications are not in real time.

My experience has been that Ken is simply wrong on this one. And when kids are interested in ham radio, it is the possibility of talking nationwide and worldwide that has sparked that interest. Hence the importance of doing away with the Morse Code testing requirement, which simply frustrates young people, who perceive the requirement as pointless and regressive.

>replaced every 3 years, that's another matter.
>
>Comments?

Galvanized steel is more easily attacked by acids than by alkali materials. EMT is routinely installed in concrete and won't have any problems if dry. But acid rain can quickly attack it. If you install it so that water quickly drains away from it, it should last a reasonable amount of time. It won't last like heavy wall pipe, of course.

I've got outdoor EMT that's lasted 15 years, but I can't guarantee yours will. You want to round up the concrete at the base so that water can't stand there. And you want to make sure any water which gets inside the pipe can also drain out freely. The usual way to do that is to set the bottom 6 inches to a foot of the pipe in gravel and pour concrete above that. Water inside can then drain into the gravel and out into the soil. If you have a high water table, this won't always work, and you'll need to make other arrangements to drain out moisture inside the pipe.

Electrolysis can't occur without water, so the secret to making towers, pipes, or EMT set in concrete last is to protect them from standing water. The mere fact that they are in concrete isn't the issue. Concrete is more protective than soil, and often more protective than open air. Keeping them out of water is the key to protecting them.

You have to also be careful about allowing dissimilar metals to contact the galvanized material. Don't attach copper directly to steel for example. That joint will corrode quickly if it gets the least bit wet. Use a stainless steel intermediate clamp in a case like that.

Yeah. The world is so interested in amateur radio. That's why hams didn't
even find out that "National Amateur Radio Week" was earlier in October
until it was too late.

>Hence the importance of doing
>away with the Morse Code testing requirement, which simply frustrates young
>people, who perceive the requirement as pointless and regressive.

Please provide me with one single credible study which demonstrates
that the code requirement "frustrates" a statistically significant number
of young people and keeps people out of the hobby.

I believe that people are staying away from the hobby, but I do not
believe it is due to any code requirement.

Source record: 214375

My father, Walter G. Horn - i4MK, an OM pioneer of the radio in Italy and author of technical papers in QST and QEX, is writing a book about the beginnings of radioamateur transmissions in Italy.
Unfortunately, both ARI (italian branch of IARU) and Telecommunications Department are not able to provide any callbook of italian radioamateurs operating from 1935 to 1940 in Italy.
Such callbooks were destroyed during the II World War.
He would be happy to have OMs' assistance in looking for them.
He firmly believes such a callbook could be traced, perhaps as a part of international radioamateur callbooks of that period, in USA, so the aim to complete his laborious compilation could be attained.
Thanks in advance. 73 & 51.

Youthnet NEWS 017 10/20/96
Alexis Leynes N9KYJ

I sent the first survey two years ago. This is the update that I long promised. I hope that this survey will have a few more responses. The purpose of this survey is to see where the youth in amateur radio is going, and coming from. Hopefully this will give us an insight to where the future of ham radio is going.

1. What made you interested in Ham Radio?
2. Why do kids want to be hams?
3. Are you more interested in building ham equipment or using them
4. Are there ham clubs for young hams in your area?
5. What would young hams like to see more of in amateur radio?
6. As a young ham, do you think that you are well represented in national or local ham organizations?
7. What do you talk about with the adults on the air?
8. Do you feel that adults are ignoring you?
9. Is the testing requirements easier or harder for you? What do you want to seem more in these tests?
10. How do you think is ham radio helping you in your everyday life?
11. If you have parents who are not in the hobby, are they supportive?
12. What aspect of amateur radio are you interested in (voice, CW FM, AM, SSB, HF, VHF, UHF, ATV, Packet, Fax, DX, Contest, Special Events, biking, hiking, etc...)?

If you have any additional comments, or added suggestions, please include it in your response. You can send your responses to my E-mail address, YouthnetNEWS@worldnet.att.net or you can send me mail at my callbook address. If you have time you may want to drop by Youthnet NEWS OnLine at "http://www2.uic.edu/~aleyne1".

Youthnet NEWS is an amateur radio informational service for the young radio amateur operator. All rights are reserved 1996. Re-prints of this survey may be reproduced as long as the original material is not edited in any way shape or form.

In response to Ed's question...

YES it is! But we do need to make it clear to Washington D.C. if we
hope not to lose any more frequencies. It appears that the loss for
frequencies is increasing at an alarming rate lately.

9N, NEPAL. The ARRL DX Bulletin reports that Jack, W4OSN, will be active as 9N1OSN from Kathmandu on 80 through 15 meters from October 14 to November 28. He will be using a solar powered Ten-Tec Scout.

A35, REP. OF TONGA (UPDATE). Paul, A35RK, reported to OPDX that Bob, W7TSQ, arrived in Ha'apai on Thursday (17th). He brought a Cushcraft R-7000+ vertical and a Force 12 C-3S. They got the R-7000+ up Friday, and reported "it's working very well!" They are waiting for mast material to arrive on the ferryboat, and the C-3S beam should be operational by next weekend. At the moment, Bob is signing A35SQ and is active on 80-10, mostly SSB; while A35RK (Paul) is active on CW; both from same QTH: Lifuka Island, Ha'apai Group (IOTA OC-169). QSL both via W7TSQ. Bob is "tuning up" for CQWW-SSB Contest, so you'll hear him alot. Also, Marcel, A35DM, left for Vava'u Friday and he should be active from IOTA OC-064 by the time you read this (SSB only). QSL via ON4QM.

BY, CHINA. Mike, W5ZPA, Delta Division Representative DXAC, will be going to China and will operate W5ZPA/BY1QH, October 22, 23, or 24th, depending on the station manager for the university club station.

DU, PHILIPPINES. Andy, G4ZVJ, plans to be active from October 25th to November 6th, as DU3/AH8F from Bataan, Philippines. Activity will be mostly CW. QSL via G4ZVJ. (Home page: www.g4zvj.demon.co.uk/du3.htm)

DXAC NEWS. Southwestern Director Fried Heyn, WA6WZO, has appointed Vince Thompson, K5VT, to the DXAC. (ed. As a member of the DXAC, I would like to welcome Vince aboard.)

QSL NEWS AND INFORMATION....
Bart, K4CEF (member of the DXAC for the Southeastern Division), reports the following: "Chris, ZS6EZ, reports that the ZS8IR cards have finally been printed and are being shipped to him. He also has full logs on his computer. The first batch will go out in about 2 weeks, and he will then proceed to work down the remaining cards in batches, roughly corresponding to the month in which they were received. Those few that sent registered mail will be in the back of the queue, and will get answered with the bureau cards-- Chris has to take leave and drive to the post office (about 15 miles) during office hours to collect the registered mail."

Eugene, RN9XA (ex UA9XAC, R9X), from Syktyvkar, Russia, states there have been problems receiving QSL cards from USA QSL bureau. His new callsign is RN9XA (prefix RN9 - Asiatic Russia, not - UN). He has been active in 1996 as many special stations from the Komi Republic: UE9XAA via UA9XC (OK via CBA or BUREAU), UE9XAC via RN9XA (OK via UA9XAC's CBA or BUREAU) and UE9XAD & UE9XYW via RA9XF (OK via CBA or BUREAU). His home adress: Eugene V. Bugrimov, RN9XA, P.O.Box 1229, Syktyvkar 167001, Russia. E-mail address: rn9xa@ampr.komi.ru

Maria, ZS1AFZ, reports to OPDX that her new QSL address is: ZS1AFZ via KU9C (direct only SASE) to: Steve Wheatley, 12 Netherton Terrace, Morristown, NJ 07960, USA -or- Steve Wheatley, Box 5953, Parsippany, NJ 07054, USA. Steve does have an e-mail address: ku9c@aol.com

Juraj, OM2SA, indicated that he still has the log and QSLs for AP2MY, operated by N9NC in CQWW/CW 95, and +/- some days of this date. If anyone still needs a QSL, PLEASE send to Juraj via the bureau or direct to his address: Sipos Juraj, OM2SA, 93013 Trhova-Hradska 550, Republic of Slovakia, Europe.

T8, REP. OF BELAU (ATTENTION PREFIX HUNTERS!). Jim Hood, WV5S, President of the Oklahoma DX Association has informed the DX/Contest community of the following statement: "In 1994, Belau (Palau) declared its independence from the USA. Consequently, the KC6 prefix needed to be replaced by a new unassigned prefix. The prefix T8 has been assigned to Belau.
Oklahoma DX Association members N5OK and N5CG have now activated the T8 prefix for the first time as T88T. They will be using this call in both of the CQWW Contests. QSL to Box 88, Morris, OK 74445-0088."

V47, ST. KITTS. Andy, G4ZVJ, and Ken, G4RWD, will be active November 15-25th, as V47VJ and V47WD. This will include activity in the CQWW CW Contest as V47VJ on: 1827, 3503, 7003, 10107, 14027, 18077, 21027, 24897 and 28027 kHz +/- QRM (QSX up). This is a low-key vacation operation to

activate the multiplier.

-=-
More Information and Stations to be active in the CQWW SSB DX Contest
-=-

KH6BZF SPECIAL PROPAGATION REPORT for the CQWW SSB DX Contest for the weekend of October 25-27th. DX contesters will make the bands highly active and it will appear that bands and paths normally thought to be closed, open up and surprise you.
On the first evening propagation will be slow as we should be recovering from an active GEOMAG period. So, work those Asia and Oceania areas the first evening. While on the 27th (Sat/Sunday), the bands are expected to be better. Last year at this time Solar Flux was in the mid-to-high 80'. This year the mid 60's to low 70's will be the norm. Note, band will close earlier and open later than last year. CU on the bands.
Remember: Have fun.....KH6Bloomin'ZipperFlipper

3C1, EQUATORIAL GUINEA. Teo, EA6BH, and others will be active as 3C1DX in the contest. Their activity has been cut short/delayed due to the work stoppage in France's airports. They hope to be active from October 24-31st.

5T, NIGERIA. Pat, 5N0T, will be signing 5N36T as a Single-Op all band entry in the upcoming contest. The special prefix will be used until October 31st to celebrate the 36th Anniversary of Independance of the Federal Republic of Nigeria. QSL card as usual via Paul F2YT.

7P8, LESOTHO. The DXNS report Wolf, OE2VEL, will be active as 7P8EL in the contest, and before/after with CW on WARC bands. QSL via OE2DYL (direct or bureau).

8R, GUYANA. Olli, OH0XX, will operate 8R1K in the contest as a Single Op all band entry. QSL via Suite 599, 1313 So. Military Trail, Deerfield Beach, FL33442, U.S.A.

9Y, TRINIDAD & TOBAGO. Glenn, K6NA, will activate 9Y4H on all bands in the contest this year. Glenn states, "Yes, I do QSL although I am a bit behind...Please don't send second requests, you WILL get your card! About 2,000 will go out early December. Thanks! Glenn K6NA".

A4, OMAN. Tony, A45ZN, will be acive as a Single Op in the contest. He states 6 and 30 meters operation is not allowed in A4, but Tony thinks there is a chance of some limited 6 meters operation soon. QSL direct.

CY0, SABLE ISLAND. Just before going to print OPDX received the word that the CY0 team will be using CY0XX as a Multi/Multi entry in the contest. The team will be active from October 21-29th. There will be a total of 5 operators with an operation planned on all bands including RTTY and 6 meters. Refer to last week's OPDX.274.

C3, ANDORRA. Look for activity by either C31LD or C31LJ. If C31LJ is active in the contest, the entry will be SO/AB. If C31LD is active, it will be a Multi/Single entry. QSL for C31LJ is via VE3GEJ. C31LD is looking for a manager. (VE3HO has volunteered, but final arrangements have not been made. Query the station before you send a card.)

CT3, MADEIRA ISLANDS. Look for Martin, DL4NAC, as CT3FN in the contest. Look for CT3FN during the following times/frequencies: 28450 kHz - 1200z, 21350 - 0900/1500z, 14250 - 1100/2000z, 7050/7300 - 1800/2100z, 3750 - 0700/2130z and 1850 - 0200z. QSL via HB9CRV.
Also, look for Jukka, OH6LI, as CT3/OH6LI in the contest on all bands.

FJ5, ST. BARTHELEMY. Operators (so far) N6DLU, N6LL, FJ5AB and some others will be active as a Multi/Single entry from this Caribbean island as FJ5AB. QSL information will be posted later.

FK, NEW CALEDONIA. Look for the special contest call FK5DX in the contest. Operators ERIC, FK8GM, and Franck, FK8HC, will operate on all bands, 160-10 meters (as conditions allow). QSL for FK5DX via WB2RAJ.

HC8, GALAPAGOS ISLANDS. Look for HC8N to be a Multi/Single entry activated by WN4KKN, WX3N, VE3EJ, and HC1OT. They suggest looking for them on 160 meters around 1.840 MHz CQing on the half hour between 0600-1100z and on 75 meters anytime during the night. They may be operating split. For JA they will make special attempts to listen split--especially around 3752 kHz. On 40 meters, 20 meters, 15 meters, and 10 meters, they should be easy to work. QSL via AA5BT.

M6, ENGLAND. The gang at G0KPW have decided to make use of the new UK contest callsign facility and will be signing M6T this year, Multi/Multi.

NH2, GUAM. Gary, NH2G, (in Zone 27) will participate as Single Operator, All Band entry in the contest. QSL via WF5T. Just a reminder for those 40 meters SSB operators, U.S. terrorities in ITU region 3 (KH0/KH9/KH2) can only operate SSB 7075-7100 kHZ!

P4, ARUBA. Jose, CT1BOH, will be active a P40E as Single Op All Bands entry. By the time you read this, he should already be on the air. QSL via CT1AHU.

TK, CORSICA. Members of the Bavarian Contest Club will be active as TK2C as a Multi/Multi entry in the contest. The following bands will be activated by the following operators: 160m - DL4MCF, DK4VW; 80m - DL1MAJ; 40m - DL4MEH, DK6WL; 20m - TK5NN, TK5EP; 15m - TK5MH, DF7RX; and 10m - DL6RAI. QSL via DF7RX, Bernhard Steibl, Kelheimwinzerstr. 40, D-93309 Kelheim F.R.G.

TL, CENTRAL AFRICAN REP. Stefan, TL8MS, in Baboua, will taking part in in the contest as Single Operator with activity mostly on 7, 14, 21 MHz. QSL cards via bureau, or QSL Manager DL6NW.

V85, BRUNEI. Hajime, JO1RUR, will operate V85HG in the contest as a Single Operator/Multi-band entry. QSL via JH7FQK (CQ WW SSB 1996 only).

VP2E, ANGUILLA. Robert, WB5CRG, will use the callsign VP2E for a 14 MHz single band effort in the contest. Robert states other S/B efforts may pan out with OTHER callsigns depending on antennas. There will be no 15 meter antenna up this year. QSL via WB5CRG's CBA for the contest only.

XX9, MACAU. A press release from Martti, OH2BH, (provided by Warren, KF7AY) indicates there will be a Multi/Multi effort by XX9X in the contest. Here is the press release: "The South China Sea DX Team officers have noticed a planned American assault on Bangkok, Thailand. To rebuff and challenge this foreign invasion, another Asian multi-multi operation will be staged with the ARM - The Amateur Radio Association of Macau.
Activity will begin Wednesday, October 23rd, and continue through Monday, October 28th. October 26 & 27 will be a multi-multi entry in the 1996 CQ WW SSB DX Contest.
Five Yeasu FT-1000MP stations, with all necessary firepower, will be on all bands from Taipa Island, Macau. Cushcraft has supplied four beams that will be energized from two luxury hotels located side by side.
The operators and supporters of this undertaking include: OH1KAG, OH2BH, OH2BVF, OH2PM, OH6DO, XX9AL, XX9AS, XX9KC and XX9MD. The following frequencies may be worth watching: 1.827, 7.047, 21.270, 14.170 and 28.470 MHz. Special event QSL cards will automatically be sent out for all QSOs. Direct requests may be made to: Martti Laine, OH2BH, Nuottaniementie 3 D 20, FIN-02230, Espoo, FINLAND, Europe

YV, VENEZUELA. Kenny, WM2C, will participate with YV-operators in a planned Multi/Single entry in the contest from the island of La Orchila (IOTA SA-054) off the coast of Venezuela. They hope to use the callsign YV10M (YV-one-zero-M), but if not, they may be on as YV5A or 4M5X from the mainland.

ZL, NEW ZEALAND. The Kiwi Contest Group will be active as ZM2K in this contest as well as the CQWW CW Contest.

ZS8, MARION ISLAND. Reports indicate Chris, ZS8IR, has announced that he will be active in the contest as an all band entry. He hopes to make many people happy during the contest. He will put up his Battle Creek Special antenna for that extra help on the low bands for this rare multiplier!

Not in this part of the country for well over 10 years.
We have repeater inputs on:

147.415
147.430
147.445
147.460
147.475
147.490
147.505
147.595

It's even documented in the ARRL repeater directory in the bandplan
section.

Well, I don't know. If the kids are really young, I'd agree with you.

But I think we also want to attract people who will eventually become
technologists and engineers. How many high-school and college aged
"kids" with a technical background (and I'm not just talking electronics
or software) would get "wowed" by HF DX vs the latest applications on
internet? Furthermore, what percentage of today's young technical people
are AT ALL interested in amateur radio vs people from that same age
group (and technical bent) 30 or more years ago?

Should amateur radio be made more attractive to such people?
Is so, how can we do that?

Wonder why everyone ignores the limitation of the speed of digital modes:
The typing speed of the operator who initiates a message?

RTTY has been around since the war years yet it never came into the
forefront of amateur comms. Maybe most folks aren't all that interested
in greater "spewput."

DIVISIONAL NEWS
The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

WANTED (ALIVE): VOLUNTEERS FOR THE BROADCAST ROSTER
We urgently need more people on the broadcast team who are prepared to be rostered on to do the evening broadcast. At present, we have seventeen people who are willing to help in the morning, four who will help either in the morning or the evening, and six who wish to be rostered evenings only. It does not take many fingers and toes to realize that, whilst the morning roster means people only need to come here about five times a year, the evening roster comes round once a month! If you would like to be trained either as an announcer or as an engineer or both - you don't have to have a call sign, as there is always one person rostered on who has a full call, please would you contact Pixie VK2KPC at the office between 10.30 and 15.30 hours Monday to Friday, or leave a message at any other time. We will accept people for the morning roster, but we really need ten or twelve more people for the evening roster, so that everyone gets a fair go. How about it, folks? Can YOU help? WILL YOU help?

The next examinations will be held at Amateur Radio House Parramatta on Sunday 3rd November 1996 Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the oftice for the necessary forms. Applications close on Thursday 24th October. Acceptance cannot be guaranteed for any applications received after that date.

--submitted by Eric Fossey VK2EFY - Divisional Secretary.

WICEN NEWS
Graham Dalglish VK2DIG, the Sydney South-West RCO, advises that he has information on conversions for the Motorola Syntor, the Plessey 8000, the Phillips 828/E, and the AWA RT-85 for WICEN purposes; unfortunately, his fax was rather too long to appear here, but it will appear in the WICEN newsletter. In the meantime, we advise that he has just five photostat copies of the Motorola Syntor manual for just $5 plus $5 postage; this includes a suggested band-plan, and a method for by-passing the DVP and CTCSS. Also available for a floppy and return postage is a programmer and EPROM files for the Plessey 8000. Please contact Graham for further information, or wait for the newsletter.

Next weekend is the "Hawkesbury Classic Paddle", run as usual by Kevin VK2CKD; Kevin will only be too pleased to hear from those who wish to assist on this overnight exercise, which consists of canoes being paddled down the Hawkesbury river (by presumably sane people) under the light of the full moon. The safety of these paddlers is paramount, and WICEN deploys an extensive communications network -- both voice and data -- for this event. Briefing notes have already been posted, so if you haven't received them then please advise Kevin as soon as possible.

Next month is the Oberon Car Rally, to be held on Saturday 2nd November; the event co-ordinator is Neil VK2XNF, and presumably further details will be forthcoming in due course.

Those regions wishing to have their activities publicised on this broadcast are requested to have the details with the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2KFU@VK2KFU (AX.25) or vk2kfu@gw.vk2kfu.ampr.org (TCP/IP).

Fax is acceptable, to (02) 9922-5286, for the attention of Dave Horsfall, but they are likely to be summarised; e-mail is also acceptable, to dave@fgh.oz.au.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS
PHASE 3D LAUNCH PENCILED IN FOR MID-APRIL
The launch of the Ariane 502 that will carry AMSAT's Phase 3D amateur satellite aloft has been tentatively set for mid-April 1997. That announcement came recently from Jean-Marie Luton, Director General of the European Space Agency (ESA), and Alain Bensoussan, Chairman of CNES (the French Space Agency), during a joint ESA-CNES press conference at ESA Headquarters in Paris. Other payloads include a pair of technological measurement packages for validation of the launch vehicle's ability to place two satellites into a geostationary transfer orbit.

The press conference also outlined the two agencies' respective plans to correct deficiencies in the Ariane 5 launch vehicle, in response to a report submitted in July by the Ariane 501 inquiry board that's been looking into the loss on launch of the first Ariane 5 booster in early June. In their announcement, Luton and Bensoussan outlined several specific actions that ESA and CNES are taking to assure the correction of software contained in the Ariane 5 inertial reference system. Software errors were cited as among the primary causes of the Ariane 501 failure. Other changes will mean that all of the launch vehicle's software will be subject to qualification reviews in which outside experts will take part.

AMSAT-NA President Bill Tynan, W3XO, confirmed outside reports that the launch delays will cost AMSAT-NA and AMSAT-DL approximately $300,000. AMSAT originally had budgeted about $4.5 million for the construction, launch and operation of the AMSAT Phase 3D satellite. It's now seeking additional contributions to help pay the extra costs associated with the launch delay.

--AMSAT News Service and the ARRL Letter dated 11th October 1996

PRESIDENT CLINTON RECOGNIZES AMATEUR RADIO
President Bill Clinton sent greetings to Amateur Radio during the week leading up to the October 12-13 Simulated Emergency Test. The President's greeting referred to the week as "Amateur Radio Week." The White House faxed a copy of the president's message to ARRL member Darlana Mayo, KB2EPU, of Mt Vernon, New York, who's been working with the White House for several months to get the acknowledgement. Mayo said she wanted the president to "be aware of our value to the community--particularly in emergencies." Mayo--a ham for 10 years--is a member of ARES and RACES, and serves as an assistant director and an assistant emergency coordinator in the Hudson Division.

Here's the text of the White House statement, which was signed by President Clinton:

"Warm greetings to everyone observing October 7 through 13, 1996, as Amateur Radio Week.

"In the past century, the medium of radio has changed the way we live and the way we view our world, and Amateur Radio operators have played a vital role in this communications phenomenon. Sharing knowledge and technological expertise, connecting computers via radio equipment, and linking people all across the globe, ham radio operators have helped to make our world a true global village. But even more important, they have provided a crucial lifeline of relief in times of disaster and hardship, ensuring that hope and help are on the way to those in need.

"Amateur Radio Week offers us a welcome opportunity to thank our nation's amateur radio operators for their commitment to excellence and their willingness to work for the well-being of others.

"Best wishes for a wonderful week."

--ARRL Letter dated 11 October, 1996

HORNSBY AND DISTRICTS AMATEUR RADIO CLUB INC.
This weekend is JOTA. translated Jamboree Of The Air, and the H,A.D.A.R.C. members are operating several JOTA Stations at various

locations, and extend their THANKS to all other Stations participating, as this all helps promote Amateur Radio.

The next meeting of the Club is the monthly meeting on the 22-10-96. After the meeting the Annual Trash & Treasure sale will take place.

The venue:
The Mt Colah Community Centre,
Pierre Close,
Mt Colah.
(Near the Eastern entrance to the Railway Station.)

We would like to see you at one of our meetings or hear from you either by Mail or Phone.

Postal Address H.A.D.A.R.C.
P.O. Box. 362.
Hornsby 2077.

Phone the Publicity Officer: John VK2WRT.
Phone number (02) 9807-2490.

Remember the Club Net on Monday nights, on the Repeater VK2RNS Freq. 147.250 with a positive offset. ALL ARE WELCOME.

-- John VK2WRT the Publicity Officer.

TAMWORTH RADIO CLUB HOLDS ITS MEETINGS ON THE FIRST FRIDAY OF EACH MONTH COMMENCING AT SEVEN THIRTY PM IN THE SOCCER ROOMS, JEWERY STREET, TAMWORTH. GUESTS ARE ALWAYS WELCOME AND TEA AND COFFEE IS PROVIDED. THE NEXT MEETING WILL BE ON FRIDAY THE FIRST OF NOVEMBER. THIS WILL ALSO BE THE ANNUAL GENERAL MEETING. IF YOU WISH RO STAND FOR A POSITION ON THE COMMITTEE THEN PLEASE COMPLETE A FORM AND GET IT TO THE SECRETARY BEFORE THE COMMENCEMENT OF THE AGM.

NEXT SUNDAY, THE 27TH OF OCTOBER, WILL BE THE COMMITTEE MEEETING AT THE USUAL VENUE. KATH HAS ASSURED ME THAT HER FAMOUS SCONES WILL AGAIN BE SERVED AND THESE MAKE THE MEETINGS REALLY WORTH ATTENDING.

IF ANYONE REQUIRES MORE INFORMATION ON THE CLUB PLEASE CONTACT DAVID VK2ICY OR SHARON VK2SHA ON 067 622466 DURING WORK HOUS OF 067 691539 AFTER HOURS AND WEEKENDS.

-- Sharon Margery VK2SHA, Publicity Officer

MID SOUTH COAST AMATEUR RADIO CLUB INC.
THE NEXT QUARTERLY MEETING OF THE MID SOUTH COAST AMATEUR RADIO CLUB INC. WILL BE OUR 20TH ANNIVERSARY MEETING AND WE ARE HOPING TO SEE MANY OF OUR PAST MEMBERS AND FRIENDS TURN UP TO DO A BIT OF REMINISCING.

THE MEETING IS AT THE USUAL PLACE, HANCOCK'S RANCH,
LITTLE FOREST ROAD, MILTON AND WE START ROLLING UP AT
ABOUT 1030 HOURS.

BRING YOUR LUNCH OR MEAT TO BARBECUE. WE PROVIDE TEA
OR COFFEE AND AFTERNOON TEA. LOOKING FORWARD TO
SEEING YOU THERE ON SATURDAY 2ND NOVEMBER.

-- DAVID VK2CX, HON SECRETARY.

GLADESVILLE NEWS
HELP WANTED WITH SSTV SOFTWARE.
The Gladesvllle Amateur Radio Club Inc. has received a request from an Amateur visiting our country for a copy of the software for a Slow Scan TV programme.

Our Visitor is 'Yank" ZS6JH - who has acquired a SS TV package but has found that the disk of software has a problem. The further complication is that he is unable to get any help from the supply source with a replacement disc for the PAL format as they are apparently now only supporting the NTSC format.

"Yank" would like to make contact with anyone having the following system. An Amiga Computer operatIng with the A V T modem - SSTV - PAL - version - V 3.6 - with the idea of getting a disk copy of the operating software.

If any listener can help please get in touch with the Gladesville Amateur Radio Club by Telephone after hours or leave a message on the answering machine - 02 9427 0530 [repeat]

--Keith VK2ZZO, President and ATV Coordinator

THE AUSTRALIAN AMATEUR TELEVISION CLUB INC.

EXISTS PLEASE CONTACT BOB BARNES FOR MORE INFO - THIS IS
AN AATC/AMATEUR/JOTA DAY

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED
TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes. VJ2R

Members of the Eastern and Mountain District Radio Club invite all
amateurs and short wave listeners to put Saturday 2nd of November on
your calender, On this day at 11:00 am est, we will launch a radio beacon,
for this launch the payload will consist of a 2m FM transmitter, which
should rise to about 65,000 feet. There are two modes to listen for, first is a
20 second digitised voice mode, giving out internal and external
temperature, flight time, attitude and background radiation count. Then
there will be a 10 second burst of high power for the packet mode, the
same information will be on packet plus the battery voltage reading. Also
going as part of the payload will be a 6m FM receiver which will listen for 30
seconds each minute, signals received during this time will be re-
transmitted on 2m, This should give interstate six metre operators a chance
to work each other via the balloon, previous launches have been received
over 800km from the transmitter. Just a few hints if you intend to monitor
the balloon: It is only 6m in there is no 2m receiver on board, if you are
monitoring the packet please disable your beacon to avoid embarrassing
yourself.

So the launch date is: Saturday 2nd of November, time: 11:00 am est., 2m
frequency is: 144.250 MHz, the 6m frequency is yet to be published. Our
club will have a control station that will have a call in on 20 and 40m.
For more information regarding this experiment please contact the club
President Jack VK3WWW at home on 03 9873 2458.

COMING EVENTS

Jamboree on the Air (JOTA ⁄96).....Ends today
WIA affiliated clubs net (after evening broadcast).....Today
Asia-Pacific Sprint.....Today
Divisional exam applications close.....Thursday

Gold Coast ARC Hamfest 96.....9th
ALARA Contest.....9th

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is
especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

BROADCAST ROSTER
Next Sunday, 27th October

Yup. Some state repeater ass. are putting repeaters on simplex freq's.
Michigan has one on 146.500. It's a repeater where the mechanical id
is the one heard the most. Thats because most of the people operating
on it seem to be unable to comprehend rules like station id. If you
complain about it you are the one made to feel out of place. The
F.C.C. and the ARRL ignore the violations and say profanity is ok,
sorry but we can't do anything. I will venture an opinion why this
is. The people in charge of this type of this thing are unable to see
any other view as having merit. Never heard of anything they didn't
think of I guess.

Sounds like the ham population is getting younger, not older. Seems to me
most hams would age 4 years in a 4 year period, not 3. Maybe they put something
in the water in Finland ?

Society.

A.N.A.R.T.S. News Bulletin 930 12 October 1996

Cols Column

There is no column this week due to the length of the contest
results. I would like to thank Jim VK2BQS for another great
effort in checking and collating all the logs that have come
in. Sadly as you will see Jim has missed out on an award
himself. Never mind Jim, there's always next year.

A.N.A.R.T.S. World Wide Rtty Contest Results

The winners in each section have already been published in an
earlier broadcast. this list contains the full placings in
the World in each section. The first column shows the WW
placing in each section. The end column shows the placing in
the contestants own country or State.

A more detailed list will appear in messages sent on the Packet
system World Wide and will contain the following extra info :

QSO Points, Multi's, Continents, and VK bonus Points.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(04 OCTOBER - 10 OCTOBER)

ISSUED ON 11 OCTOBER 1996

SUMMARY
Date 04 05 06 07 08 09 10
10cm 69 69 69 68 68 68 68
A 6 3 4 4 9 17 (11 estimated)
T -4 1 7 5 0 -2 -16

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 5TH TO 7TH OCTOBER; QUIET TO UNSETTLED 4TH, 8TH AND 10TH; AND UNSETTLED TO ACTIVE ON 9TH OCTOBER. THERE WAS ALSO A BRIEF ACTIVE PERIOD LATE ON 8TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES, WITH FREQUENCIES 15 TO 30 PER CENT DEPRESSED AT TIMES ON 9TH AND 10TH OCTOBER. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 4TH TO 7TH.

FORECAST (11 OCOTBER - 17 OCTOBER)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED. POSSIBLE ACTIVE LEVELS ON 17TH.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES WITH POSSIBLE DEPRESSIONS TO 20 PER CENT ON 17TH.

COURTESY OF IPS RADIO AND SPACE SERVICES

RTDX1004 RTTY DX
VK2SG RTTY DXNOTES FOR WEEKENDING 4 OCT. 1996 (BID RTDX1004)

There was a tremendous amount of activity, this past weekend, in the WW RTTY Contest sponsored by CQ Magazine and the Digital Journal. Some reported uncommon callsigns and interesting frequency occupancy not normally seen are listed below. (28-29)

Our information this week came from DJ3IW and the Central Europe DX Cluster DB0SPC, I5FLN and the IK5PWJ Packetcluster, the OH2BUA WebCluster, W5KSI, WB2CJL, OPDX/BARF80, AA5AU and the Digital Journal, and the Minnesota DX Packetcluster Network.

Thanks to all.

Notes of Interest:

TUNISIA, 3V - Fresh from a rest in England following the TY1RY operation, Eddie, W6/G0AZT will operate RTTY from 3V8BB 9-13 October. 80-10m. QSL direct only, to P.O. Box 5194, Richmond, CA 94805 USA.

WALLIS & FUTUNA IS., FW - Look for FW/DJ2EH, FW/DJ4OI, and FW/DL8NBH between 22 October and 4 November. They will be active on 160-10m including the WARC bands on CW, SSB and RTTY.

For next week's bulletin send your bandpass and notes of interest to Luciano, I5FLN(at)ZS5S.ZAF.AF

Andrew calls it Radiax (sp?) - but leaky coax alone, even with an antenna on one end rarely provides the neccessary coverage. Usually some form of transmitter is required: either a bi-directional amplifier (read expensive) or a set of low-power repeaters (read limited discrete channels available) is installed on the end of the leaky cable that is exposed to "the real world (tm)."

The Mobile Radio Technology Article on Boston's system is a pretty good primer - (May 96 issue??) but the article sounds like Boston was the first place to do something like this. Hardly! Possibly they have one of the largest based on the number of frequencies, including Lo-band, Hi, UHF, and 800.

If it is microwave, I suspect it is pretty directional. However, I
suspect that it is microwave....

Actually the helicopter in Portland Oregon uses a diection microwave link
to transmit it's TV and FLIR (Yes, KGW has FLIR-Incredible but true)
They even have a big website about the helicopter including the type of
microwave link

http://www.kgw.com

They probably bought the equipment at a bargain-basement price from some
military electronics contractor whose main business is drying up due to
budged cuts. I'm sure the development of this stuff was paid for by the
military, it would be far too expensive for someone to develop just for
the commercial market.

5547. Re: Oops: Re: Receiving traffic helicopter signal:

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-21 00:00:00 UTC
From: Armando Stettner <aps@ieee.org>
Message-ID: <326B86A8.4A6A@ieee.org>
Source record: 214264

A friendly net'er sent me a message saying "\"real time\" (not slow scan) and non-compressed video from a helicopter is going to be microwave."

He went on to say "While it is possible to use Omni-Directional antennas - usually TV stations/networks use highly directional antenna systems, usually employing tracking technology."

I was surprised at the comment on tracking technology so I gave a call to a few TV stations' engineering departments (one who had a helicopter with live feeds) and got the following info:

They do use microwaves.

The helicopter typically uses an omnidirectional antenna.

Using lat/long from the helicopter's LORAN (I asked about GPS and they don't use it, yet), a ground station (one of several a given station has/operates) antenna array is pointed toward the helicopter.

When I asked him about moving helicopters (the infamous bronco following helicopter in LA, for example) he said that an alternative is to have another stationary helicopter relay the signal.

The info above is only as good as the source.

Hope this helps and thanks for the mail, Tim.

armando.

5551. RS-10/11 Help

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-21 00:00:00 UTC
From: Fraser Bonnett <bonnettfq@corning.com>
Message-ID: <326BA92B.7051@corning.com>
Source record: 214268

Anyone with RS-10/11 experience:

I am having no luck working RS-10/11. I'm using a dipole for receive and can hear the beacon with no problem. For the uplink I'm using an old ICOM 2m all mode running 15 or 100 watts (I've tried both) into an M2 EB-144 eggbeater antenna.

When I try to send cw on the robot uplink I hear nothing on the downlink frequency. When I just try to send "dits" somewhere in the cw passband still I hear nothing.

The radio receives local packet FM and SSB on this antenna, and it has the ground plane option which is supposed to enhanced the signal pattern straight up.

a) Is my power too low or too high?
b) Is there another satellite with a 2m VHF downlink I can listen for, to test the antenna?

Any help would be appreciated.

Fraser N3VSM bonnettf@vicon.net

5552. Contesters

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-21 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <845893159.AA07533@hamlink.mn.org>
Source record: 214269

With reference to recent comments about contesters, the following old gem came to mind.
- -
With apologies to Darwin, it's obvious that ham radio has three distinct classes of people, each with its own evolutionary destiny:

1) Hard core contesters who will evolve into godlike non-corporal beings who rule the universe (except for those who work only phone contests).

2) Contester wannabes who try to pass as knowledgeable but secretly lurk and copy 2 or 3 exchanges to get the call and serial number before attempting their own exchange. This group will gravitate toward jobs as high school principals and operators of pet crematoriums. Eventually they will become extinct.

3) Non-contesters who will grow tails, sit in zoos and fling dung at tourists, while chanting "Please QSY -- there's a net down 10KC and it's been there for 40 years."

73, de Hans (Grinning, Ducking, and Running)

Sorry, Carl, if the government simply isn't up to where you think it is
"supposed" to be, but that's the way our legal system works. If you don't
agree, tough.

And you have the nerve to accuse me of lying! I advocate public service. Fortunately, we don't need to provide emergency service until there is an emergency. Didn't you know that? Hams are always there when an emergency service is needed. In between emergencies (as I said and you ignored) ham radio reverts back to its hobby persona. Why do you try to twist what I say? Is it because you cannot come up with an honest answer?

Tsk, tsk, tsk. Try brushing with Ivory Liquid, Carl. Blustering is a poor substitute for logical argument. Can't come up with a cogent argument, I guess.

> You Luddites are the antithesis of groups like AMSAT, TAPR, and other

>

So you feel the only "real hams" are the members of AMSAT and TAPR, etc. A very elitist, bigoted attitude. Are you saying then, than none of the members of these organizations is pro-code? How do you know that? Carl, let me explain to you what a "Luddite" was. A Luddite was, "One of a group of early 19th century English workmen destroying laborsaving machinery as a protest." Pro-code advocates are anything but Luddites. Your bigotry is showing again. Code testing is a technology-neutral issue, can't you see that? There are engineers on both side of the debate, and that fact does not prove either case. The fact is, pro-code advocates are for all kinds of technological progress, especially that involving the radio art and science. Despite your slanderous rhetoric, we are not against technology. Rather, we are against lowering the standards of the ham radio tests any farther than they have already been lowered. Your "Luddite" charge is an anti-technology straw man that you erected, plain as day.

> >

I am doing no such thing. I use DSP. I like DSP. DSP is wonderful. DSP is not what I am talking about. I'm glad you are a wealthy ham, Carl. I'm glad you are rich. Most of us are not. Even those of us who have above average incomes, however, are selective as to how we spend our hard-earned money. By seeking to lower the entrance requirements for full ham priviledges, you are the one who is jeopardizing ham radio. In a previous post you said you think millions of new hams on the HF bands would be a good thing. I suppose that means you advocate putting 20 pounds of crap in a 5 pound bag. Talk about a mess. The rest of us believe the QRM from that would get a bit tough, even with DSP, Carl. You sure have some nutty notions.

> >
> >I am not confused at all. I simply said, and will say again, that if from

>
> SO no matter how wrong one is, if they agree with you, they're right?
> YOU'RE UNBELIEVEABLE ... totally out of touch with reality ...
>

You're the unbelieveable one, Carl. Can't you see that other people can, from their perspective, have different views than yours? Is everything to you either black or white? Is it really your position that no matter how right someone is, if they disagree with you, they're wrong? You are totally out of touch with humanity, much less reality. Try answering my arguments for a change, instead of throwing dust into the air.

> >Show me where I have lied, Carl.

>
> Carl - wa6vse
> carl@ais.net

Ooh, did I make you angry because I asked you for evidence again? You know I haven't lied about one single thing. You just keep denying the things you have said, when I quote you. I label my opinions as opinion, while you try to pass off your bogus opinions as fact. Now, I don't have to prove an opinion, I only have to offer it. You, offering *facts*, are under a burden to prove your *facts*. I suppose the reason you haven't, is because you can't, and just don't want to admit that you can't.

Bye for now,
Jim - AD4VL

5554. Need Help Installing My 2-meter Mobile

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-21 00:00:00 UTC
From: Gene from ME <gogen@nemaine.com>
Message-ID: <54go2k$7ok@jogging.cyberTours.com>
Source record: 214271

Hi,Gene N1RCL here. I just purchased a 2-meter mobile rig and need help with the installation wiring. The dealer told me to just wrap the positive lead around a fuse in my car. This doesn't sound right. Besides, how in the heck could I replace the fuse with a thick lead attached?? Any help would be appreciated.

Thanks,

Gene

5555. Re: Oops: Re: Receiving traffic helicopter signal:

>
>I was surprised at the comment on tracking technology so I gave a call
>to a few TV stations' engineering departments (one who had a helicopter
>with live feeds) and got the following info:
>
> They do use microwaves.

Yes, we use the 2 GHz band, FM video. There are 8 channels allocated for
ENG use here.

> The helicopter typically uses an omnidirectional antenna.

Perhaps, though we prefer to use a directional antenna on the chopper
for transmitting. Use of an omni increases multipath problems, IE ghosting,
dramatically. And we can get much better range if we use a directional
antenna on the helicopter. Typically, we can work out to 50 miles from
the receive site with the gain antenna and 10 watt transmitter. We have
3 2 GHz antennas on the chopper, 2 17 dbi gain disc yagis (old Goldenrods),
mounted on the skids, one forward facing, one rearward facing, and a
stubby omni hanging down between the skids. The pilot controls which
one he uses.

There are two receivers on board too, and he can switch one of the
antennas to the 2 GHz receiver in order to relay signals from a van
which doesn't have a direct path to one of the receive sites, IE the
chopper can act as a repeater. Usually, he'll use the little omni for
that because he'll be close to the van. The other receiver is at 13 GHz
and is used to receive signals from a portable unit, IE a manpack or
motorcycle mounted unit. It has its own omni antenna, belly mounted.
We use that for parades, marathons, etc. The chopper flies over
the portable and relays his signals back to one of the receive sites.
We always have some ghosting when using the omnis, but it's often
the only way to get the shot back to the station.

The chopper has 3 cameras on board too. The pilot controls which
one is fed back to the station. There's pilot cam, which faces
the pilot and lets him do talking head reports, a handheld cam
used by the photographer, which is used to show stuff on the

ground, and tail cam, a tiny camera which looks forward from
the tail that we use for "beauty" shots, IE showing the chopper
in flight. The pilot switches them too. He's a pretty busy guy.

> Using lat/long from the helicopter's LORAN (I asked about GPS and
> they don't use it, yet), a ground station (one of several a given
> station has/operates) antenna array is pointed toward the
> helicopter.

Perhaps, though usually the LORAN is only used to give the pilot a
bearing to point his antenna. He has waypoints set for all the receive
sites, so he knows the bearing he needs to use. This is not automatic,
he aims the antenna by aiming the chopper. He can switch manually between
fore and aft pointing antennas as needed. We did use the LORAN provided
coordinates, fed back on a UHF link, to aim receive site antennas some
time back, but the company who made that equipment went out of business,
and it didn't work very well anyway (maybe that's why they went out of
business).

Now we use ordinary receiver limiter current, IE signal strength, readings
to servo the receiving antenna and track the chopper after we manually
acquire him. It usually works better, and is the only way to do a bounce
shot. (A bounce shot is when we use some tall object as an intermediate
passive reflector, IE a mountain, a water tank, a skyscraper, etc. That
is frequently the only way we can get the shot in urban clutter.)

We use sense switchable circular and linear polarization. That cuts down
on ghosting. A bounce, IE ghost, will have reversed polarization sense
from a direct shot, for example if the chopper is transmitting RH, the
bounce will be LH. When we *want* to use a bounce shot, we switch
polarization sense on one end of the link which suppresses the direct
signal and enhances the reflected signal. Otherwise we use the same
sense on each end and get bounce suppression. We can switch to vertical
polarization if he goes to the omni, though as I mentioned that creates
all sorts of ghosting problems. We can use horizontal polarization at
the receive site too, but that isn't useful with the chopper. It works
well with a van, though, when they need to knife edge over a building
or mountain to get a signal to us.

The receive sites use 6 foot dishes on tracking mounts. These are
located on the highest points we can find. One is 30 feet from the
top of our transmitting tower, another is on the roof of the tallest
downtown building, and two more are on nearby mountain tops. These
all used to link back to the studio on 7 GHz fixed microwave links,
but two of them are on fiber now.

>When I asked him about moving helicopters (the infamous bronco following
>helicopter in LA, for example) he said that an alternative is to have
>another stationary helicopter relay the signal.

Two choppers? Ouch, that would be expensive. We can track a moving
chopper fairly well if the pilot is good, IE he often has to crab

in order to keep the antenna aligned. We do traffic video that way every day. We do have receive sites that are along the major expressways, so he's usually flying toward or away from one and can use the fore or aft antenna. If he's off the main routes, though, he has to crab if he wants to move and keep the antenna aligned at the same time. Our pilot *hates* to hover, which sometimes drives us crazy when we want to use him as a relay for a stationary van, but he likes crabbing along, which makes his usual stuff, and working with a motorcycle, easy.

The transmission engineer's life can get hectic. During a newscast, we may have 5 vans, a portable or two, and flutterbug all trying to get into 4 sites at once. Since our 8 channels have to be shared with the other stations in town, that's another layer of complication as their units are trying to get into their receive sites at the same time too. The engineer is often seen with two phones pressed to his ears while screaming into the two way and listening to the whining of the show producer over the intercom as he commands the remote sites, juggles the remote transmitters up and down, and coordinates with his opposite numbers at the other stations. And then there are the satellite remotes he has to bring in too. The 1000 count bottle of Rolaids on the console is *his*, don't you dare touch it.

hows this for an offer from a contester:

this coming weekend we will stay off the warc bands completely. and for
those who can't use the warc bands we will completely avoid the cw
segments
of the other 6 hf bands, and the whole vhf/uhf spectrum(except for
established
packet networks of course). in 4 weeks we will reverse that and avoid
the ssb segments of the 6 hf bands.

thats over 50% of the hf spectrum each weekend, and almost 100% the
other
5 days each week.

> CTCSS signal is not present.

What's more, not all repeaters that require a PL to access will TRANSMIT a PL tone. Before buying the decode deck, check with the repeater operators to see if they transmit the PL. Normally PL is below the freq response of the repeater's audio circuits, thus gets filtered out.

The signal is definitely microwave and is in fact tracked. The antenna
on the helicopter tracks the base. The systems are made by Troll
Industries in Valencia, Ca.

Source record: 214282

I have a Radio Shack HTX-212 mobile 2 meter unit and really like it. It is identical to the Yaesu FT-2200 mobile. It even has all the same buttons and controls in the same places as the Yaesu. The 212 has 10 watts/50 watts out (selectable). It hits every repeater I want it to and has very good audio clarity. I can not complain about this unit at all. I own a Yaesu FT-50R dual band handheld and love that unit equally well. You have to try out a Radio Shack for yourself to know if it is good for you. Dont listen to anyone else's horror stories, find out for yourself.

The traffic helicoptors in the SF Bay Area are found between 450 and 451 MHZ. KGO is 450.2125MHZ.

I've also heard micrometers referred to as "mikes"...or is it "mics"???

Then again, back in the old days, before capacitors had pF's (puffs) they had mmF's, or mickey-mikes (mickey-mics????), or was it uuF's? But I digress...

5568. MARS Mod for IC751

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-21 00:00:00 UTC
From: Joesph Fenn <jfenn@spartacus.hula.net>
Message-ID: <Pine.OSF.3.93.961021122711.7717H-200000@spartacus.hula.net>
Source record: 214285

Okay heres the modification to Xmit on all fqcys for the IC751 (not the IC751A).
Remove bottom cover of IC750/751. Locate J3/P29 on logic board (to rear of transceiver). Remove black wire from P-29, use a needle or pin to push connector out of plug. Then cover pin with small piece of heat shrink tubing. Verify that the black wire is connected to R52 as per schematic, Replace bottom cover and away you go. Xmit from 200Khz down to 30Mhc or thereabouts.....
Another mod on same rig to increase power output to 100 watts on 28Mhz.
Remove bottom cover of IC750. Locate R21 on logic board. Either remove it entirely or simply cut this resistor out of the sicruit.
Replace bottom cover.
KH6JF (aka kilroy)

> attached?? Any help would be appreciated.
>
>
> Thanks,
>

NO NO and NO. Run the wiring (positive and negative)to
the battery. You can probably find the wiring harness
that leads thru the firewall

Make sure both leads are properly fused. VERY
IMPORTANT!!!

MAKE SURE THAT THE RADIO IS OFF BEFORE STARTING THE
CAR. The sudden drain than increase in electrical
power can really do a number on your rig

If you need a temporary fix until then, use the cigar
lighter plug, but don't run the radio at full output.
The wiring won;t handle it very well.

Good Luck

I have a vintage Ranger and it works fine on all bands. The E.F. Johnson Company also produced a later model called the Ranger II, which had a few minor differences and had built-in PTT, I believe. Occasionally, when making a long transmission, these transmitters could be said to be wind-controlled, but that is at the option of the operator. BTW, what newsgroup did you say this is?

The Metro Rail Subway system in Los Angeles utilizes Fire, Police, and Security repeaters feed into a
common antenna. This antenna is actually a very high loss coax, very wide braid. This cable is strung
throughout the stations and tunnels to provide comminications.

Normally it is hardline that has slots cut into the copper shield I forget the proper name of the cable. Andrews used to make it, they may still. You will also see this used in many high rise buildings for better radio reception.

Mike is not an abbreviation for *microphone*; it's a synonym, a
full-blown word in existence since the 1920s, that comes from shortening
and alteration of *microphone*, much in the way that *auto* came from
automobile. Nor is *mic* attributable to the Japanese; it's in the *IEEE
Standard Dictionary of Electrical and Electronics Terms* as an
abbreviation for *microphone.*

Not necessarily. If it's in a flying helicopter, it would be quite expensive to have an antenna on some type of motorized platform which would keep it aimed at the home base while in flight. IMO, it would be more practical just to broadcast the signal omnidirectionally.

>M2 EB-144 eggbeater antenna.
>

Well I have never used the antenna mentioned above. When I was
active on RS-10/11, I use a homebrew 13 ele Yagi-Uda (20' boom). I had
no problem getting into the satellite, on most occations. My guess is your
antenna is the problem. On the times I would work the satellite, I would
switch from high to low power (45 to 10) and could tell very little difference
in my signal (audio wise). I also worked RS-15 with this same antenna. I
sold the 2m all-mode and now a friend of mine has the antenna. I built
that antenna for about $30 and used YO to design it. Good luck!

I received this today from the obvious place on the internet. I'm forwarding it to you with the thought you might be interested in this subject.

K5FNI

If a message is ever rejected, please contact the list's owner:
listown@jackatak.theporch.com

For information on this service and how to use it, send the following request in the body of a mail message to listproc@theporch.com:

HELP

All requests should be addressed to listproc@theporch.com.

WELCOME TO THE BOATANCHORS MAILING LIST

We hate to say "welcome" with our hand stuck forward looking for money, but this is important for our survival as a useful resource.

TANSTAAFL (There Ain't No Such Thing As A Free Lunch):
The "boatanchors" list is privately funded and managed, which we feel gives more stability than a site dependent upon an individual's affiliation with an employer or university.

In the interest of keeping it this way, the members of the list have agreed among themselves to help defray the costs of its distribution through annual subscriptions, beginning 15 March 1996, with an annual fee of $12.00.

You will, as a new subscriber, have a "trial" subscription of about four to six weeks, which should give you plenty of time to look us over and make up your mind, as well as time to get your subscription in and processed.

If you find the information and fellowship here useful to you and you want to do your part to ensure the continuation of 'boatanchors'

you may send your subsription of $12.00 (be sure to include your email address on the check) to:

Jack G. F. Hill
P. O. Box 1685
Brentwood, TN 37024-1685

We can also take MASTERCARD, VISA, and AMEX -- FAX your card number and expiration date (with email address) to:
(615) 459-0038
The charge will be from "Delker ELectronics, Inc"

Now, with the business out of the way, on to more about the BoatAnchors mail list...

1. This mailing list is devoted to the discussion of vintage communications equipment, which we fondly refer to as "Boatanchors," and to closely related subjects. The central theme is vintage amateur radio equipment using vacuum tube (firebottle) technology, but we have been known to drift into discussions of such things as entertainment boatanchors, early tuned fgeeder antennas, telegraph keys, classic electronic/radio books and radio history.

** Note **
There are some topics that are too emotionally charged to generate worthwhile posts: in particular, the ARRL, Code versus No-Code, and the Examination Process, are all topics that can be discussed in other forums, and are considered inappropriate for this list. Please do not even *think* about posting about these subjects.

**** Special Note:
Even though we all prefer that there be few or no "rules" we have to have three hard and fast ones:

First, because, in the past, we have encountered problems with ARRL Bulletins being posted to the Boatanchors List, we must ask that you never post an ARRL Bulletin here, even if the subject matter is PRIMO Boatanchors.
Just do NOT do it.

Second, please do NOT ever "ping" the list... There is NO reason to send a test message to the list. If you are encountering delivery problems, please contact:

listown@jackatak.theporch.com

Due to the size of the list, even one or two "pings" result in a very heavy (and unnecessary) load on the list (especially if it is trying to recover from a crash.)

Third, do not discuss list policies on the list. There are other suitable forums available for such discussions, but never is the list an appropriate venue.

2. You will find the accumulated wisdom available here to be an invaluable resource if you have questions about vintage radio operation, maintenance, restoration, or history. If you have knowledge or expertise that can help answer a question, please post your responses. You may think that the answer to a specific question is best directed to the poster via direct e-mail. Sometimes, that is the best approach. But, some of the better threads on this list have been generated by a single question. So, when in doubt, post the response to the group.

3. As in most polite societies, we deplore the use of ANY electronic violence such as flames, personal attacks, and long-winded diatribes of any type. Please be courteous and polite. We think this mailing list has one of the highest signal-to-noise ratios on the InterNet and we want to keep it that way!

4. For sale notices and items wanted are welcome, IF the items are boatanchors and related equipment.

-- For long lists of items, direct them to:
listown@jackatak.theporch.com
so they may be made available to those who want them without burdening the entire list... And,

-- Please do ALL the haggling and negotiating via private e-mail or other means.

-- And, PLEASE do not post an advertisement for a commercial venture whether a newsletter, book, organization, or the like. We agreed long ago that these types of commercial uses of the list were at odds with the spirit and culture of the list. And please note that "commercial" has NOTHING to do with IRS status... it refers to organizations (and individuals) who habitually perform a service or sell something.

5. We ask that you limit the size of your responses, where possible. In particular, the list culture is different from many corporate environments, and the wholesale inclusion of a previously posted message is considered in bad taste when you use the reply function. Please edit the original posting to delete the parts that are not needed to understand your response. That effort will reduce bandwidth and storage requirements which, in turn, will make all subscribers much happier!

For long posts, such as a construction project, listing of military equipment contracts, and the like, please consider sending them to the list owner (listown@jackatak.theporch.com) so they can be posted to the list server for optional downloading, rather than posting a long post to the list as a whole.

6. This is the third incarnation of the Boatanchors mailing list. The original listowner was Jim Lockwood, KM6NK, who began the list at his workplace in August 1992 as a way to find other people who share his interest and passion for "heavy iron." When Jim moved East and

gave up his InterNet access, the reins were transferred to Paul Prescott, N1AAC, who ran the list for about 12 months through the good graces of MIT. In December 1994, "BoatAnchors" found a home on theporch.com with the current listowner, Jack GF Hill, W4PPT.

One of the more interesting things about this list is the fact that most of the original subscribers are still around.

7. The listowner is happy to provide this service via a list processor that supports subscribe, unsubscribe, and subscription delivery option changes and functions via correctly formatted messages. Problems that cannot be resolved by sending e-mail to the list processor should be addressed to:

listown@jackatak.theporch.com

Please *do not* submit such administrative messages to the whole list! Such messages only irritate the readers. If you remember only one thing from this message, remember that a "Help" message to the list processor (listproc@theporch.com) will get you instructions on how to unsubscribe or change your subscription options.

8. Hot Spare Boatanchors List

In order to reduce the affect of host outages at the main list server site such as we all experienced in Fall '94, a "hot spare" list server is set up at boatanchors@beacons.cts.com. It will normally be disabled, but in case of an outage at theporch.com a message will be sent to the list indicating the spare list address is to be used for list postings until the problem is resolved.

The subscription list will be mirrored at the spare site so that the disruption of list traffic will be minimal. The spare site will not be activated unless the outage persists for more than a day. In case of an extended outage of the main list site, subscribe/unsubscribe requests can be handled by the spare site since it runs the same software as the main site. Use the address listproc@beacons.cts.com, list name BOATANCHORS, for such requests.

9. This subscription is available in two formats. The first, also the default is to have each posting to the list mailed to you separately. If you want it like that, you don't have to do anything. The second option is to receive digests which means the messages are collected and mailed out to you only if it exceeds a length limit (approx. 1,000 lines or a time limit (one day). To change to the digest form, sent email to:

listproc@theporch.com

with the following body:

set boatanchors mail digest

If you want to temporarily suspend receiving the list but don't want to
sign off the list, you can set your mail to postpone by sending email
to listproc@theporch.com with the following in the body of the mail:

set boatanchors mail postpone

This will stay in effect until you change your mail status to one of:

ack noack or digest
(ack, the default, reflects your posting to the list back to you;
noack is individual messages, like 'ack' but does NOT send your
own submissions to you;
digest sends a daily compendium of messages, or when there are 1,000
lines of message)

10. Getting the FAQ

If you want to read the FAQ for the boatanchors mailing list please
send email to listproc@theporch.com with the following content:

get boatanchors FAQ

You will receive this via email in a short while.
Please note: the FAQ is about BoatAnchors, the gear, not about the mail list!

11. Again, welcome to Boatanchors!

5590. Re: RS-10/11 Help

Newsgroup: rec.radio.amateur.misc

RS-10/11 in addition to the 2M up 10M down mode, is sometime
active with 15M up and 10M down. I have not been active on
the RS birds in some time but it might be possible that
the bird is in the 15M uplink mode when you tried to access it.

In the past I have worked it with as little as 2W out to a Ringo
Ranger, you do not need a lot of power on the uplink!

Good luck on the birds...

Source record: 214297

about a year ago, I had a tech modify a Kenwood TH79AD dual band HT.
After the mod, the third row of the keypad ceased to work. He denied
misdoing the mod, and said the cable from keyboard to CPU tore loose.
I sent it to two techs, one of whihc replaced the keypad, the other
sent it to Kenwood. Kenwood says that it was caused by (Shortened
version is below this text). Anyway, he FUBARE'd the mod. Do I have
any legal action against him? It's a $300 fix from Kenwood. For a $400
radio.
Small Claims Court??
Do I have any recourse? The radio was brand new.

-
We found a lifted solder pad where he made the modification, and it
turns out that there was a wire trace connected to that pad under that
board. There are 4 layers of wire traces embedded in that board, and
he broke a trace that you can't get to or connect to.

Gee,

I wonder if all of those yen brought in as DXCC fees could have
covered it? I don't know the current rate structure, but that's at least
$2000 in application fees alone.

A Thought,
Joe ka0yos

Anyone with information on linking two UHF Maxtrac mobile radios so they will operate as a repeater. I appreciate any info. or recommendations on a repeater controller which will require minimal intrusion into the radio. I have a sufficient power supply and cabinet but I'm not quite sure if the radios can be used as a repeater with minimal or no modifications.

Thanks, John KA4WKS

Bad advice, don't fuse your ground lead ever!
If you do and the fuse blows, your rig at best will still ground
itself thru the mounting bracket, at worst thru the antenna coax.

5599. [HELP] PTT Microphone Connection Problem...

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-22 00:00:00 UTC
From: lumo68 <s_jhcheong@cais.kaist.ac.kr>
Message-ID: <01bba84b$c9d95e20$12fbf88f@energy8.kaist.ac.kr>
Source record: 214304

I have a old-fashioned CB Rig named PACE-8025.
However I lost the Microphone (4-Pin, PTT Mic.).
Well.. I'm trying to make a mic. with a audio microphone and a toggle
switch.

BUT! I have a BIG problem...

That is, I don't know how to connet the microphone socket.
The socket looks like tihis:

```
+-------+
| 1 2 | 1, 2, 3, and 4 represent the connector.
| |
| 3 4 |
+---+---+

^
|
+------- a protrusion toward inside.
```

#1 doesn't connect to any electronic device on the PBC.
#2 connects to the point marked as <PTT> on the PBC.
#3 connects to the point marked as <GND> on the PBC.
#4 connects to the point marked as <MIC> on the PBC.

When I connect #2 and #3, the TX LED was on!
But I don't know how to transmit my voice signal.
Though I connected #4 and #1, It didn't work!

I need your help.

Please let me know how to solve this BIG problem...

Mail me to: s_jhcheong@cais.kaist.ac.kr

The boatanchors newsgroup is called rec.radio.amateur.boatanchors - and you subscribe using your newsreader program. The information file that was posted refers to the Boatanchors-List, a fine-business mailing list that has been around since August 1992 and is an excellent resource on the subject. The two are not the same - one is a mail reflector and the other is a usenet newsgroup.

No, always fuse both the positive and the negative at the battery.
This is very important. You can have a vehicle fire, or at least
fry your radio, if you don't fuse the negative and the engine strap
fails. That makes your radio the only return to battery negative
for all vehicle current, including the 200+ amps of starter current.
That'll fry the radio at the least, and possibly start a vehicle
fire. All the manufacturers insist that you fuse the negative for
this reason.

Hello,
My experience was very different! I tested (and passed!) my Technician VE exam. Having read some ARRL books and this news group, I was informed that many hams were shy, and with some bad apples involved in jamming and CB type broadcasts, there could be expected a certain hesitation about unknown folks at these conventions. So I just introduced myself to a bunch of folks! I met some great men and women with a wide varity of ham interests and I had a lot of fun! I was invited to join some repeater associations and given good advice on rigs and antennas. I met some curmugeons and opininated turkeys too--just like real life! Ham radio is really a cross section of humanity! No, it wasn't as big as a computer convention but it felt like there was room for a newcomer. The first days of fall brought with it the usual Bay Area weather patterns and modern electronics are not cheap but they do everything but mix drinks--no surprise there. I had a good time (and am anxiously awaiting my call sign, :))
YMMV,
73

Connect the microphone between 3 and 4 and the PTT switch
between 2 and 3. Note, there are 2 connections to 3. Pin
1 is not used.

Well, lemme see here [as he adjusts his head so the
sunlight doesn't blind him as it reflects off of his trusty
bi-focals...]

The switch on the left (or Driver's Side here in the People's
Republic of California) locks out the keypad from fumbling
fingers when whisking the radio up to your ear to see if that
last call was for you.

The switch in the center, the little three position jewel,
has to do with how/where the radio stops when in the
"scan" mode. Left-most will stop on "clear" channels,
center position causes it to stop on "manual", what the
hell ever _that_ is supposed to be good for, and right-most
position will stop when it detects a "busy" channel.

"Busy" or "clear", as used in the aboce context seem to
be pretty much the same as squelch open or closed.

The little switch on the right (Passenger's Side here in
the People's Republic of California - "Bed and Breakfast
for ALL!") sets the frequency step for the scanner - leftmost
for 25 KC steps, and rightmost for 50 KC steps.

Best of luck.

Dallas (Texas, I assume) is a huge city, so finding one shouldn't be a
problem. If no one responds to your posting about a specific club,
try your local Radio Shack for help. Most times they have a listing
of local clubs. Beyond that, most people at Radio Shack are useless
when it comes to Amateur Radio. Most are not licensed, so they don't
know anything more.

Sorry Steve, but the first Steve is correct. Both leads should be fused as close to the battery as possible. What do you think would happen if the radio case or coax sheild would come in contact with an unfused positive power source?

BTW, Kenwoods and Icoms both come from the factory with both leads fused.

Take care.

I almost bought one about a year ago. The only thing that stopped me was
the battery that holds the memory information lasts about 5 years, but it
is NOT user replaceable. I've heard that only a few models have a user
replaceable battery. All the rest must go back to the factory for
battery replacement.

In a previous article, mike.anderson@asacomp.com (Mike Anderson) says:

Nope, they are directional antennas and they are microwave. A number of companies manufacture them with radomes over the antenna though, so you cant see the moving parts. On the tower, usually the broadcast tower, the receive antenna also tracks the helicopter. Its quite a complex system with control equipment that keeps the two antennas aligned.

>
> The traffic helicoptors in the SF Bay Area are found between 450 and 451

Your thinking of the Radio broadcast. Or perhaps the tv audio from the cameraman is sent on the 450 frequencies. All the video is up in the M/W portion.

From: Dirk@from.net
Message-ID: <326d47c3.0@pgh.nauticom.net>
Source record: 214327

I own a ZETEL SDP-600 personal autopatch that I picked up used at a hamfest. The guy guaranteed it to work and gave me all the information including the original operation manual. In various articles I have seen in 73, QST, Radio and several other Ham radio related publications, it states in the advertisement that the unit is 'immune to power failures' via an EEPROM chip.

I can program the unit without any difficulty, but when the power goes out... so does the programming information. I need to re-enter all of the security codes, the ID, etc. etc. Does anyone have a clue as to why this is happening? Other than this, the unit functions fine.

Please respond via EMAIL if possible, as I do not get half of the posts because of my crummy ISP's servers or their feed. Thanks.

14.313 mhz
This amatuer frequency is a gapeing wound on amatuer radio ! And all thos=
e persons whom continue the festering, & insight the discord, should be a=
shamed of themselves. You show Ham radio in a very poor public image, and=
cause a foul PR problem. =

Then there are those whom use it as a public toilet, or a podium for you=
r self-pontifacation. This is equally as offensive as the day to day abus=
es. I guess that you don't even realize that the things you do there are =
seen by SWL's & hams, the world over, but I guess you don't really care a=
bout amateur radio or what happens to it.
These actions only give those who wish to aquire ham frequency spectrum,=
more ammunition to fight with. If this type of offensive activity conti=
nues, ham radio on HF, as we know it now, will go away. =

I don't know who. or why the B.A.R.F.(Better,Amatuer,Radio,Federation), =
came to be. It's my guess that their "GOD", KV4FZ(Herbie), runs this "org=
anization". I have heard their "doctrine", they would be better call; Big=
gots,And,Radio,Fascits). The members of this "group", seem to be intent o=
n "taking" by force, this frequency, from whom ever is on it, at any time=
of day. On the other end of the rainbow, you have guys(whom I will not n=
ame), that I refer to as "Super-Jews", that do mortal combat on the airwa=
ys, and over the phone-lines. They are locked in a struggle against the B=
ARF bigots(anti-Semites). This type of action, also wounds amateur radio.=

Enough about the "lesser" groups inhabiting 14.313. The greater problem=
s of this frequency, are "Jammers, interference, unidentified stations, e=
tc. (I wouldn't want to be heard on this freq. either.) The more persons =
that "try" to clean it up, the more they fan the fire. These "idiots", fe=
ed on attention, & revel in the limelight, and having their efforts ackno=
wledged. I know that there are a few hams out there that have tried to fi=
ght the "idiots", but you will never win, as long as you give them what t=
hey want, ignore them, IGNORE THEM, IGNORE THEM, pretend that they don't =
even exist. I encourage all hams to not use that freq., don't talk to any=
one that does, give them NO AUDIENCE, no listeners, no fuel, no food, no =
ammo. With nobody to talk to or listen, these "creeps", will fade away, l=
ose interest, give up. This is the only way to deal with "jammers", or QR=
MMERS as they are often called. =

It's a sad day for amateur radio when these type of things are happening=
, it's hard to say why it has come to be. =

I, personally have heard many "older" hams acting in this ill-mannered w=
ay, these guys/OT's should know better than this, the older guys should b=
e teaching the younger hams "the art" of operation on ham radio, but they=
have gone "crazy" or something, they act like spoiled little children, b=

itching & jamming when anyone "dares" get near "their" frequency. As far =
as I know the FCC's rules state that "No stations have sole rights to ope=
rate on any frequency, when an existing contact occupies that frequency."=
There is the problem, even when the said frequency is quiet, and no stat=
ions are heard, these OT's think that nobody that is not a member of thei=
r "group", should be allowed to use it. The same goes for "NET" freq's, i=
f you dare make a contact anywhere within 5 khz of "The (God's gift) to a=
mateur Radio Net" freq. they turn into a bunch of Jammers, throwing carri=
ers & noise on the offending operators. This makes them as bad as any oth=
er jammer.
The more ill-manners, bad operation, jamming, and over-all poor operatio=
n, that continues, the less likely it will be that we can "justify" the s=
pectrum that hams use.
"Abusive language, in the name of "Free speech", is an abomination."
We need to put the "SERVICE", back into the AMATEUR RADIO SERVICE, and t=
he Manners back into our operations, without it, there is no difference b=
etween Hams and CBer's

I bought an HTX-202 for my first radio also. I used it base, mobile,
and portible and really liked it alot, but it was not long before I
was ready to upgrade. My advice is that if you have the money to
begin with go ahead and get a top of the line radio. However if yo
can't afford or just don't want top of the line than an HTX-202 would
make a good radio.

mike.anderson@asacomp.com (Mike Anderson) wrote:

I believe the actual term 'Luddite' stems from a group of British
textile trade unionists (named Luddites) who in the early 1800's
destroyed some textile machinery in the belief that it would put them
out of work and also in the belief that they could stop progress. It
seems quite appropriate for the Pro-Code group.

That's an understatement, Chuck.

You're lucky if a Radio Shack employee recognizes the words "resister" or "diode." I _do_ think that most of them know what a battery is, tho.

(I think Radio Shack has a lack-of-education requirement for hiring. If you know too much, you're outa there! And what do they pay at Radio Shack, anyway? $3.25 per hour?!)

5642. FS: Heathkit Technical Bulletins

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-23 00:00:00 UTC
From: Chuck Penson <penson@sci.mus.mn.us>
Message-ID: <326E3E39.5271@sci.mus.mn.us>
Source record: 214211

Heathkit Technical Bulletins
* Covers complete years: 1966 to 1979 (1977 missing).
* About 1000 pages on standard 4 x 6 microfiche.
* $20 plus $3 shipping.
* Satisfaction guaranteed.

Heathkit Technical Bulletins were the company's own private "Hints and Kinks" publications distributed for use by Heath technicians around the country. Technical Bulletins were compiled from notes by factory techs as well as techs in Heathkit stores nationwide, and contain thousands of fixes, modifications, and hints for kits spanning Heath's entire product line. Everything from TV and stereo to ham gear and general products.

There are nearly 1000 pages of Technical Bulletins dating from 1966 to 1979. Note: 1977 is missing from this group but will be supplied free of charge to those who purchase a set, if and when I discover a copy.)

This low-tech fiche format is inexpensive, reliable, and easy to use. Fiche readers are cheap and plentiful.

If you need additional information please write or call.

Thanks!

5643. Re: 'Nother Pro-code Luddite

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-23 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Oct23.135708.27038@ke4zv.atl.ga.us>
Source record: 214212

In article <54f3vd$dq1@news.asu.edu> wmunsil@aztec.asu.edu (WILLIAM W MUNSIL) writes:
>
>What IS a Luddite, anyway?

A follower of Ned Lud, a 17th century socialist rabble rouser. Bands
of Luddites invaded English mills from 1811 to 1813 smashing steam looms
because they feared that their livelyhood, hand weaving, would be destroyed
by the labor saving devices. Of course they were right, the steam loom did
replace cottage weaving. Many of them wound up testing the tensile strengh
of fine hemp ropes, however, and the steam looms continued to operate.
Generically, the term luddite has come to mean anyone who fights against
technological progress, increased productivity, or greater efficiency.

On the Continent, another term arose for those attempting to derail
the Industrial Revolution. That term is saboteur. It comes from
the practice of jamming a wooden shoe, a sabot, into the works of
the steam loom.

Weaving was the first industry to be automated. Punched card controlled
steam looms (Jacard looms) were much more productive and efficient than
the small hand looms used by the cottage industry. They made possible
the inexpensive mass produced clothing that we wear today. Before the
steam loom, most people only owned two sets of clothing, their work
clothes and their Sunday meeting clothes, because hand made cloth was
too expensive for them to own more.

They only bathed on Saturday night because their only change of clothing
was their Sunday suit. This is also why perfumes were very popular, most
folks smelled pretty ripe toward the end of the week. That same lack of
hygene, with most people suffering from infestation by fleas, ticks, and
lice in their filthy clothing, was why plague spread so rapidly through
Europe before the Industrial Revolution. So you could say that the Luddites
and the saboteurs were fighting to maintain traditional death and disease.

As Paul Harvey would say, "Now you know the rest of the story."

The term "Luddite" cannot legitimately be applied to pro-code supporters, as we do not advocate stopping progress of any kind, especially technical. The morse code testing issue is not technological. Morse code is not a technology, but a communications mode. The underlying technology used to transmit morse code can range from flashes of light to on-off keyed RF carrier. The bogus notion that morse testing is holding back progress in technology is patently ridiculous.

Have you tried pspice? it is in the microsim web site and they have a
free evaluation version. Many manufacturers have spice models for their
products. I don't know about the vacuum tubes. But is all you are
lokking for is a drafting type program them this will serve the purpose
since it also has a feature to edit the actual physical layout of the
model. (By model I mean : taransistors, resistors, diodes, power
supplies....etc.) I recommend getting the 6.3 version. If you don't want
to download it, they will send you a cd.

I'm in the Market for some T1 Channel Banks. I really don't know a lot about them, but, based on my limited understanding, how tough could it be to multiplex 24 signals onto a composite channel?

I'd like to find some "older" models that are inexpensive, but that work, in all, about 5. That way there would be some sparing, and I could experiment a bit. I'm interested in using them for computer over amateur microwave application.

Thanks-

Barnaby

: I went to my first Pacific Division Convention of the ARRL (PACIFICON
: '96), on 10/19/96, and it was a BIG disappointment. I first checked out the
: "swapmeet". It was held in a parking lot two blocks from the convention
: hotel, and it was freezing outside. The wind chill must have brought down
: the temperature to 32 degrees F. There were only about 25 sellers out
: there, and most of the equipment looked rusty. Then I went to the
: convention hotel itself, and I bought a ticket for $5. They told me to
: write my name on the ticket and to use it as my badge, but they wouldn't
: let me use a pen or pencil that they had. They said go ask around for one.
: That really PISSED me off! I also gotan entry ticket to win some sort
: of prize, but it said that you had to be present to win, so I didn't
: bother to enter my ticket (as I knew I wouldn't be staying long).
[snip]
: I could go on some more about this, but enough said. I'll never go to
: another Pacificon!

I wanted to go to Pacificon, primarily because of my interest in low-power operating. There were several scheduled presentations by some "big names" in the QRP realm.

But, I had been to Hamcon '96 (the ARRL Southwestern Division Convention) in the Phoenix area the week before, and decided to pass on being away from home on two consecutive weekends.

Without being too critical, one observation I made was that this type of event doesn't seem to scale well. Noticeably absent was Icom, for whatever reason, but Yaesu, Kenwood, Standard and Alinco all had nice booths. The number of vendors was much smaller than last year in Long Beach. I assume that some of the smaller vendors might have been there, if the event were held in the LA or San Diego area. More hams might have attended for at least one day.

;^)

> c.) I haven't found a flea yet that you couldn't find 120VAC SOMEWHERE, If
> your spending more than a hundred dollars or so test it out before you buy.

Ah! If you are really serious about buying equipment, carry one of those little 200W 120VAC inverter bricks *with you* in your backpack, along with a cigarette socket to car battery clip adapter. Keep a small marine or gel-cell battery in your car (or with a friend who has a table).

This way, when you "roll up" on a good deal, ask the seller if you can borrow his cigarette lighter, or car battery, for a few minutes. If you can't use his car (and if you have time), run back and get your battery.

If he refuses...There's your answer!

I keep an 8-cell "AA" battery holder and an assortment of pigtail power connectors in my backpack. This way, I have an adjustable 1.5 to 12V power source to test things there on the spot (I'm planning on making a complete test box, complete with ammeter and current limiting).

I also carry a bunch of "AAA" and "C" cells in my backpack ("C" cells can be shimmed into "D" holders with a few coins between the batteries).

The same rule applies, If they won't let you test it.....etc,etc,etc.

Will they give you their business card or phone number? Make it clear you will not bother them unless absolutely necessary (secretly write down their license plate number, for "Justin Case").

Also carry a pocket DMM (This is a *must* for any flea enthusiast - NEVER buy batteries w/o testing them first!) and a small, bright flashlight (for "inspections").

Smell the equipment too! This can be a big clue as to it's condition. Does it smell like something blew up? Does it smell musty or moldy?

Another clue I have found is the physical condition of the unit. Sometimes the "cleanest" unit of the bunch is the one that failed prematurely and got stuffed on a shelf or back in the box. Whereas the "used looking" units were just taken

out of service.

More importantly than "functional", is "complete".

Nuthin' worse than getting something and finding out a piece, or a board, or a module, or an expensive or rare IC is missing. Now you know it's not functional, and there may be little chance of it even becoming functional again.

I always assume "dead" until happily proven otherwise. Follow your instincts! If you have doubts, there's a reason! I always concider the scrap value of the item also. Any expensive goodies in it? The power switch may be worth more than the item!

Some of my best deals were the "I don't know if it works...Oh,..five bucks" deals.

It's a gamble...Ya' win some, ya' loose some!

Caveat Emptor!!!!! <sp?>

(Let duh buyer beware!)

> vigorously resist change towards more modern methods ...if that's not
> "stopping progress" what is?

Doesn't stop any technological progress at all. Technology marches on, every day, so how can you claim we have stopped it? A bogus argument, and you know it. Besides, we pro-coders are for technical progress on all fronts.

>
> >The morse code testing issue is not technological.
>
> Not in the strictest sense, but you're just trying to cloud the issue.

No I'm not. That *is* the issue, and you are the one that raised the technology issue in the first place! It's your cloud, Carl.

> Morse code testing IS holding back progress in ham radio by keeping out
> more technically-inclined individuals who have no use for
> turn-of-the-century, nostalgia methods ...

That morse testing is holding back progress in ham radio is a completely gratuitous assumption on your part. Morse testing does keep out those who don't want to learn the code, but it lets many in those who are technically-capable (the written tests) and willing to achieve something worthwhile through honest effort (the morse code test).

Carl, can't you see that the fact that morse code is a communications mode that has stood the test of time is a point in its favor, not against it? Besides, the relative age of a mode does not directly relate to its effectiveness. Otherwise, I'm sure aircraft would be using a digital data mode to communicate with the air traffic controllers in the tower instead of voice. Aircraft cockpit voice recorders would have long ago gone out of use, if voice mode has been rendered a "nostalgia" mode by some much-newer "more effective" digital mode. But that isn't the case, is it? More effective is not necessarily more effective, or apt, for every purpose.

> and the advocates of
> continued Morse testing are, for the most part, the same ones who
> vigorously reject and oppose the introduction of more modern methods
> like the various digital, spread spectrum, and similat techniques ...
> out of ignorance, fear, and a lack of ability to appreciate the
> necessity for modernization ... yup LUDDITES ...

This is not a true statement. "Most" pro-code adherents do not oppose
other methods. In fact, I don't know of any. Spread Spectrum is
illegal on HF, so yes, you're right about that, I oppose using illegal
modes. Your statement is ridiculous. You merely fabricated this little
"anti-technology straw baby" so you could pin the "Luddite" label on it
and try to call it a pro-coder.

>
> >Morse code
> >is not a technology, but a communications mode.
>
> And an antiquated one at that ... but you pro-code Luddites insist on
> maintaining it as a licensing requirement, despite the fact that
> everybody ... outside of ham radio ... has abandoned its use in > foavor
> of more modern, more efficient technologies ... yup LUDDITES ...

Nope, not! Can't you decide whether it is a mode or a technology? Do you
switch back and forth as the occasion arises? You agree it is a mode,
then in the same sentence say everyone has abandoned the "technology."
Morse code is a mode, not a "technology", and it is still an effective
mode, despite your dislike of it.

There are different modes of transportation: i.e., walking, horseback
riding, driving a car, and flying. Each mode of transportation has its
place. Sometimes it is more appropriate to walk than drive, and in some
situations horseback is more appropriate than driving a car. Driving is
often cheaper than driving. CW is cheaper than most modes to set up. So
the morse mode still has a legitimate place in the amateur's repertoire
of communications modes.

>
> >The bogus notion that morse testing is holding back
> >progress in technology is patently ridiculous.
>
> No, it's patently TRUE, but the assertion that maintaining Morse testing
> is necessary and desirable in today's world flies in the face of reality
> and labels you and your co-advocates as modern-day LUDDITES ...
>
> Carl - wa6vse
> carl@ais.net

Sorry, Carl, but your claim doesn't hold water. The morse test serves as
a very nice filter to restrict to a reasonable number those who have
access to HF. Unlike the line-of-sight VHF and UHF bands, the HF bands
have world-wide capability, therefore the capability of generating
world-wide interference.

Via the morse testing requirement, our government is fulfilling its responsibility to restrict the numbers of those who have access to the HF bands. If they did not, so many americans would get on HF as to destroy the bands world-wide, not just here in the U.S. Foreign hams have a right to use the bands as well as Americans.

I admit that making the tests much tougher technically would accomplish the filtering objective. However, that would unfairly exclude those who are not scientists or engineers. The truly dedicated will learn morse code to get a license, since it can be accomplished with reasonable effort at low cost, and doesn't discriminate against anyone. OTOH, not many U.S. residents can afford the time and money required to go to college for engineering classes in order to get a ham license.

Carl, the FCC does not, I hope, share your expressed desire to see millions of additional hams jammed into the already crowded HF bands. And don't bother bringing up your "If the bands get crowded, we'll all move to Spread Spectrum" argument, because Spread Spectrum is illegal on HF. Spread Spectrum is not likely to be allowed anytime soon on the HF ham bands for reasons of national security.

>> replaceable battery. All the rest must go back to the factory for
>> battery replacement.
>
Actually that's how I found out about the battery. When I said I did not
want the extended warranty, the sales person told me it would cover the
battery replacement and that it's not user replaceable. Killed the sale
right there. I have an old ICOM handheld that doesn't require such a
battery. I added a tone board to the ICOM handheld.

Also, the original post referred to an HTX 202, which may be a mobile
rig, not a handheld (I'm not familiar with the model numbers). My
comments refer only to the handheld. I don't know anything about the
mobile rigs.

If that's the case, then using the term luddite to describe the pro-code testing crowd is clearly incorrect, since nobody in the pro-code crowd is at all opposed to technological progress, increased productivity, or greater efficiency.

Equating one's believe that code testing should be maintained, for a variety of reasons, does not mean that amateurs are hindered from making gains in any of the three areas that you mentioned. HF access will not yield technological progress, increased productivity, or greater efficiency.

5662. Help With ATV

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-23 00:00:00 UTC
From: duane@ripco.com
Message-ID: <Dzr3K0.Jwr@rci.ripco.com>
Source record: 214231

To All Fellow Hams,

First, My name is Duane Whittingham (N9SSN) and I am a Lieutenant with the Melrose Park Emergency Services Public Safety RACES. We are an EMA or an Emergency Management Agency (similiar to a Civil Defense) in Melrose Park, IL near Chicago. Our RACES Division is very active in ham radio as well as the other portions like traffic control, lighting, assist FD or PD and of course communications. Not only is this for the town but for the entire fire district, which is called a batallion and is MABAS Division 20. MABAS stands for Mutual Aid Box Alarm System. We have a mobile communications/incident command vehicle that responds on all 2nd alarm fires and all Hazmat alarms.

Here is the kicker, the Batallion has agreed to purchase for us complete equipment for ATV. Yes, we can have ATV on the command vehicle to transmit live fire or other incident video back to the fire stations or EOC's. But we think we will have a problem getting a good signal off the truck. We probably will go UHF from the truck to our EOC and relay it to a Chicago ATV repeater on 1.2 gHz. This is of course this is in the early planning stages and want & NEED your help and input. We have some decent size structures and buildings in the area as well as some forest preserves. We are wondering how high will we need to get the signal out (i.e. a large mast on the truck?). Also we want to cover all or as much as possible of the entire batallion, which covers an approx 11 miles north/south and approx 5 miles east/west. Any help or suggestions would be appreaciated.

Thank you,

Lt Duane Whittingham (duane@ripco.com)

>phone band.

A "long long time ago" when you were first licensed as a novice and
tubes were still the way things were built for the most part, the CW
requirement was a lot more relevant than it is today. Today's
technology is different ... just as tubes are passe, so is the Morse
code ... both are irrelevant in today's world of VLSI integration,
digital signal processing, computers, and the internet ...

This is NOT to say that ham radio in total is passe ... just the bulk
of the techniques commonly practiced by many of today's hams ... who,
like yourself, are the products of another generation (not meant to be
derrogatory, just a factual observation) ...

The problem is that ham radio is a (supposedly) technical activity ...
see Part 97.1 ... but we (collectively) are NOT keeping up with our
charter to be a technical service and training ground ... in fact, many
current hams specifically and emphatically oppose the introduction of
new techniques into ham radio because they're "different" (than those
current techniques that they are familiar with) and because they fear
that these new techniques will conflict with their preferred methods ...

> Now the cry is out that CW is outdated, perhaps it is, perhaps
>it isn't. If the Morse requirement is eliminated should the theory
>covered on the novice exam be at a level that by learning the theory
>the new novice should have the knowledge to build a basic station?

An unfortunate reality is that most hams don't build their stations any more, let alone their *first* station ... so having a 1:1 correspondence between the test requirement and the knowledge necessary to build one's first station is less important than it was in the long ago past ...

This is NOT to say that I'm anti-building ... I'm actually VERY pro-building and experimenting ...

>Of course if CW is outdated, that basic station becomes a great deal
>more complex than my peanut whistle ever was.

In today's world of VLSI integrated circuits, the absolute level of complexity is a bit clouded realtive to times past when everything was built with discretes ... functions that once took entire rooms full of gear now fit on a chip smaller than your little fingernail ... and the reliability is excellent, too, so the complexity need not cause as much concern in that regard as in the past either ...

>What current license exam covers the theory to build a SSB
>transmitter?

Somewhere between the advanced adn the extra, I'd say ...

>It is my opinion that if CW is outdated and should not be
>required, the entry level theory exam should cover the knowledge to
>build such a basic station.

Why require everyone to have the highest level (design and build) of knowledge, when most only need (install, connect, and properly operate) a lesser level of expertise?

As Gary has pointed out eloquently several times, the license is "an entry permit to to a lifelong lab course", not a graduation certificate.

It's high time that hams started thinking of their license in that way and start getting their satisfaction and ego gratification from what they get *out* of it and what they accomplish *with* it, rather than what they put into (getting) it (the ticket) ... unfortunately, too many prefer to rest on laurels and bask in the light of past "accomplishments" (passing the stupid test) rather than what they actually *do* with/in ham radio ...

Steve - bad idea. Scenario: Failure of battery/chassis strap. Only other path to ground is through the radio. Putting a fuse in Neg line costs you nothing.

Does anyone know what happened to the Callbook Server Summary that usaully posts the FCC's new callsign activity for the previous day? It hasn't been updated since the 21st.

I've also noted that I cannot download any forms from the FCC. The FCC's computers don't seem to be responding.

I wonder if these two incidents are related?

>The term "Luddite" cannot legitimately be applied to pro-code supporters,

Sure it can ...

>as we do not advocate stopping progress of any kind, especially
>technical.

Baloney ... you insist on clinging to outdated, antiquated methods and
vigorously resist change towards more modern methods ...if that's not
"stopping progress" what is?

>The morse code testing issue is not technological.

Not in the strictest sense, but you're just trying to cloud the issue.
Morse code testing IS holding back progress in ham radio by keeping out
more technically-inclined individuals who have no use for
turn-of-the-century, nostalgia methods ... and the advocates of
continued Morse testing are, for the most part, the same ones who
vigorously reject and oppose the introduction of more modern methods
like the various digital, spread spectrum, and similat techniques ...
out of ignorance, fear, and a lack of ability to appreciate the
necessity for modernization ... yup LUDDITES ...

>Morse code
>is not a technology, but a communications mode.

And an antiquated one at that ... but you pro-code Luddites insist on
maintaining it as a licensing requirement, despite the fact that
everybody ... outside of ham radio ... has abandoned its use in foavor

of more modern, more efficient technologies ... yup LUDDITES ...

>The bogus notion that morse testing is holding back
>progress in technology is patently ridiculous.

No, it's patently TRUE, but the assertion that maintaining Morse testing is necessary and desirable in today's world flies in the face of reality and labels you and your co-advocates as modern-day LUDDITES ...

5677. Q: No Code - Know Everything Else

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-23 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <326e5fbc.5744384@nntp.netcruiser>
Source record: 214246

There has been much discussion concerning HF licensing. Many
say that CW is outdated and as such should not be a requirement for a
HF ticket. When I was first licensed as a novice a long long time ago,
the ability to both send and receive Morse code at 5 wpm was a
requirement for my novice ticket. Although I didn't care too much for
CW I had to learn it along with the theory to obtain my WN1VKN
callsign. (Having a KN in my call was not exactly a pleasure!)
At that time the CW requirement seemed to go hand in hand with
the theory. The required theory provided enough knowledge for a novice
to build and operate a transmitter (75 w. maximum output, xtal
control and a one year license non-renewable). Although I did not
build my first transmitter, I was able to homebrew a tx/rx combination
as a novice without an elmer's assistance. I don't remember what tube
the oscillator was but it was a single stage tx (about 12 watts) while
the rx was a regen out of an older ARRL handbook. It wasn't pretty but
it worked well enough to confirm 23 states and get no OO QSLs. My
powerhouse station could be found on 3747 kcs in the middle of the VE
phone band.
I had a harder time learning the theory for my general than I
did getting my code speed up to 13 wpm. It took two trips to the FCC
office to pass that blasted theory.
Now the cry is out that CW is outdated, perhaps it is, perhaps
it isn't. If the Morse requirement is eliminated should the theory
covered on the novice exam be at a level that by learning the theory
the new novice should have the knowledge to build a basic station?
Of course if CW is outdated, that basic station becomes a great deal
more complex than my peanut whistle ever was.
An crystal controlled oscillator and a PI network will not
suffice for SSB or any of the new digital modes. The basic station
would now involve multiple stages for isolation, mixing, filtering and
such. What current license exam covers the theory to build a SSB
transmitter? It is my opinion that if CW is outdated and should not be
required, the entry level theory exam should cover the knowledge to
build such a basic station.
Of course this would seem to make the novice exam many times
more difficult than it currently is. Perhaps this level of theory is
not needed because after all the majority of us are now appliance
operators. (One of the arguments against incentive licensing back in
the sixties was we would all become appliance operators.) So what
level of theory should there be, if any?
Many object to having to learn CW because it is outdated and
they will never use it. In my case I have never advanced beyond
general because of the theory. A first career in the hospitality
industry and a second career as a object-oriented programmer do not

require me to use the theory. As a hobbyist knowing the theory I do comes in handy but just because I can read the schematic of my FT757-GX doesn't mean I can properly troubleshoot the rig much less repair it. I could learn (memorize) the theory for the advanced and extra but it doesn't seem worth the time and effort to gain a few more kHz of the spectrum to use. Plus as I said I won't use much if any of that knowledge on a regular basis. Making 18 wpm would not be a problem, a couple of days of serious CW will have my code speed up in the low twenties. (Those two days would be a CW contest but that is a different thread!)
Does this make me a bad guy? I find it amusing to read some of the questions that appear in the various ham newsgroups that I can answer without looking in a book, i.e. 2x2 calls asking questions about simple antennae types and transmission lines. It seems to me that a good number of licensed hams memorized the theory long enough to get their ticket.
Personally I don't think CW is outdated although it is obviously not cutting edge. It is a viable means of basic communication. To build a quality homebrew CW station is does not require as BSEE. Obtaining the parts is far more difficult now however as a junked TV will not suffice. Additionally with CW I can communicate (however minimally) with a foreign amateur who does not speak English. If I query "ur tx?" on CW it is understood and "100 w 6L6 es 807 BT ant dipole 25 mtrs BT" I can understand. Power requirements do not need to be high when using CW. As a novice I almost made 15 mtr WAC from NH using the EICO 720 with weak finals and a longwire with a tuner (missed only Asia).
After all this rambling I again ask:

If the CW requirement is eliminated for HF licensing, how should the theory portion of the exams be modified if at all?
1: no changes
2: some changes but to what degree?
3: serious changes resulting in two license classes
Entry level - today's Advanced theory
Non-Entry level - today's Extra theory
4: no code - know everything else, only one license class with

theory exam comparable to today's Extra

CS> (despite the overwhelming body of technical evidence to the contrary
CS> that "CW is best and gets through where nothing else will."

Please cite the "overwhelming body of technical evidence"
that CW does *not* get through where nothing else will.
SSB comes close, but how many times have you listened
to signal reports being counted out and the listener
gets it right by counting the sounds rather than hearing
the words? That is, in effect, the same as CW.

I'm referring to a 3 and 3 signal report given as
"one two three (silence) one two three" repeated
several times. Of course, you have to be a dx-er
to experience this! ;-)

Source record: 214346

(referring to asking whether the frequency is in use)
>True. But come on. Contesters very rarely do this. Certainly they do it
>less often than hams engaged in most other activities.

I admit, we as a group rarely do this. (I can honestly say I'm an exception) My experience has been that we aren't worse than the amateur community in general though. I can cite more than a handful of QSOs, contest or otherwise, interrupted by non-contesters who chose to CQ, or run a sked, without asking if the frequency was in use. We (at this point, I refer to ALL amateurs!) need to be better about inquiring. AND, we need to be better about ANSWERING when someone else asks! (I can also cite more than a handful of situations where I asked - TWICE - if a frequency was in use, got no answer, called CQ Contest, and then got reamed out for QRMing a QSO...)

Contest segment restrictions will have unintended side effects. First, if we're packed tighter into smaller segments, QRM within those segments increases. If your sked is within one of the contest-allowed segments, you're going to have a heck of a time running it... And, the added QRM will also make it more difficult for the little newcomer, trying to fill out his DXCC or WAS, to get through the QRM. (you'd be amazed how many QSLs I get after a typical Sweepstakes from newcomers wanting Tennessee for WAS.)

Besides, over 50% of the bands are already reserved for non-contesters, in every major event except Field Day and the IARU. During CW contests, you have the full run of the phone bands; during phone contests, you have the full run of the CW bands. And in both cases, the entire 30, 17, and 12-meter bands are open. Not to mention all of VHF and at least half of 160.

(* * * * * CLOSED CIRCUIT ADVISORY * * * * *

EMERGENCY FUNDING

The following is an important closed circuit advisory. Attention all bulletin stations. Newsline is still on the verge of bankruptcy and existing hand to mouth. We have only enough funding to keep us in operation until late November and urgently need your support to survive.

As we have said many times, the decision whether Newsline stays or goes is yours. If you want this service to continue, we will need your ongoing financial support, and it is needed right now.

The address for the Newsline Support Fund is:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

This ends the closed circuit with Newsline report number 1001 for release on Friday, October 18th, 1996 to follow.

(*****
The following is a QST

Did the White House play a part in nailing a Phoenix, Arizona jammer? Find out on Newsline report number 1001 coming your way right now!

(*****
DID PRESIDENT CLINTON HANDLE PHX JAMMER

Did President Bill Clinton or his staff take an active part in bringing a Phoenix, Arizona jammer to justice? That possibility comes to light in a letter received by Arizona Repeater Association Local Interference Committee Chairman Lance Halle, KC7FVX, from the FCC's Beverly Baker. Baker is the Chief of Compliance and Information Bureau. In her letter she says that President Clinton has asked her to personally respond to Halle's inquiry regarding interference problems in Phoenix.

She goes on to mention that an Notice of Apparent Liability to monetary forfeiture in the amount of six thousand dollars was issued to Timothy Hoffman on August 30th. She further states -- and we quote --

"Be assured that the Commission will evaluate the effectiveness of this action to determine weather additional enforcement measures are warranted."

While its doubtful that Bill Clinton asked that the fine be issued against Hoffman, there is more than ample reason to believe that some form of pressure from the White House finally got the FCC to move in this case.

(*****
CITYS TO CHALLENGE FCC

Look for a major court challenge by city planners, community managers and homeowners associations to recent rulings by the FCC. Rulings that forbid states, citys, municipalities, homeowners associations, and even individual landlords from enacting rules forbidding the installation of those pizza sized satellite television dishes.

When it used its power and preempted local jurisdiction and land use regulations to permit anyone to install one of these mini satellite antennas, the FCC said it was doing do to insure that the general public had access to the latest in television transmission technology.

But according to recent news reports, some cities, states and many homeowners organizations disagree. A spokesmen for a coalition of urban planning groups say that the federal government has no right to dictate the aesthetic look of a community. That controlling satellite dishes and any antenna structures must be done on a community planning level.

With both sides now having their views cast in concrete, it will be up to the legal system to decide who has the final word. Urban planners say that they will be going to court in an all or nothing effort to wrestle the power of federal preemption away from the FCC. While it will be many years before any final determination is made, whatever the outcome, the future of many radio services that use visible antennas -- including Amateur Radio -- may well hang in the balance.

(*****
JAPAN TO FIGHT RADIO MODEM HACKERS

Japan says it is going to actively pursue computer hackers, especially those that intercept data using radio modems. Authorities in Japan say that they are setting up a special investigatory unit to combat the spread of computer virus attacks and other electronic criminal acts.

According to news reports, Japan's National Police Agency has requested 2.3 million dollars to fund a plan to actively attack the problem that they see as a threat to their nations national security. A spokesman for the National Police Association says that the money will be used to fund the creation and training of a Security Systems Countermeasures Team. A team that would go after hackers before they have the opportunity to create havoc.

(*****
NOVICE/TECH CONTEST COMING

From the contest log, word that the ARRL Contest Advisory Committee is seriously considering the creation of a contest for Novice, Technician and Technician Plus class operators, tentatively dubbed Sprint NT. Some of the basic rules have been hammered out within the committee, and the League is in the process of seeking membership input to fine tune them.

In general, the contest time period would run from 7 AM Saturday to 1 AM Sunday EST. All Novice, Technician and Technician Plus frequencies may be used. Only Novice, Technician and Technician Plus operators would be allowed to call CQ and the rules would include provision for an "Elmer" to help but not actually make QSOs.

Pending final approval from the ARRL Board of Directors, the contest could come into being as early as next summer. Meantime, the Contest Advisory Committee is seeking membership input regarding the proposed new operating event.

(*****
ENCOURAGING THE DEAF TO GET INTO AMATEUR RADIO

Ham radio should be available to the deaf. So says John Rothert, KC4IYO, of Orlando, Florida.

Rothert reports via the ARRL Letter that he is working with a group of deaf students in central Florida called "New Friends." This is a nonprofit organization for deaf and hearing impaired children. Its purpose is to provide an atmosphere where deaf children can meet to socialize and share learning experiences.

Rothert says that some of the group's objectives are to learn about space science, show how computers can help people communicate, learn about the Internet, spark interest in ham radio, and communicate with the space shuttle.

During the first official New Friends workshop some 25 students found out what Amateur Radio is all about. Each student received a packet of information from the ARRL along with an Archie ham radio comic book and a copy of the Shuttle Amateur Radio Experiment Bulletin put together by AMSAT and the ARRL. Amateur Radio operators demonstrated voice transmission and packet via ham radio and showed how to track the shuttle and other spacecraft. Participants also had a hands-on opportunity to try packet and a table was set up for students to write letters to the astronauts.

The Lake Monroe Amateur Radio Society has volunteered to give Amateur Radio classes designed for the hearing impaired. Several students have already signed up.

Rothert says that he would like to get in touch with deaf and hearing impaired hams. He's also looking for any ideas that may help make Amateur Radio more exciting and inviting for these young people. His address is:

14131 Hunter Grove Dr.
Orlando, FL
32828

(*****
HAMS HELP MASONS

Ham radio has assisted the Masons in a major midwest event.

Amateur Radio operators from the Middle State Amateur Radio Club of Franklin, Indiana provided communications for the annual Masonic home pilgrimage. He year the Franklin based facility invites Masons and Eastern Star members to tour the grounds and visit the facilities.

The amateur radio operators help with parking, give directions and stayed alert for any medical problems that might have occurred during the event.

According to event communications coordinator Bob Doles, WB9AYB, the hams provided an extra sense of security to the many elderly residents and visitors.

(*****
W1FZ AND WIFE HONORED FOR $2 MILLION CONTRIBUTION

Some names in the news. First are Jim and Beulah Thayer who have been honored for their generosity. This, on August 25, 1996, at a dedication ceremony for the new Farmington, New Hampshire, High School.

Jim Thayer is W1FZ. He and his wife donated two million dollars toward the school project.

Arthur Westneat, W1AM reports that several hundred area residents turned out to give the couple a standing ovation and to present them with a watercolor painting of the new school.

Jim Thayer was president of a local bank in Farmington and owned the local telephone company. A ham since 1921, he is also a member of the Great Bay Amateur Radio Association.

(*****
CUSHY WINNER

Ernest Lester, VE2AVX, of Quebec, Canada is the winner of the Project Gold drawing sponsored by Cushcraft at the 1996 Dayton Hamvention. At an award presentation at Cushcraft headquarters in Manchester, New Hampshire, Lester picked up a 24-karat solid gold coin plus the first antenna in Cushcraft's new line of Project Gold series of VHF/UHF mobile antennas. He

also was treated to a guided tour of the Cushcraft plant.

(*****
SA AMSAT ELECTS NEW PRESIDENT

Hans van de Groenendaal ZS5AKV has been elected as President of South Africa AMSAT. He replaces Gerald Klatzko, ZS6BTD who headed up the Southern African Group for the past two years.

Tony Reumerman, ZS6AOG was elected as Vice President with Hennie Rheeder, ZS6ALN as Satellite Development Manager and Laurie Deveraux, ZS5DL as Secretary/Treasurer.

(*****
NEW MIR FREQUENCIES

News from the ham radio space program. Word that a set of new recommended frequencies for future Mir and International Space Station operations has been agreed on and released by AMSAT organizations worldwide. For voice contacts, the recommended channels are 144.45 and 155.47 MHZ uplink and 145.81 MHZ as the downlink. Packet operation will use 144.49 MHZ uplink and 145.81 MHZ to downlink.

A secondary downlink of 145.84 MHZ will be used to avoid interference when the two space platforms are in close proximity. Any simplex operations will probably use 144.45, 145.47 and 145.49 MHZ.

(*****
PHASE 3D UPDATE

Some good news for AMSAT. Jean-Marie Luton who is the Director General of the European Space Agency and Alain Bensoussan, Chairman of the French Space Agency say that the launch of Ariane 502 has now been tentatively set for mid-April, 1997. It is also now confirmed that the Phase 3D International Amateur Radio Satellite will be on this flight. The other payloads are to be a pair of technological measurement packages for validation of the launch vehicle's ability to place two satellites into a geostationary transfer orbit.

(*****
VITA

Volunteers in Technical Assistance -- a service with deep roots in Amateur Radio -- will use its Vitasat technology to carry digital signals for the Global Learning and Observations to Support the Environment program. Globe as the program is known is an Internet based international project that gives primary and secondary school students the opportunity to conduct experiments and take part in environmental studies. For this project, Vitasat will use a transponder provided by Final Analysis Inc. of Greenbelt Maryland that should be launched from Russia later this month.

(*****
DX

In DX, Members of the Oklahoma DX Association are returning to Belau and should be on as we go to air. N5CG and N5OK will be operating all bands from 10 through 160 meters, including the WARC bands on CW and SSB. Normal DX operating frequencies will be used. QSL to the:

Belau DXpedition
Box 88
Morris, Oklahoma
74445

Also, TF1MM, continues to be active as OD5/TF1MM from Naqoura, South Lebanon. This is the UN headquarters and he has been permitted to use a 16 element Log Periodic. He was heard on 14.016 MHZ at 15:45 UTC and on 10.103 MHZ at 19:50 UTC. QSL via 4X4DX.

(*****
SE 6 METER REPEATER

AB5LG reports via America Onlines' ham radio bulletin board that his group has a new 6 Meter Repeater on the Air in Northeast Louisiana. It is installed south of Monroe at 1300 feet and should provide a good indication as to when the band is open to that part of the country. It is on 53.03 MHz out with the input is 1 MHz down at 52.03 MHz.

(*****
MARATHON - MARATHON

On Sunday, November 3rd ham radio will once again participate in the worlds largest non-emergency public service event. Its called the New York City Marathon, and it takes the services of over 400 hams to get it going and keep it going.

And on Marathon Sunday, ARRL First Vice President Steve Mendelsohn, WA2DHF dons yet another hat. That of ham radio communications director for the event:

"It is the biggest event of its type in the world. The biggest organized marathon in America certainly, with 30,000 runners, 12,000 volunteers, 3,000 people on the course. And it is the ultimate showcase for amateur radio to show the public what we do in helping to guide this event to a successful conclusion." WA2DHF

Steve Mendelsohn has been involved with the New York City Marathon almost since its inception. He developed the ham radio communications network used for the event. He says that the public is an important part of what the hams do:

"We are the heart and soul. We are the very central nervous system of the New York City Marathon. Everything runs through our radios and the public is almost glued to the radios listening. We make it a point to have people at the mile points bring little speakers so the public can hear a lot of what is going on and we tie the words amateur radio together with it putting an ARRL supplied yellow amateur radio sign under the speaker." WA2DHF

Again, the New York City Marathon takes place on Sunday, November 3rd.
It will be telecast nationwide on the WB Network.

If you tune in to watch, keep an eye out for WA2DHF and over 400 of your
fellow hams doing what all of us do best.

Ham Radio was the true beginning of the Wireless Internet. It will
ultimately explode. People will have the total ham radio experience
without the licensing as they teleconference freely thru our ether.
What hams do now as a "licensed privilege" will be everyone's
experience - only faster, better, stereo, color, digital, warp
speed, real-time, multi-tasking, AI smart, way kewl, near free,
fun communications with anyone they want to about anything they
want to. The world has shrunk to the size of your computer screen
and soon, you will too!

We can dance along the path and make billions of dollars providing
it or we can clutch our straight keys and resist change. Its
ultimately a personal choice - but certainly in the domain of how
we react to the inevitable, not whether the inevitable happens or
not.

As a rule of thumb, don't settle for less. Get a 64 bit 200 MHz CPU and
start designing things that move and use data as fast as you can.

73!

COLS COLUMN

I HOPE YOU WERE ALL ABLE TO GET A COPY OF THE CONTEST RESULTS
LAST WEEK. I ALSO PUT THE FULL RESULTS ONTO THE PACKET SYSTEM
WW, INCLUDING SUCH ITEMS AS :
QSO POINTS, NR OF MULTI'S, NR OF CONTINENTS AND VK BONUS
POINTS. AS WELL I PUT ONTO PACKET : REMARKS FROM CONTESTANTS,
THE CONTEST MANAGERS REPORT AND THE 97 CONTEST RULES.

GETTING BACK TO THE SERIES REGARDING EARLY TELEGRAPH SYSTEMS,
I MENTION PEOPLES NAMES WITHOUT ANY BACKGROUND KNOWLEDGE OF
THEM. HERE ARE A FEW OF THE PEOPLE MENTIONED SO FAR IN THE
SERIES :

ANDRE MARIE AMPERE (1775-1836). HE WAS A FRENCH PHYSICIST, AND
PROFESSOR OF PHYSICS AT BOURG AND OF MATHEMATICS AT ECOLE
POLYTECHNIQUE PARIS. HE WROTE MANY SCIENTIFIC PAPERS, BUT IS
CHIEFLY REMEMBERED FOR HIS MATHEMATICAL ANALYSIS OF OERSTED'S
ELECTROMAGETIC DISCOVERIES. HIS NAME IS GIVEN TO THE UNIT OF
CURRENT.

WILLIAM FOTHERGILL COOKE. (1806-79). WAS A READER IN MEDICINE
AT DURHAM UNIVERSITY ENGLAND. JOINED THE INDIAN ARMY BUT WAS

INVALIDED OUT. STUDIED ANATOMY IN PARIS AND WORKED IN HEIDELBERG WHERE HE BECAME INTERESTED IN TELEGRAPHY. KNIGHTED FOR HIS WORK ON THE TELEGRAPH.

HANS CHRISTIAN OERSTED (1777-1851). WAS PROFESSOR OF PHYSICS AT COPENHAGEN. RECEIVED THE COPLEY MEDAL FOR WORK ON ELECTRO-MAGNETISM.

SIR FRANCIS RONALDS (1788-1873). HON. DIRECTORY OF KEW OBSERVATORY, WAS KNIGHTED IN 1870 ON THE RECOMMENDATION OF PRIME MINISTER GLADSTONE IN RECOGNITION OF HIS ''LABOURS IN TELEGRAPHIC INVESTIGATIONS''.

BARON PAWEL LOWITCH SCHILLING (1786-1837). MILITARY ATTACHE TO THE RUSSION EMBASSY AT MUNICH IN THE FIRST DECADE OF THE 19TH CENTURY. WORKED IN LITHOGRAPHY AND TRAVELLED EXTENSIVELY IN CHINA AND EUROPE COLLECTING OBJECT OF SCIENTIFIC INTEREST.

COUNT ALESSANDRE GUISEPPE VOLTA (1745-1827). AN ITALIAN PHYSICIST. PROFESSOR OF PHYSICS AT PAVIA IN 1779. PERFORMED EXPERIMENTS IN PARIS BEFORE NAPOLEON WHO STRUCK A MEDAL IN HIS NAME. AWARDED COPlEY MEDAL IN 1791. INVENTED THE 'VOLTAIC PILE', THE FIRST ELECTRIC BATTERY. HIS NAME IS GIVEN TO THE UNIT OF ELECTRICAL PRESSURE.

THATS ALL FOR THIS WEEK, THERE WILL BE MORE THUMBNAIL SKETCHES OF OTHER EARLY EXPERIMENTERS ASSOCIATED WITH TELEGRAPHY LATER WHEN WE GET TO THEIR PART IN THE SUBJECT.

Notes of Interest:

MAYANMAR, XZ. Latest expedition update infos for XZ1N operation report that OH2BH, K5VT, N6BT, AB6ZV, and WA6CDR will arrive in Yangon on Nov. 16th and may even be QRV that evening. A special event station running on Nov. 18th. From Nov. 19th through Nov. 22, three stations will be on all bands and most modes CW, SSB, and RTTY. On Nov. 23rd and 24th, XZ1N will be active in the 1996 CQ World Wide CW DX Contest as a multi-multi entry from Zone 26.

UGANDA, 5X. Peter, ON6TT is passing the following infos concerning the activity from this place.....5X1D will be leaving the country on Oct. 11th and another Swedish ham will replace him. 5X1B is still active from the same QTH, Arua, North Uganda, last week, and is back on the air. QSL manager for Paul is K3SW. Peter reports that QSL cards for his activity as 5X1T are now in printing. His manager ON5NT has all the logs. With this call he made about 8,000 QSO's of which about 1500 in RTTY.

RODRIGUEZ ISLANDS, 3B9. Jon, EA2KL, and Luis, EA3ELM, should be on from Rodriquez Is. around Oct. 31st to Nov. 5th. They plan to be active on 80-10 meters including CW, SSB and RTTY.

The VK2SG RTTY DX Notes are also available on the Internet at reflector digital-dx(at)st.rim.or.jp . and the OH2BUA Webcluster at URL http://www.clinet.fi/jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, WB2CJL at W5KSI.(HASHSIGN)NOLA.LA.NA.

GL de (DX2) Luciano, I5FLN at ZS5S.ZAF.AF

ARLD046 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, The OPDX Bulletin, The Island News, The DX Bulletin, QRZ DX, KA2AEV, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

MARTIM VAZ ISLAND, PY0M. Stuckert, PT2GTI, Paul, PT2NP and Lunkes, PT2HF are now active as ZV0MB on SSB and ZV0MV on CW. Look for them on the SSB IOTA frequencies and 5/10 kHz from the band edge on CW. QSL only via PT2GTI. Cards can be sent either direct or via the bureau. Their land coordinator, Ari, PT2BW, will assist them on the Brazil DX Net on 14240 kHz at 0900z.

TOKELAU, ZK3. The Island News reports Yvette, F3YA, will be active for the next three years as ZK3YA. Look for Yvette on 7003 kHz between 1000 and 1100z. QSL via home callsign.

RODRIGUEZ ISLAND, 3B9. Jon, EA2KL, and Luis, EA3ELM, are planning to be active from here October 31 to November 5. If they receive an OK from the Ministry of Communications in Mauritius, they plan to be active on 80 through 10 meters including the new bands. Operations will be on CW, SSB and RTTY. No QSL information at this time.

BARBADOS, 8P. Jack, K3KG, Steve, callsign not provide, John, N6YRU, and Vic, KI6IM, will be active as 8P9Z as a multi/single effort in the CQWW SSB Contest, October 26 and

27.

TONGA, A3. Bob, W7TSQ, will be active as A35SQ from October 16 to 28. His operation will include participation in the CQWW Contest on all bands except perhaps 160.

FIJI, 3D2. Ron, ZL1AMO, is active from Fiji as 3D2RW. Activity is mainly CW on 80, 40 and 15 meters though he was also heard on SSB operating around 3796 to 3799 kHz at 1145z. Ron stated he would be leaving for Tuvalu soon and would be active as T28RW. QSL via ZL1AMO.

BRUNEI, V8. Look for Hajime, JO1RUR, as V85HG, in the CQWW SSB Contest. QSL via JH7FQK.

BELIZE, V3. Jerry, K0BCN, will activate V31MX from Caye Caulker and will also be participating in the CQWW Contest. QSL via his home call.

ANTIGUA, V2. Look for Team Antigua as V26B with a multi/multi effort in the CQWW SSB Contest. They will be offering special certificates for working V26B on 5 or 6 modes. They will attempt to be active on the new bands, 160 meters and some satellites. QSL information is V26A via N3BNA, V26AK via WB2P, V26B via WT3Q, V26DX via KK3S, V26E via AB2E, V26R via KA2AEV, V26RN via KR2J, V26T via K3MQH, V26TS via KF3P, V26U via WA2UDT and K4VUD via his home call.

QSL MANAGER UPDATE. Whitey, K1VV, states he is not the QSL Manager for EP2EXX. He has been receiving DX QSLs every day for EP2EXX and doesn't know how he got listed as his manager.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 273

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, WU1F, W5IJU & Island News, W7TSQ, WA8JOC, K0DEQ, KI0W, I4UFH, LU6EF, PA3GBQ, PT2NP, PS7AB and SM0BFJ following DX information.

8P, BARBADOS. Jack/K3KG, Steve/(callsign not provide), John/N6YRU and Vic/KI6IM will be active as 8P9Z as a Multi/Single effort in the CQWW SSB Contest, October 26-27th.

9G, GHANA. Steve, PA3GBQ, reports he will once again spend his holiday in Ghana. He will be there in time to participate in the ARRL CW Contest (and possibly the SSB one also). His callsign will be 9G5BQ, and he has some plans to operate from on top of a mountain with nothing between USA and antenna than air. He has not yet decided what category to run (Single Op/ Multi or Single Band). Steve states he will also try to get a

license for 160 meter this year (This is not allowed with a
9G5 callsign.).

COMING EVENTS

OCTOBER 19TH-20TH JARTS WW RTTY

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA
at VK2WI.

In article <54o9vo$lqv@news.ais.net>, carl@ais.net
says...
> So you never have had any understanding of your obligations under Part
> 97.1???

Like a sailboat in a stiff breeze, Carl the troll takes
a new tack. FUD's and strawman logic. Can't win the
first battle so try for something new...tsk tsk
pitiful truly pitiful. Tell me Carl, has the FCC ever
enforced your precious Part 97.1???

Lemme see.. dxing, rag chewing, talking around the
world. According to Carl, useless wastes of amateur
frequencies and illegal according to his precious 97.1.
Yet.. 97.1 (e) continuatioon and extension of the
amateurs's unique ability to enhance international
goodwill HMMMMM according to this amateurs practicing
the forbidden naughty bits (as per Carl) are following
the provisions of 97.1.

Actually, there is nothing in 97.1 that supports Carl
at all.

(a) Recognition and enhancement of the value of the
amateur radio service to the public as a voluntary
noncommercial communications service, particularily
with respect to emergency communications. HMMMM
dealing with emergency communications like hurricane
nets and the like

(b) continuation and extension of the anateur;s proven
ability to contribute to the advancement of the radio
art. Lemme see...nothing here about building your own
equipment. Actually this is open to a wide range of
interpretation.

(c) encouragement and improvement of the amateur
service through rules which provide for advancing
skills in both the communication and technical phases
of the art. AHHH here is Carls' part. Yet, it also
calls for the advancing communication skills..like
CW..a form of communications

(d) expansion of the existing resevior within the
amateur radio service of trained operators, technicians

and electronic experts. HMMMM nothing here that says
anything about EVERY operator having to meet these
qualifications is there??? I can be a trained operator
yet not an electronics expert and still be in
compliance

FUD's and strawman logic
As far as I can see, even an appliance operator more
than meets the requirements of the very rules that Carl
is using to insult the vast majority of operators..
coded and non coded alike.

Once again, Carl's true colors and lack of backbone
shine thru like the troll he truly is tsk tsk tsk
>

> fading channel???
>
> It's bogus to say that 50MHz and up is "all anyone should need" ... it's
> more like "that's all you want to grudgingly give them"
>

Gee Carl, you have access to HF frequencies..what have
you developed lately?? to quote YOU Nothing NADA
ZIP....
Besides with the advent of cable modems and the like,
why would high speed HF modem technology be even
needed. Are you suggesting that this is the wave of
the future. Sounds pretty good to me. A technology
that is good for 3-4 years out of 11...very efficient
use of spectrum.

Hi everyone:

I just saw the ad in the AES Catalog for the Standard C5900DA 6 meter, 2 meter and 70 cm. Tri-Bander and am thinking of getting one since I lost 6 meters when I had to sell my Kenwood TS690S.

My question is whether or not it'd be worth selling (if not trading) my Yaesu FT-5100 Dual-Bander for it. Anyone have any experience operating the C5900DA and if so, what are the pros and cons of this rig???

Many thanks in advance and I look forward to hearing some thoughts on this apparently new rig!! :-)

73's for now my friends!! :-)

>73,

>Bruce, WB4YUC

The big question is: Does your club have repeater coordination to use
the frequency pair 147.595/146.595? These 1 meg frequency pairs,
including this one, has been what they call "local option" for years.
If your local coordinator has issued you coordination for this frequency,
then in your local area this frequency is accepted for use as a repeater
input frequency. If you do not have coordination for the frequency, there
is little you can do to stop him. Even if you have coordination, you can
only inform him that he is interfering with a coordinated system. The FCC
rules state that when an interference problem arises with two users of
a frequency, the uncoordinated user has primary responsibility to
correct the problem and the coordinated user has secondary responsibility.
You cannot force him to stop using the frequency, you can only inform
him of his primary obligation to correct the problem.

Before I receive flames from other repeater owners, I own two repeaters in the Philadelphia area and have been putting up with another owner's (WA3RYQ in Hatfield, PA) remote repeater input/crossband repeater which falls on my input frequency. I have been putting up with this situation for over 8 years. Complaints to this guy from myself and the area coordinators were unanswered. Complaints filed to the FCC by myself and four other users that asked for rules enforcement under this rule of repeater coordination were ignored. I finally received a letter from the FCC that said, "We are sorry, but we no longer get involved with complaints involving amateur repeaters. Refer your problem to your local coordinator". So much for the FCC. They love to make rules that they cannot or will not enforce.

If this guy does not cooperate, remind him that his phone calls are being broadcast to many other people over a much wider area than he may like. Tell him that you will tape record and document the date and time of each call for future evidence of malicious interference. Spread the word about this guy's ignorance of the rules to other repeater owners and users. Although it still has not worked for me yet, I believe that the publicity and the constant pressure from the coordinators and repeater owners will eventually work. The guy who I am having a problem with only has four users of his system. I have a ton of people on my side who constantly bring up the subject with this guy and his four users every time they are heard on the air. I believe that they will get sick and tired of it sooner or later and move their repeater's input/crossband repeater to a frequency assigned for link use.

Good luck!

73 de WA3RVT, Steve

5700. Licensing procedures (was Re: Is the HTX 202 rely as bad as I have been told?)

I passed my Advanced in about 1985. That was when the new question-pool thing was starting. I bought a book with all of the questions and all of the answers and I knew the whole book by heart. I figured I would ace the test easily. Not bad for a Junior in high school.

Well, when I got to the test session, my heart sank. The VE's had made up their own questions! "They're not supposed to do that!" I thought angrilly.

But I started thru the exam anyway. It was _HARD_. I recognized the theory, but the questions were all screwed up. I was fearfull as it was corrected.

I missed 12 questions. (I think you were allowed to miss 13?) Man was I happy. Not only did I get my ticket, but I figured I actually deserved it and that I knew the material. (My call became KE7GW -- you can use that to date this. My dad passed his advanced that day, too.)

Sadly to say, however, I did not understand my extra theory as well. I picked up the extra book, studied it for a week, and passed the exam. Fortunately I

had already passed the code so I didn't have to worry about that. (The code took me 3 tries -- 5 correct, 6 correct, then 7 correct. And I've only made about 3 contacts on CW and will probably never make another. :-( )

(I have built a dipole before, tho! But that's when I was a general...)

>Mike, that's a ridiculous statement ... the "CW forever" crowd DOES
>contain a lot of olde fartz who clearly feel and state that "real ham
>pound brass" and anything else is just so much newfangled, modernistic
>hocus-pocus and they don't want 'nuthin to do with it ... and they don't
>want it cluttering up "their bands" either ...

Carl, that's a ridiculous statement ... while I'm sure that there are some
"CW ONLY!" people in the general ham population (after all, its to be
expected just as there are RTTY-only and SSTV-only people), I don't know of
any of these on the Internet offhand.

There are operators that >operate< CW-only, because they enjoy doing so.
Now, perhaps you'd like to argue that they shouldn't be having fun when
they are on the radio because the Amateur Radio Service doesn't contain
as one of its purposes in Part 97.1 the concept of "having fun". However,
I'm sure Jim and Jeff (the two CW-only operators I know of offhand)
would disagree, and probably think that your latest super-duper gee-whiz
techno-mech radio invention is "boring" to use.

I can understand that viewpoint. Some people consider it a challenge to
use the tools available at hand (notch filters, IF filters, and so on)
to manually tune in a signal and copy some distant station. Having the
computer do it takes all the "fun" out of it. [Personally, I find it
annoyingly aggravating trying to copy someone through my 250hz CW
filter, but if that's what floats your boat, so be it.]

You have yet to grasp the concept that some people enjoy working with
basic systems. Complex systems have complex problems. Why use the
computer to write a short note when a pad and pencil will work just
fine?

Just as you have stated that your support for elimination of the
code exam on HF does not mean you support elimination of HF usage,
nobody in this newsgroup has ever supported restriction on experimentation
and usage of other "high-tech" modes. Some people may not want to >use<
them, but that's their option, just as you have an option not to use
CW if you so desire.

>>Equating one's believe that code testing should be maintained, for a
>>variety of reasons, does not mean that amateurs are hindered from making
>>gains in any of the three areas that you mentioned. HF access will not
>>yield technological progress, increased productivity, or greater

>
>Yes it does, yes it will ... backward requirements for obtaining a
>license are (and have been for decades) keeping qualified people with
>professional training and years of experience from participating in the
>modernization and advancement of our technological base

Oh pluheze, Carl. Do you have >ANY< factual evidence to support this
claim? Just give me a >single< study that someone conducted that supports
this claim.

You keep repeating this claim as if its some kind of gospel. No amount
of repeating it, however, will make it become "The Truth". You can
innovate and experiment on VHF+ just as easily as you can experiment
on HF (assuming, for a moment, that there was no FCC regulations to
hinder experimentation, which is another issue entirely.)

If these technically-competent, qualified people want to get involved
in amateur radio and build all kinds of new techno-gadgets, a 50-question
multiple-choice examination is all that stands in their way.

This was the rationale for the implementation of the codeless tech
license. There is absolutely >zero< evidence to support the claim
that eliminating CW examinations for HF access will in >ANY< way
contribute to any of the three goals that you mentioned.

Will elimination of the examination get some "technically qualified"
people involved? Sure it will. Elimination of any barrier-to-entry
means that a greater number of people will cross the threshold. You
could just as easily call for elimination of the theory examination
to get these "technically qualified" people involved -- because
elimination of either testing requirement means that more people,
by definition, will get involved.

Please explain how granting HF voice access to a bunch of people will
yield these three goals you claim. Explain why the requirement needs
>HF< access, and not merely VHF. Why are these goals not achievable
with VHF+?

>Now I recognize that some of you that I lump with the "pro-code
>Luddites" are really "pro-code I've got mine and now I want to keep
>everyone else out"ers ... I suspect that you're actually in the latter
>category, but you don't want to admit it ...

About the only people I'd like to "keep out" of the hobby are people
who ground their stations to the natural-gas pipe in their houses
(yes, I actually visited an "instant-Extra" ham-shack that did this
very thing).

Of course, I've been accused of having a white sheet and hood hanging up in my closet for years now, so I've grown to ignore most people's criticisms.

Effectively, what it all boils down to is this:
You have no factual evidence to support any of your claims regarding the pro-code crowd in these groups.

The 202 is a great HT in my opinion. I'd like more detail as to how to
change out the battery though. Are the batteries readily available and what's
the stock number? The 202 takes a licking and keeps on ticking!

MacNetscape User at Texas A&M <user@tamu.edu> wrote something quite different from this, but if you ask me, the only real difference between this and what he wrote is the fact that, well, this is probably what really happens. I haven't tried it, but this is probably the way it goes:

IT CAN AND DOES HAPPEN!!

Taking 2 hours to read what follows can change your life:

HOW MUCH DO YOU SPEND ON LOTTERIES? AND HOW MUCH BETTER ARE THE ODDS? HOW MUCH DOES $50 BUY AT MCDONALD'S? DO YOU REALLY ENJOY IT? HOW MUCH DOES ONE MAGAZINE SUBSCRIPTION COST? MORE THAN THIS DOES MOST LIKELY...

I saw an article in an internet newsgroup telling me I could make $2.36 within a month for an investment of only $50. Who'd believe that? It's a scam right? YUP.

****
**Go away!
**DON'T READ ON!!!!!!!!!!!!!!!
****

This is a testimonial from one of the previous suckers. "I thought it was a huge joke. I spoke to my husband, attorney and friends about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it to be me. Of course, I rejected the idea at first. After a short period of about two weeks, I thought 'I have already heard of such things on usenet about a billion times, and boy, they suck.' I decided that even if I had to throw $50 into the fire it might be worth the opportunity to make $2.36. It would hurt my wallet one hell of a lot and gave it a try. After all my wallet could sure use a LOT less than $50 - it's getting kind of heavy."

Two weeks later, I began receiving money in the mail! I could not believe it! Soon pennies and then nickles began to roll in. Within 4 weeks, I had received a total of $2.08! It came from everywhere in the world. My bank account has changed its "+" into a big "-"!!! I bought myself a new box of crackers and other things I had wanted for a long time for my kids, like pocket lint."

Isn't that a horrid testimonial? If you follow the 18 steps below, there is no reason why the same shouldn't happen to you! This is not a legitimate investment opportunity. You invest $50, and you receive virtually no return on your investment. So does the next investor. NOT LEGAL, A CHAIN LETTER-PERFECTLY ILLEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can wind up on the street eating grass and living in a cardboard box, just like me.

The procedure is ridiculous:

1) Write your name and address on 5,000 sheets of paper. Below that, write the words, "Please laugh at me and tell all your friends that I'm an idiot." put a penny or money order for $.01 in each piece of paper, shred 4,995 of them, and mail the remaining 5 to the following adresses:

1. Stimpson J. Cat
911 Sucker ave.
Whatever, SP 90210
Antarctica

2. Wilbur Cobb
Cardboard Box 676
Hobosville, MI 12345
Somewhere

3. Beavis
P.O. Box 10
Highland, WA 72735
USA

4. Butt-Head
P.O. Box 11
Highland, WA 72735
USA

5. (Name witheld because he's too embarassed to say he's part of this scam)
8 Ooga Booga ave., Apt 50,001
Whatever, LMNOP
North Pole

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth on the list. Use a complex graphics engine such as a Silicon Graphics Onyx workstation, or a mainframe in Area 51.

3) Post the article to at least 2,000,000 newsgroups. There are over 25,000, so it should be just about impossible to do this crap. Try posting to as many newsgroups as you can, and the bigger the newsgroup is, the more people are sure to see your message and get ripped off just like you!

You are now in the mail order investment business, and should start seeing returns within a week or ten. Of course, the more newsgroups you post to, the more pennies you get. If you wish to remain anonymous, you may use a pseudonym, call yourself "The Pond Scum", "the Fool", whatever but make sure your address is incorrect. Then again, it doesn't really matter how anonymous you make yourself, because your name is, after all, at #5, but at least you kinda seem anonymous, I guess...

Now, here is why the system works for the guy that invented this scam and no one else:

--When you send you $50 to the people on the list, they are ordered to give all but $.01 to the idiot who thought this up.

--If they don't, well, s/he has they're adress, along with a collection of assault weapons...

--When you're name is at #5, you get $250. However, after fees and stuff, you only take in a nickel.

--We don't want the feds to figure out our little scheme, so we can't tell you the rest.

From time to time, when you see your name no longer on the list, which is going to happen faster than you can say "Look at all those pennies!", take the latest posting that appears in the newsgroups, and send out another $50, and
put your name at #5, and start posting again. Remember, 2 M postings is only a guideling. The more you post, the more people want to blast the crap out of you with an AK47.

Let's review why you shouldn't do this. THE ONLY COST IS $50, AND 5000 STAMPS, AND 5000 ENVELOPES. Anyone can afford $50 (not counting $1800 for postage - calculate it if you don't believe me) for such an idiotic investment with such PUNY RETURNS.

Some people have said "what happens if the scheme is played out an no one sends me any money?" Big deal, so you lose $1850-but what are the chances of that happening? Do you think that NOBODY is interested in an ILLEGAL chance of making such BIG money as $2.36??? And all for a microscopic investment of fifty separate dollars? Just think of all of the new Internet users that join the net every day!!!

Remember--read the instructions carefully, and play fairly. That's the only way this will work. 'Cause if you don't, we have...people...that can deal with you in a rather unpleasant manner.

BAD LUCK TO YOU ALL, and remember, play fair and you'll live.

Blah, Blah, blah....OK..whatever. New technology, CW worthiness debates, holding generation X back, etc., etc...whew. CW may be old hat by today's standards, but it's fun and _POLITE_. I work CW because I don't have to hear this kind of stuff, just friendly rag-chews and DXing.

I'm didn't become a ham to try and develop a new communications method/mode, I'm became a ham because it's fun and relaxing (at least on the digital modes). None of this noise. I can restore old gear, operate AM (!!) if I like (where people are also very friendly!), work DX, etc.. CW never held me back, nor anyone I've tested that actually _tried_ to learn it. I submit that the "drop code" movement is simply on par with the instant gratification mindset that seems to run rampant these days.

BTW, I know several codeless techs in the area who are involved in developing new technologies, building modern equipment, etc. The codeless license does exactly what you ask for...allows them access to everything above 50 mhz where they can experiment until their heart's content. The fact that they don't have access to _everything_ hasn't even slowed them down.

Hi Jim. This is true if the feedline impedance is different than that of the antenna/transmitter. If you use 50 ohm feedline with a 50 ohm antenna/transmitter, any length is acceptable. If you substituted say, 75 ohm feedline, you would need to cut the feedline in 1/2 wl multiples (the impedance is repeated every 1/2 wl).

Since we will all be using digital modes in the future according to
the "Anti-Code" prophets and will likely be keyboarding alot, how
about we drop the code requirement for a typing requirement
starting at 30 wpm up to 60 wpm for higher classes of licenses???
Sounds as good as the other ideas presented around here!!

There's one more way that cable length can affect VSWR. If common-mode current is present (that is, current is flowing on the outside of coax, or the currents in twinlead aren't equal and opposite), the feedline becomes part of the antenna. In that situation, changing the length of the feedline changes the antenna itself, which will affect VSWR.

VSWR can seem to change with cable length if the characteristic impedance of the VSWR meter isn't the same as that of the cable. I've measured RG-58 at over 60 ohms Z0, and a couple of cheap SWR meters I've looked at were off also, so I imagine this is a fairly common occurrence. In this case, the SWR doesn't really change with feedline length, but the SWR meter says it does.

> So you never have had any understanding of your obligations under Part
> 97.1???

I understand a lot more than you think. I know this is a service, but it's also a hobby. You don't know me or my contributions to amateur radio, but I can say that for the last 22 years I have given until it hurts, and sometimes beyond. I've gone WAY out of my way to help newcomers, taught countless ham radio classes (even multiple general class classes and novice/speed CW classes), administered 100's of amateur exams, etc. However, there are no obligations that say I have to spend time developing your latest fade-resistant high-speed HF modem technologies (on a band where the baud rate is limited by law...). I _KNOW_ how easy it really is to work within the current system and upgrade, and I don't feel that it's hampering the development of emerging technologies.

> >I submit that the "drop code" movement is simply on par with
> >the instant gratification mindset that seems to run rampant these days.

Right...fill up the bands with voice ops, "kicker back". What kind of hi-tech CFR 47 Sec. 97.1 work on the HF spectrum are you screaming about?

Pfffttt...do you realize that most any of the VHF/UHF/SHF bands have more available spectrum than all of the HF allocations put together? This arguement still sounds like "I want it _all_, I want it the easy way, and I want it right now_"...

-=-
More Updated Information and Stations
to be active in this weekend's CQWW SSB DX Contest
-=-

3E, PANAMA. Roger, DL5RBW, and Andy, DL8RBR, are taking part in the Contest from Guenter's (HP1XVH's) QTH on Contadora Island (NA-072) as 3E1DX. Before the contest they will be active as HP1/homecall on the WARC bands and RTTY.

4M5, LA ORCHILA ISLAND. 4M5X will be the callsign used (not YV1OM from La Orchila Island as previously announced) for a Multi/Single entry from YV5JDP's QTH in Caracas, Venezuela. Operators are: WM2C, YV5JDP, YV5EED, YV5AMH, YV5LWM, YV5MHX and maybe a few others. QSLs for 4M5X, as for previous 4M5X operations, go to the WS4E mail drop. WS4E is not the QSL manager, but will get your QSLs to Caracas in a safe fashion. Please include sufficient postage for return from Venezuela.

AY7, ARGENTINA. Claudio, LU7DW, states he will sign AY7D in the contest as a Single OP/Single Band on 15 or 10 meters depending on the propagation.

C31, ANDORRA. Operators C31LD, C31LJ, and EA3NY have decided to be active in the contest as C31LD on 6 bands for this weekend. QSL via VE3HO. There have been many requests for them on 160. Look for them on 160 (1.837 +/-) around sunrise 0615z both mornings.

ED9, CEUTA. Jose, EA7KW/EH7KW, states the EA9EA group will be active as ED9EA as a Multi/Single entry from Ceuta.

FS, ST. MARTIN. Remeber to look for WX9E and N0BSH to operate as a Multi-Single using their host's QTH and call, FS5PL. They are currently

there and have been quite active on the bands especially on the low bands and WARC. They are currently signing FS/homecall and QSL via their homecalls. They are returning to the states on October 29th. QSL FS5PL via WX9E ONLY for 1996 ARRL CW & SSB and 1996 CQ WW SSB contests. Other FS5PL QSLs go to KG0UI or FG5BG.

NH2, GUAM. Four operators will be active as NH2C as a Multi-Single entry. Operators will be: JI3ERV/NH2C, JG3RPL/KF6BJ, JR3RVO/WX8M and JR7OMD/WI3O. QSL via JI3ERV. Their Sunrise/Sunset: 2014z/0756z. They suggest to look for them between 7075-7100 kHz on 40 meters.

KH0, MARIANA ISLAND. Look for KH0A (not KH0AM!) to be active as a Multi/Single. Operator will be JA1WSX/KH0Y, JE2PCY/AC6TN and JF1MIA/KH0A. QSL via JF1MIA, or bureau (which will be much appreciated). JF1MIA; Takashi Sugawara, 1-12-14 Kamisueyoshi, Tsurumi, Yokohama, Kanagawa 230, JAPAN

SV, GREECE. A radio amateur association of West Greece (RAAWG> will take part in the contest as SV1AFA. They will operate from Vlochos Mountain at an altitude of about 1000 meters! Their actual QTH will be inside the local monastery along with the cooperation of the local authorities. This place is also famous in Greece because of its archeological value. Near the monastery are the ruins of Thestieon acropolis which was constructed by King Laertes of Ithaka, father of the famous Odysseus from the Greek ancient mythology. Their contest category will be Multi-Op/Single with activity on 160-10 meters. QSL via SV1CIB.

TK, CORSICA. TK1A will be active instead of TK2C as announced earlier. Members of the Corse DX-Gang and the Bavarian Contest Club are taking part in the contest as a Multi/Multi class. QSL-information is: DF7RX, Bernhard Steibl, Kelheimwinzerstr. 40, D-93309 Kelheim or via bureau (DARC).

V26, ANTIGUA. Team Antigua will be active as V26B as a Multi-Operator/ Multi-transmitter catagory. In addition, the Team would also like to announce that both the 5 band and 6 band Certificates of Appreciation will be available once again for the 1996 operation. Briefly, to qualify for these Special Certificates of Appreciation you have to work V26B during the CQWW SSB Contest period on either 5 bands or to receive the Special Certificate of Appreciation, 6 bands! Members of Team Antigua will also make special attempts to be active on the WARC Bands, RTTY, 160 meters, as well as some Satellites! QSL via WT3Q.

YB, INDONESIA. Joerg, YB1AQS will participate as Single OP Allband from Bandung, West Java - Indonesia. He will be using a 3 element Quad at 65 ft. high on high bands. He will be looking especially for all of America (N-Middle-S) during contest.

YW1, VENEZUELA. The Paraguana Team in Venezuela will activate the contest station YW1A during the contest. The operator will be Italo, YV1AVO, and the category will be Single Operator Single Band (20 Meters) Phone.

ZX0F, FERNANDO DE NORONHA. Look for the Araucaria DX Group again to be active as ZX0F as a Multi-Op/Single. Operators are: PY5CC/Peter, N5FA/Jim, PY5EG/Oms, PY0FF/Andre and PY5GU/Gus. QSL via PY5EG, Atilano de Oms, P.O.Box 37, Curitiba - PR CEP 80001, BRAZIL

LATEST PROPAGATION FORECAST - "KH6BZF REPORTS"
BAD NEWS: A Geomagnetic Storm (MS) occured starting @ 23/0001 UTC due to Solar Winds from suspected Coronal Hole activity. This Minor Storm (MS) was forecasted to disrupt polar path and lessen DX. Hopefully this storminess will subdue by Friday, otherwise we are in for a long and very frustrating contest weekend.
Sorry, Lee, KH6BZF

Yes, it looks like we are getting close!

Talked to FCC representative "Gladys" on 10/22 at the toll free number
and was told the following:

1. Gate Two day one apps should all be entered in the "next few days"

2. All calls will then be issued in one batch, and should show up on
internet ftp sites and subsequent relay services the next day.

3. They will be mailed out within a few days from that point. (so the
earliest word will be via the internet)

Hope this all comes to pass!

John

>>Why aren't you an ARRL member?

I question your motives, Raymond, in posting these so-called "results" here for us.

The questions are poorly worded. The overall "poll" is negative in tone, thereby enticing a biased audience to respond.

And, apparently, no one can enter their own response - or further explanation of their responses.

5720. Importance of coax length on HF A myth?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-24 00:00:00 UTC
From: jpoll@redrose.net
Message-ID: <54nc7a$s6@lily.redrose.net>
Source record: 214163

Hi.

I have a friend who swears up and down that the length of the coaxial cable to maintain resonance at a given frequency is important for reducing the SWR. He feels that it acts in a similar principal to the fact that the elements of an antenna must be cut to the correct length for the antenna to be resonant at a given frequency.

It seems to me I have also read somewhere that this is a myth. I need the true scoop on this. I'm preparing to put up a pretty good antenna system on my roof (a homebrew 10 meter antenna cut to exactly the middle of the band), and don't want to purchase an extra 6 ft of Belden 9913 coax only to have it looped up and losing signal, when in reality I could of used 20 feet instead of 26 feet of cable.

Please carbon copy any responses to this post to jpoll@redrose.net so I don't miss any good info.

Thanks

Jim

Well Gary, sorry to say it, but this is the result of that "exams should be entry class license oriented because amateur radio is a life-long learning process; exams are not meant to be graduation exams" attitude that you have.

That kind of attitude gives us exactly what you see here. Advanced-class hams that can't change batteries, extra-class licensees who can't build dipoles, and the list goes on and on.

Does anyone know what happened to the Callbook Server Summary that usaully posts the FCC's new callsign activity for the previous day? It hasn't been updated since the 21st.

I've also noted that I cannot download any forms from the FCC. The FCC's computers don't seem to be responding.

I wonder if these two incidents are related?

I'm looking into purchasing either the FT8000 or FT8500 mobiles in the next couple of months.

First off, I have a 1997 Ford Escort. Are there any known problems between this escort and either radio?

I am a big scanner enthusiast, so I'm headed towards the 8000. I currently have an ICOM 2AT as my transceiver and a Uniden Bearcat 800XLT scanner. Both are powered from my cigarette lighter. I'd like to toss them both aside and put in a single radio instead. Using these radios when driving can be someone annoying.

The Bearcat has nasty out-of-band interference when scanning. I'm hoping to get rid of that with the mobile. I'd get a separate scanner and transceiver, but the flexibility of the FT8000 seems cost effective and function sufficient for me. I live in a good-size city.

Can the 8500 be modified for the receive capability of the 8000? If not, I pretty much have my answer.

Thanks for any input on these models.

Carl, you change tactics as often as people change
socks. What new technology?? I defy you to show any
of the techno wizardry you keep whining about!!! What
is going to save the HF bands from commercial use??

Oh I'm sorry, you don't have any new technology to
offer. My mistake, you're onl;y throwing out FUD's and
strawman thoughts to scare people in dropping the code
so people like YOU, the under achievers of amateur
radio can get on HF frequencies other than 10M phone or
on your case phoney.

Maybe if you can name some of this new technology,
you'd have more support.

Not user replaceable ? Hogwash ! The user must be able to operate a soldering iron, but there are no great issues involved (just two tabs to the battery). Did it myself for almost nothing (cost of the battery, 2" of electrical tape).

Other than that, I have found the 202 to be a good basic radio. I carry it for things I do not want to risk the 'good' HT doing. It's been used and abused hard over the last several years, and still perks along fine. A good basic HT in my book.

Matt

5727. VHF SSTV frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-24 00:00:00 UTC
From: johnl@world.std.com
Message-ID: <Dzs3Ct.1Dr@world.std.com>
Source record: 214170
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital

Many people still think of SSTV as an HF activity, but
from conversations with many people it is clear that most
of the recent growth is on VHF. Although the recommended
2 meter frequency is 145.5 MHz, many regions are using
different frequencies because they are using repeaters.

I've started compiling a list of these frequencies and
net schedules but still have a long way to go. If you are
using SSTV on VHF or UHF, I'd be very grateful for the
following information:

Location (city/state/country):
Frequency (above 30 MHz only):
Input Frequency (if repeater used):
Days and times of local nets:
Information source (your call if you want to be
mentioned as the information source or leave blank):

Please respond by e-mail to JohnL@world.std.com rather than a
followup to this post. I will publish the results after placing all
the responses in a table.

Thanks & 73, John WB2OSZ

Hold on guys-
When the Radio Shack guy says that the memory battery is not user replacable - - He really means that nobody with the expertise of a Radio Shack Salesman can replace it. It is an easy replacement for anyone than can open the case, unsolder the battery, and resolder a new one in. There is one gotcha tho. Radio Shack does not have the battery listed in there battery catalog, or at customer service. You have to get it from there techs or elsewhere. It's just like the power connector for the HX-212. Try ordering that from radio shack, you will have better luck and better service from Mouser. Too bad Mouser doesn't have walk-in service. They would drive RS out of business. (The way Tandy profits and their stock has plumented, maybe they will be out of business anyway) It may be time to dump the VP they picked up from Shoney's. Are you listening Fort Worth?

I wonder if the FCC computer will be able to really run all those apps
in one batch? Even if it does, I imagine they will want to "review" a
few random calls before releasing the whole mess of them out to us.

I still expect a couple weeks but I would not mind being proved wrong
:-)

Nice try, but KD7MK (formerly WB7AHD) was licensed long before
any of the "dumbing down" you complain about. That just proves
that the tests don't screen for the amateur can do spirit, and
never have. He earned admission to the laboratory, but like the
horse led to water, we can't make him drink. That's an internal
motivation he either has or he hasn't.

Gary

>reality I could of used 20 feet instead of 26 feet of cable.

Ok, this can get complex because there are several interrelated
things happening here. Lets take them one at a time.

The only thing that determines SWR on a transmission line is
the ratio of the characteristic impedance of the line to the
impedance presented by *the load*. Nothing you can do at the
generator end can affect SWR, and changing the length of the
cable won't change SWR either (but see below).

However, changing the length of the line will change the impedance
presented to the generator. That's because a transmission line with
any SWR other than 1:1 acts as a transmission line transformer. By
changing the length of the line, you get an effect similar to, but
not quite the same as, changing the turns ratio of a transformer.
The SWR doesn't change, but the impedance presented to the generator
does. This can be useful, and is employed frequently for impedance
matching purposes. The most common such is the quarter wave matching
section.

In general, the impedance transformation will be complex, IE it will
be in the form of R+jX, where X can be capacitive or inductive depending
on cable length. The Smith Chart can be used to determine the transformation
effect by following the constant SWR circle around the chart for different
cable lengths (measured in wavelengths at the frequency of interest) and
reading out the R and X values. Note that the SWR is constant, but the
impedance presented to the generator changes with varying cable length.

Now something else can happen too, and this is where some of the
myths have arisen. If you feed a balanced antenna, such as a dipole,
with an unbalanced transmission line, such as coax, the *outside* of
the outer conductor of the transmission line can become part of one

arm of the dipole, and antenna currents can flow down the outside
of the transmission line.

Picture the dipole as a 1/4-wave section connected to the coax inner
and an L shaped element consisting of the other arm of the dipole and
the *outside* of the coax outer conductor. This can change the *load
impedance* presented to the transmission line because the antenna geometry
has been altered from a physically balanced dipole configuration, and
thus can change the SWR. Changing the coax length changes the effective
length of one leg of the dipole, and that changes the impedance presented
at the load end of the coax, and that changes SWR in the coax.

Coax transmission line currents flow on the outside of the inner
conductor and the inside of the outer conductor. This is because
of skin effect. The physics of coax forces the currents to be
equal in magnitude and opposite in direction. The opposite currents
cancel any radiation fields, and the coax doesn't radiate. But that
doesn't affect currents flowing on the outside of the outer conductor.
Those currents are independent of what's happening inside the coax.
Their radiation fields aren't canceled, and the coax becomes a radiating
part of the antenna.

Generally, it is undesirable to have antenna currents flowing on
the outside of the coax because it will alter the radiation pattern
of the antenna, alter its feedpoint impedance, and because it can
cause "hot shack" problems in some cases. The cure is to use a choke
balun at the antenna feedpoint to decouple the outside of the coax
from the antenna element to which the inside of the outer conductor
is connected. (A choke balun can be simply a few turns of the coax
tightly coiled just before connection to the feedpoint. Or it can
consist of a number of ferrite beads slipped over the coax near
the feedpoint. Its purpose is to act as a high impedance to currents
trying to flow down the *outside* of the coax outer conductor.)

When you use such a balun, or if you are feeding an inherently
unbalanced antenna such as a groundplane mounted vertical, then
the coax doesn't become part of the antenna, so it can't change
the load impedance presented to the coax, and thus can't change
SWR. Any length coax can now be used without affecting SWR, or
antenna radiation pattern.

So you can see, there is some truth to the myth that coax length
can alter SWR, but it isn't quite the way many amateurs picture
it. The reason it can happen is because the coax has become an
unintended part of the antenna due to a failure to properly deal
with the unbalanced to balanced connection at the antenna feedpoint
with a balun.

5737. Historical callsign database?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-24 00:00:00 UTC
From: drewbob@mit.edu
Message-ID: <54o3p9$na8@senator-bedfellow.MIT.EDU>
Source record: 214180

Is there such a thing? Seems like a good idea to me, especially with the vanity call system. It'd be nice to be able to look up who held a certain call previously, see the history of a callsign, etc. Also, it would be fun to be able to see a particular person's complete ham history...a database with *all* previously held callsigns, rather than just those held in uninterrupted sequence. (For instance, my records show that I was previously N1QHF (briefly), but a historical database would also show that I was WB1AFX back in the late 70's, and that there was a license lapse.)

Is there a database like this? Is anyone working on one? Probably too much work...

drewbob@mit.edu Andrew aa1hx (for now)

I think we should do like all the other newsgroups. Let everybody post
whatever they want to post. If the above is SOP for Usenet, you have
a few thousand people who post daily that haven't read it yet.

How do you make everyone aware of the above ? Do you post it every
day ?

I think the whole atmosphere would change here if people would start
doing selective reading, instead of reading everything and complaining
about having just read something they didn't want to read.

Don't shoot the posters, shoot the readers......

Mike, that's a ridiculous statement ... the "CW forever" crowd DOES contain a lot of olde fartz who clearly feel and state that "real ham pound brass" and anything else is just so much newfangled, modernistic hocus-pocus and they don't want 'nuthin to do with it ... and they don't want it cluttering up "their bands" either ...

>Equating one's believe that code testing should be maintained, for a
>variety of reasons, does not mean that amateurs are hindered from making
>gains in any of the three areas that you mentioned. HF access will not
>yield technological progress, increased productivity, or greater

Yes it does, yes it will ... backward requirements for obtaining a license are (and have been for decades) keeping qualified people with professional training and years of experience from participating in the modernization and advancement of our technological base ... this is clearly counter to the purpose and goals of Part 97.1 and it must change for the future of ham radio.

Now I recognize that some of you that I lump with the "pro-code Luddites" are really "pro-code I've got mine and now I want to keep everyone else out"ers ... I suspect that you're actually in the latter category, but you don't want to admit it ...

The length of coax doesn't change the VSWR, assuming it's all the same
impedance. However, the impedance at the transmitter output will be a
function of cable length if the VSWR is not 1:1. Ultimately what
matters is not the VSWR, but the impedance match to the transmitter.
All that is required is a conjugate match so that the transmitter sees
a resistive load of the right resistance at the output device.

There is one way that the coax length affects VSWT. If the attenuation
is high the VSWR gets better with length. Someone once said a good low
power load for 144 MHz is 100 ft of RG-58. It doesn't matter too much
what's on the far end.

Sorry Carl, I didn't lose anything. You lost your argument, I didn't. I simply said (I know you have limited HF experience, Carl, so you may not understand this) that the numbers of those having access to the HF bands must be limited to a reasonable number to prevent world-wide QRM. VHF and UHF are line-of-sight, so these bands do not have the potential for interference that HF does. You can scream your lies and misrepresentations all you wish, but you're wrong on this, and you know it.

To other readers who may not know what we are discussing, Carl insists on wasting space by reposting using a different heading so no one will see that I have already replied under another heading. Let me simply say, please read my answer to his ridiculous, phoney allegation that I posted under the thread "Re: Nother Pro-Code Luddite".

Thank you for ignoring this ridiculous double-post, cross-post of Carl's.

Nope, it's a good thing, Carl. It is a fair and impartial filter, to limit the quantity of ham operators to a reasonable number.

>
> It also panders to another view that seems to be widely accepted amongst
> Luddites ... that "honest work is necessary to prove one's 'worth'" ...
> this, of course is YOUR work ethic, and it's bogus, too ...

That's a big problem in society today, I believe, there are too many who believe just like you, Carl, that an honest work ethic is something to be sneered at, just as you sneer at and lie about those who want to maintain standards. One may reasonably infer, based on the above sentence, that

since you dont believe that honest work proves one's worth, you believe
that either "dishonest work" or "no work" will prove one's worth. Which
is it? Too many today are just like you, want something for nothing,
"'cause I *deserve* what others have worked hard to earn, so lower the
standards to meet me, so I won't have to measure up to the standards."

> the ONLY
> criteria for deciding who gets/doesn't get a license should be "Are they

>

Carl, if you don't have some kind of a "work ethic", you wont be able to
get "technically qualified" either, unless you advocate they cheat.
The government's *job* is to make and enforce the rules. Your opinion of
how they should carry on their business is only your opinion. The
government has every right to "force" you to learn morse to get a better
class license, Carl. "Cuz Uncle Sam says so" is a good enough reason. I
have said before, and say again, if you believe the FCC is unjustly
forcing you to demonstrate knowledge of morse code, get a lawyer and file
suit in federal court. Keep us posted here how you are getting along.

>

You said morse has been around since the turn of the century, and is
still in use today throughout the world by multitudes of people,
therefore it has stood the test of time, and has not been abandoned. Your
silly "minimal amount of technical knowledge and common sense" charge
against all the hams who still use morse code is ridiculous. I wonder how
some of those higher license class hams who have supported you in your
quest to drop morse testing, but said they still use and like morse code,
feel to hear *you* say that morse has been abandoned by *everyone* with a
minimal amount of technical knowledge and common sense? I would be
offended by your slanderous remark, if I were they.

>

Well, bless my soul, you made my case for me. So you admit there are circumstances when your vaunted digital modes are not better than older modes, like voice. My point is that in like manner there are times when CW is a more effective means of communications for a ham than digital modes or even voice. Thanks for your help in making that point.

>

Nope, I haven't said it, and I don't say it now. Your statement is an out and out lie. I have never said I oppose any other legal mode of communication for hams, period. Readers are invited to go to DejaNews and read all my posts to see for themselves that I have said no such thing.

> >Spread Spectrum is
> >illegal on HF, so yes, you're right about that, I oppose using illegal

No red herring at all. Spread Spectrum is indeed illegal on HF. The only fishy thing around here is your statements, because they contain so many falsehoods! I don't oppose any modes - you oppose CW mode, but I don't oppose any, on HF or elsewhere, except I oppose illegal ones, like Spread Spectrum. If it should be legalized some day, why, I won't oppose the use of it. I welcome new technology.

>
> >Your statement is ridiculous. You merely fabricated this little

>

Everyone can see that your "anti-technology" charge against those who support code testing is ridiculous. Technology and morse code are not even directly related. People trapped by an accident have communicated with rescuers by tapping morse code; flashes of light have been used, as well. Morse has been used by hams using underlying technology ranging from vacuum tubes to transistors. So you fabricated the notion that pro-coders are anti-technology, or "Luddites", and everyone can see it for the straw-man it really is. It is totally bogus.

> >Can't you decide whether it is a mode or a technology? Do you

> >mode, despite your dislike of it.
>
> OK, it's BOTH a mode and a technology ... you can call it either and it
> still doesn't matter ... it's backward, whichever term you use ...
>

Nope, it is not technology, but simply a mode that can be used on a variety of "physical layers" of technology.

> >There are different modes of transportation: i.e., walking, horseback
> >riding, driving a car, and flying. Each mode of transportation has its
> >place.
>
> Not too many people commuting in rush-hour freeway traffic on their
> horses .... (maybe you pro-coders would, if someone hadn't had the good
> sense to ban horses from the freeway system)

You are so silly, Carl, to think everyone goes to work on a freeway. Some folks are ranchers and farmers. In most cases, horseback is still a better method of rounding up livestock on a ranch or farm than driving a toyota, Carl. Horseback sometimes makes more sense as a mode of transportation than an automobile.

>
> >Sometimes it is more appropriate to walk than drive, and in some
> >situations horseback is more appropriate than driving a car. Driving
> >is often cheaper than driving.
>
> "Driving is often cheaper than driving." ???? Well, I guess that makes
> as much sense as any of your other ridiculous statements, Jim.

I meant to say, "Driving is often cheaper than flying." Driving is often more efficient than flying, for instance, for going short distances, or to places without an airport.

>
> >CW is cheaper than most modes to set up.
>
> SO WHAT?????? Cheap is NOT the primary metric

It is if you don't have a lot of money to spend.

> ... besides, high-tech is
> not necessarily expensive ... as I said, I've got a freaking telephone
> with 100 MIPS of DSP processing capability in it ... chips are cheap ...

All this baloney is totally irrelevant to the issue of morse testing. The reason that telephones are cheap is that they are mass produced. Huge manufacturing volumes mean low costs. OTOH, low volumes mean high costs. As I say, your argument about DSP is irrelevant, because I like DSP, I am for DSP, it's technology and I love it, do you get it? I like technology, I just don't favor your fishy, smelly brand of balogna.

> the fact that you fear them and can't understand how they work and the
> benefits they can provide is TOTALLY irrelevant (as are you, in todays
> world)
Well thank you, Carl, for that vote of confidence, but I am not afraid of telephones. I use phones every day and know full well the benefits they provide, just like everyone else. If I am as relevant as a telephone, then I must be pretty darn relevant!

> >So
> >the morse mode still has a legitimate place in the amateur's repertoire
> >of communications modes.
>
> Bullshit! It's a horse in a jet helicopter world ...

Why don't you try riding down a bridle path in the woods in your jet helicopter? See if the trees don't damage your rotors. Can't you see that the horse still has a use in some situations, even though there are other modes available that are useful, but not always as apt for a particular purpose?

>
> >> >The bogus notion that morse testing is holding back

> >
>

I disagree. Our asserting that continued morse testing is desirable and necessary does not label us. *You* are the one coming up with the labels, like "Luddite", because you are unable to come up with anything like reasonable arguments to support your absurd positions.

> OK, now we're getting to reality ... YOU don't want more people on
> "YOUR" HF bands (they might get too crowded for your antiquated
> methods), so you want to mantain a "filter" to "keep newcomers out"
>

There you go again, Carl, trying to put words in my mouth, when you can't get any intelligent ones out of your own. I never said they were *MY* HF bands. The morse code "filter" only keeps out those "newcomers" who are

unwilling to put forth the effort to learn morse code. Anybody who is not handicapped can learn morse code, just like thousands before them have learned it, and been licensed.

> THAT IS PROBABLY THE FIRST HONEST STATEMENT YOU'VE MADE IN THIS ENTIRE
> DEBATE!!!
>

It is really quite funny to hear you scream about someone making honest statements, when you wouldn't know honest if it "snuck up on you and bit you." It's even more ridiculous coming from one who sneered at those who "have an honest work ethic," like you did above.

> >Via the morse testing requirement, our government is fulfilling its
> >responsibility to restrict the numbers of those who have access to the HF
> >bands.
>
> Our government HAS NO SUCH "responsibility" ... what bullshit!

Sure. The FCC has been tasked with responsibility for the spectrum. If it doesn't have the responsibility to protect the integrity and viability of the spectrum, then it doesn't have any responsibility for it at all.

>
> >If they did not, so many americans would get on HF as to destroy

My colors are red, white, and blue. What are yours?

>
> Just how would we "destroy the bands?" I would submit that without
> huge increases in the number of hams world-wide, the bands will CEASE TO
> EXIST in a few years because governments will not be able to justify
> allocating such a precious resource to so few who put the resource to
> such piss-poor uses ...

You can submit that foolishness all you want, but we don't have to accept it, just because Carl says it. Our HF bands are not in any danger of being taken away. I don't believe that many hams are in your camp when you say that our ham bands are being put to "piss-poor uses". That is total nonsense. If you have any proof to support your theory that using CW on HF is endangering our HF allocation, please produce it, otherwise everyone will know you just made it up.

>
> >I admit that making the tests much tougher technically would accomplish

>
> The "filtering objective" is pure bullshit!! It is something conceived

> in one of your technically ignorant nightmares, rooted in your own
> insecurity in the worth of what you practice, and fed by the fear that
> progress and change will prove what you fear most ... that you're
> inadequate technically to compete and survice in today's world ...

Oh, I'm surviving quite well. If I am so "technically inadequate" how is it that I am able to show your illogic for the garbage it is? If I, being so "technically inadequate" can defeat you in debate so easily, just imagine what a really smart fellow could do! I have never claimed to be a member of the Mensa Society, or an inventor, or a genius, like you have. I won't brag about any accomplishments because my personal qualifications, like yours, are totally irrelevant to the question.

>
> >However, that would unfairly exclude those who
> >are not scientists or engineers.
>
> Ridiculous ...

You may think that excluding those who are not scientist or engineers is ridiculous, but I don't, and I don't think all those hams out there who are not scientists or engineers think so either. If you want to associate with your fellow engineers, join IEEE, Carl.

>
> >The truly dedicated will learn morse

> >effort at low cost, and doesn't discriminate against anyone.
>
> First, this is just more of you wanting the government to force your
> (backward) mode of preference and your "work ethic" on everyone ...

Unlike you, I don't think there is anything wrong with having a "work ethic". If the government wants to require people to work to get a ham license, then it has every right to do so. Of course, to hear you talk, you know more than the government, so they should let you say what the requirements are, what legal bandwidths and mode are allowed, etc.

>
> secondly, yes it DOES ... it discriminates against anyone who thinks
> that YOUR prefered mode is a waste of time and has no relevance in
> today's world (i.e. anyone with a better grasp of technology and the
> real world than you ...)

Well, using your same warped illogic, the written tests discriminate against those who think that theory and math are "a waste of time." Morse testing has relevance, because it keeps the numbers of HF qualified hams to a reasonable number.

>
> >Carl, the FCC does not, I hope, share your expressed desire to see
> >millions of additional hams jammed into the already crowded HF bands.
>

> *You* think they're "already crowded" ... I doubt the FCC would agree
> .. the ham bands probably have the smallest user/MHz radio of any
> service ... and the worst "utilitzation factor" too, I'm sure ...

They must agree with me, since they are the ones who are limiting access to HF through morse testing. Here's a challenge for you, Carl: using the propagation charts in one of the ham magazines, try dividing the number of hams with HF access into the number of MHz available at any particular hour of the day and see how it comes out. I realize that since you don't operate on HF, you probably don't know very much about propagation. You probably think every ham band is available all the time, 24hrs a day. So you probably have been running your receiver up and down 80m during the day, and not hearing many QSO's. Or perhaps you tune around on 15m or 17m at night, hear nothing but static, and say to yourself, "Why, there's nobody on these bands. We need to get millions of new hams licensed so we can fill them up, or the FCC might tune around like I am, hear that they are not being used, and take them away from us." So I guess one can explain your "utilization factor" nonsense by recognizing your ignorance of the difference in propagation between VHF and HF.

>
> >don't bother bringing up your "If the bands get crowded, we'll all move
> >to Spread Spectrum" argument, because Spread Spectrum is illegal on HF.
>
> That's why we need to get the antiquated, outdated, ARRL/Luddite amateur
> radio rules UPDATED, despite your protestations ..

Notice, everyone, he does not deny the fact that Spread Spectrum on HF is illegal.

>
> >Spread Spectrum is not likely to be allowed anytime soon on the HF ham
> >bands for reasons of national security.
>
> In making this statement, your lack of understanding is clearly revealed
> once again ... Give us a break ... it's being used ROUTINELY in consumer
> items like cordless phones, computer lans, etc. ... there IS NO
> legitimate national security reason not to permit it on HF ... NONE ...

Carl, whose ignorance is showing? Don't you know that cordless phones don't use HF? Who are you trying to kid! Does your cordless phone use a 20 meter yagi? I don't think so. And, yes, there is a very good reason for them not allowing it on HF. In a previous post, Jim Reid did is well enough already. I am enclosing a copy of his excellent post, below:

Subject: Spread Spectrum on the HF Ham Bands
From: "Jim Reid" <jreid@aloha.net>
Date: 1996/10/06
Message-Id: <01bbb3e0$07e4c520$LocalHost@jim-reid-1>
Organization: At Home
Newsgroups: rec.radio.amateur.policy,rec.radio.amateur.misc

Spread Spectrum modulation techniques have been suggested
as the solution to band crowding. Also the technique is said to
be an excellent weak signal, dense signal environment
mode for amateurs.

Well there are problems not being considered by those proponents
of this technology. As Carl, and perhaps others have noted,
there are restrictions about modulation techniques for the
HF amateur bands. Why?

Not because of technology problems; but because of so called
"National Interests". What?

Recall the QPSK modulated radio I mentioned a few days ago.
About 25 years ago this radio was developed to allow the direct
microwave transmission of the new Bell System T1 TDM/PCM
carrier. This innovation of the Bell Labs would allow many more
POTS (plain old telephone signals) on a pair of twisted copper
wires than was poosible with the existing FDM technique, which
was then being used to modulate FM microwave radios for
transmission across large distances at lower cost than wire
trunks.

A radio was developed which could accept more than one T1
circuit and squirt it all out on a single 2gHz band beam. The
transmitted signal was a type of spread spectrum sort when
viewed with a spectrum analyzer. It further developed that two
such radios could simultaneosly use the same frequency if the
beams were cross polarized at the microwave antenna: this
meant a whole lot of POTS channels all together in the same
spectrum space at the same time. This was a great commercial
development, was dutifully and excitedly written up per the proper
format, and all submitted off with much data to the FCC for the
anticipated Type Acceptance so marketing and the revolution of
the phone system could begin!

But some weeks later, back came the package, disapproved!!??
Why? It worked beautifully well.

The FCC routes these Type Acceptance documents off to other
government agencies for a chop, identity is not important here.
But the problem, as explained to us was that the signals could
not be decoded by a casual observoer. A who?? To demodulate,
and understand the POTS information was the problem. An
interceptor of the signal must have apriori knowledge of the QPSK
scheme in order to copy the information content. It seems
it is in the national interest of the United States, at times, to be
able to do this, even to telephone common carrier traffic, a la
court approved "wire tapping", but in this case tapping in and
demodulating the microwave signals!! So certain things were
modified, the unnamed government agencies were satisfied,
and Type Acciptance was, at last, given.

Amateur signals have characteristics of interest to a sovereign nation beyond the parameters we usually consider. Our HF signals can be detected, that is they are not somehow hidden, for example below the thermal noise level of the ktB sort plus system noise; they are open for anyone to receive, demodulate and understand the information being transmitted (amateurs are prohibited from transmitting covertly or to convey commercial, paid for, traffic, for example), therefore the FCC still maintains monitoring stations, among other things, for example, to assure the common carrier tariffed operators that amateurs are not carrying commercial traffic. So the FCC sees to it that no amateur band signal is transmitted which is non-detectable nor non-decipheralbe/demodulatable (if that is a word). And, it is in the national interest, at times, to be able to deny the transmission of signals carrying information. So amateur band signals are all of a sort that are easily detectable by present US government monitoring equipment, and could, if needed, be denied (jammed).

For these reasons alone, the possibility that any amateur band transmission at HF will ever be sanctioned which could operate below the noise level, simultaneously with many others of the same sort, using spread spectrum techniques which allow them to be separately detected and individually demodulated (which does require apriori knowledge about unique and individual transmission parameters by both transmitter and recipient) will NEVER be allowed in the U S of A ! Each such signal must have a unique parameter other wise it could not be separated, detected and decoded from among the other simultaneous spread spectrum signals. Technology is not the problem, but because it might become detrimental to the sovereign interest. Further, such spread spectrum signals at HF, as being proposed, could not be separately and individually selected for denial to a particular recipient by jamming; all signals in the spectral region would also be jammed, or more nicely, denied.

We will surely be getting along fine with RTTY (and others of the sort), CW and SSB for years to come on the HF amateur radio bands. All are easily detected and copied by those agencies with sufficient interest to do so. Even the so called "closed" HF packet signals going off to bulletin boards, etc.

We will continue to do the sorts of things HF amateurs have enjoyed doing for decades; but with much more sophisticated digital techniques of signal processing as some others have discussed recently here on the newsgroups.

Just some more thoughts on another rather warm Sunday afternoon an hour or so befor the first Great Debate!

73, Jim, AH6NB

Jim's excellent post requires no commentary from me.

>
> You just want "to filter out the hordes, so 'YOUR' HF bands aren't
> overcrowded" ... and you like the idea of having your "work ethic" crap
> forced on everyone else ... once again, you're pathetic

I never say any of the bands were mine. I have priviledges granted to me by the FCC in the form of an Extra Class License, so I have permission to use all legal modes in all amateur bands. I got my license because I met the FCC qualifications for it. I'm not forcing anything on anyone. I may be pathetic, but I can sure handle the likes of you, Carl, so what does that say about you?

I'm sure
> that if T.O.M. could come back from the grave, he'd put you near the
> head of the list for the W.H. because you're truly a LID ...

If your ham operating is like your newsgroup posts, then you might have a problem, but I wouldn't. Sticks and stones . . .

> ignorant of
> technology, no spirit of adventure/invention, bigoted, backward, and
> with an "I've got mine, so screw you!" attitude that would have pissed
> him off seriously ...

At least I knew SS was illegal on HF. It takes a strong stomach and a spirit of adventure to debate with you, so I have demonstrated that. It is true I don't "invent" lies and slanders like you do, so in that sense, I am not an inventor. You are the one who belittles others for using CW. I don't belittle anyone. Instead of the attitude you describe, my attitude is a very positive one: "If anyone wants to get a ham license with HF priviledges, I suggest they learn the rules and regulations, theory and math, and the morse code, then take the various tests from a nearby VE, and get all the priviledges the government allows." That's not an attitude, it's the law.

73,
Jim - AD4VL

Oh, yeah? How do you propose that they develop and test the latest fade-resistant high-speed HF modem technologies without access to the HF fading channel???

It's bogus to say that 50MHz and up is "all anyone should need" ... it's more like "that's all you want to grudgingly give them"

and should depress the button NOW.

Came across this old gem on my hard disk. I'm not sure of the original
author (I *think* it is Danny, K7SS, of "QRP is for Sissies" fame)

Enjoy.

News Release:

QCAO Reorganizes

The Quarter Century Appliance Operators was founded in the
early 1950's by a small group of Amateur Radio operators from
the Pacific Northwest. They had been active in their hobby for
over 25 years, yet still lacked the basic knowledge of radio
electronics and had no idea of how their equipment worked.

They banded together to try and protect each others honor
and pride. At radio gatherings and club meetings in the 1950s
one was considered unworthy of the name Ham Radio Operator if
he or she couldn't not only name components, but know how to
solder them together and make a radio work, or fix a broken set!

When faced with insults and dreision, those few hardy
pioneers banded together and formed the First Chapter and
National Organization of the QCAO. This was known as the "Cold
Solder" Chapter. They even coined the now-famous club byword
"e pluribus ignoramae" which is Latin for "We don't have to know
how to solder, we just wanna talk on our radios."

No veterans of that first chapter are known to be active on
the air today. In the late 1950s and early '60s, with the
worldwide interest in science and space and technology, the QCAO
membership went underground.

It is with great pride and dignity that today in the 1990s
the revived QCAO stands ready to rise from the ashes, and become
the standard of mediocrity it once proudly was. In honor of
those first pioneering members, QCAO hereby invites all eligible
applicants to step forward and join!

The benefits of QCAO include not only the pride of
membership. Think of the warm glow you will feel at club
meetings and gatherings showing off your new all-plastic

imprinted QCAO pocket protector! And that's not all! For your minimal membership fee, you will also receive a handsome, suitable-for-framing, certificate of honor, with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available. Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.

Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!

You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!

"e pluribus ignoramae"

==========

Great!

There are only 660,000 or so hams in the United States. This money
making spectrum should not be given away to just a few. If the ARRL and
the hams want the space let them bid on it. If the pro CW'ers who are
bent on code got together they could pay to have a code only spectrum.
Lets just see how bad the ARRL and hams in general want this specturm.
Like the old line says, "Money talks, Bull**** walks".

<huge snip>

>Gary

In general, the correct length of coax for an HF antenna is the
distance it takes to get from the transmitter to the antenna. Don't
worry about length.

Sure, and we'll end up with even less of a signal-to-noise
ratio than we have now. It can *ONLY* get worse as we get more
and more neophyte USENET readers who don't bother to learn even
the basics of what is expected on USENET.

>How do you make everyone aware of the above ? Do you post it every
>day ?
>

No, you send a copy of it to posters who violate the convention.
Yes, they may receive a few hundred, or more copies. That's known as
a "learning experience." The rational poster will then realize that
there are social conventions that should be observed in USENET,
just as in face-to-face conversations.

>I think the whole atmosphere would change here if people would start
>doing selective reading, instead of reading everything and complaining
>about having just read something they didn't want to read.

The problem with the "selective reading" theory is that you're placing
the burden of weeding the chaff out on the innocent reader, instead of
the entirely reasonable expectation that people who post will do so with
a modicum of intelligence as to the newsgroup subject. If I go to a lecture
about microwave construction techniques, I have a reasonable expectation
that the speaker will discuss stripline techniques when I get there. If
he starts discussing flower arranging, the audience has every right
to boo him off the stage until he gets a clue. Is it so unreasonable
to expect the same, here? Especially when we have the equivalent of
the flower-arranging class next door, in rec.radio.swap?

It's possible to use a cable with an impedance not equal to the characteristic impedance of your antenna and rig. For example, a half wave length of 75 ohm cable will work between a 50 ohm antenna and a 50 ohm transmitter. You can also use 75 ohm cable to match a 100 ohm antenna to a 50 ohm rig by cutting it to the right length. Unfortunately, these tricks generally only work at one frequency.

In this case, the length of the cable is critical to a given frequency.

There's absolutely nothing to changing the battery. Unscrew the back of
the case, lift out the circuit board you see, unsolder the battery, and
solder in the new one. Don't worry about the stock number - it's a
generic 3V li cell that can be purchased anywhere. Even at Radio Shack :-)

John, all the above could very well happen, on the internet. But will ham radio become the internet ? I am missing something in the discussion of all the hi-teck stuff here somewhere. If I want to talk to my Mom across the world on the Webphone, what's that got to do with ham radio ? Isn't there a certain 'fun' aspect to ham radio that we experience by communicating with a radio with someone else ? Will the 'fun' still be there if anyone who has a Visa card and a computer store in their neighborhood can jump in and do it ? It seems to me the internet is for the computer hobbyist, and that ham radio is for the RF hobbyist. Maybe I am confused. Anyway, Grandpa Lenny will like the 'warp speed' stuff you mentioned.

5761. Looking for early Italian Callbooks

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-24 00:00:00 UTC
From: Wolfango Horn <wolfango@globe.it>
Message-ID: <32705984.2EC6@globe.it>
Source record: 214204

My father, Walter G. Horn - i4MK, an OM pioneer of the radio in Italy and author of technical papers in QST and QEX, is writing a book about the beginnings of radioamateur transmissions in Italy.
Unfortunately, both ARI (italian branch of IARU) and Telecommunications Department are not able to provide any callbook of italian radioamateurs operating from 1935 to 1940 in Italy.
Such callbooks were destroyed during the II World War.
He would be happy to have OMs' assistance in looking for them.
He firmly believes such a callbook could be traced, perhaps as a part of international radioamateur callbooks of that period, in USA, so the aim to complete his laborious compilation could be attained.
Thanks in advance. 73 & 51.

In <326EACF1.566E@gte.net>, Jim Conn <jconn@gte.net> writes:
>
>Doesn't stop any technological progress at all. Technology marches on,
>every day, so how can you claim we have stopped it?

OK, so you're not *totally* successful ... but that's just incompetence,
not because you don't try ... (to resist the spread of new technology)

>A bogus argument, and
>you know it. Besides, we pro-coders are for technical progress on all
>fronts.

Bullshit! ... if it's not done with a key and doesn't make "di di duh
duh" sounds, it's too modern for you ...

>> Morse code testing IS holding back progress in ham radio by keeping out
>> more technically-inclined individuals who have no use for
>> turn-of-the-century, nostalgia methods ...
>
>That morse testing is holding back progress in ham radio is a completely
>gratuitous assumption on your part. Morse testing does keep out those
>who don't want to learn the code, but it lets many in those who are
>technically-capable (the written tests) and willing to achieve something
>worthwhile through honest effort (the morse code test).

That morse testing is NOT holding back progress ... is a completely
gratuitous assumption on YOUR part ... you admit above that it (Morse
testing) does keep out those who don't want to learn the code (the
technically-inclined, progressive one, that is ...) That's clearly a
Bad Thing ... (except to you Luddites, who hate to see anyone with
progressive ideas get into ham radio ...)

But then, you try to somehow twist that into a Good Thing by saying "but
it lets in those who are willing to achieve something worthwhile
through honest effort (the morse code test)." This is a completely
bogus assumption that panders to YOUR idea that "the code is worthwhile"
.. which the real world has rejected in EVERY OTHER RADIO SERVICE ...

TODAY's world does not agree that Morse code is worthwhile, or they'd be
using it ... but they're not ... they abandoned it in droves DECADES ago
in favor of better things ... ONLY hams are stupid enough to cling to it
in quasi-religious dedication ...

It also panders to another view that seems to be widely accepted amongst
Luddites ... that "honest work is necessary to prove one's 'worth'" ...
this, of course is YOUR work ethic, and it's bogus, too ... the ONLY
criteria for deciding who gets/doesn't get a license should be "Are they

technically qualified to assemble and operate an amateur radio station without harming themselves or the public and/or creating interference to other hams or other services?" Period, end of story, nothing more, nothing less ... your work ethic has NO bearing ... it is NOT the government's job to force it on me, Joe Blow, or anyone else ...

>Carl, can't you see that the fact that morse code is a communications
>mode that has stood the test of time is a point in its favor, not against
>it? Besides, the relative age of a mode does not directly relate to its
>effectiveness.

NO ... and nobody else sees it that way either ... Morse has not "stood the test of time" ... it FAILED it miserably decades ago and was abandoned by everyone with a mimimal amount of technical knowledge and common sense (which left you out ...)

>Otherwise, I'm sure aircraft would be using a digital
>data mode to communicate with the air traffic controllers in the tower
>instead of voice.

DUH! They ARE to a significant degree ... reporting of altitude, flight number and other information is automated ... and commercial flights transmit volumes of routine data of all types to/from the ground using digital systems ... cockpit voice is used for ATC because it places less of a burden on the attention of the air crew in crowded airspace maneuvering situations than other modes (because voice is a "natural" form of communications, the crew can talk and drive at the same time with less distraction from driving than code or typing messages on a keyboard ...)

>> and the advocates of
>> continued Morse testing are, for the most part, the same ones who

>> necessity for modernization ... yup LUDDITES ...
>
>This is not a true statement. "Most" pro-code adherents do not oppose
>other methods. In fact, I don't know of any.

That's another lie on its face ... you, yourself do ... and you've said it over and over again ...

>Spread Spectrum is
>illegal on HF, so yes, you're right about that, I oppose using illegal
>modes.

RED HERRING ALERT!!!!!!! There are lots of non-spread spectrum modes that are much better than CW and you oppose them, too ... just because you "like" CW and it's not "scary" to you like that modern stuff you can't understand ... (or accept)

>Your statement is ridiculous. You merely fabricated this little
>"anti-technology straw baby" so you could pin the "Luddite" label on it
>and try to call it a pro-coder.

I didn't fabricate you pro-coders ... hell, I'm trying to stamp out your
narrow-minded, backward ideas ...

>> >Morse code
>> >is not a technology, but a communications mode.
>>
>> And an antiquated one at that ... but you pro-code Luddites insist on
>> maintaining it as a licensing requirement, despite the fact that
>> everybody ... outside of ham radio ... has abandoned its use in > foavor
>> of more modern, more efficient technologies ... yup LUDDITES ...
>
>Nope, not! Can't you decide whether it is a mode or a technology? Do you
>switch back and forth as the occasion arises? You agree it is a mode,
>then in the same sentence say everyone has abandoned the "technology."
>Morse code is a mode, not a "technology", and it is still an effective
>mode, despite your dislike of it.

OK, it's BOTH a mode and a technology ... you can call it either and it
still doesn't matter ... it's backward, whichever term you use ...

>There are different modes of transportation: i.e., walking, horseback
>riding, driving a car, and flying. Each mode of transportation has its
>place.

Not too many people commuting in rush-hour freeway traffic on their
horses .... (maybe you pro-coders would, if someone hadn't had the good
sense to ban horses from the freeway system)

>Sometimes it is more appropriate to walk than drive, and in some
>situations horseback is more appropriate than driving a car. Driving is
>often cheaper than driving.

"Driving is often cheaper than driving." ???? Well, I guess that makes
as much sense as any of your other ridiculous statements, Jim.

>CW is cheaper than most modes to set up.

SO WHAT?????? Cheap is NOT the primary metric ... besides, high-tech is
not necessarily expensive ... as I said, I've got a freaking telephone
with 100 MIPS of DSP processing capability in it ... chips are cheap ...
the fact that you fear them and can't understand how they work and the
benefits they can provide is TOTALLY irrelevant (as are you, in todays
world)

>So
>the morse mode still has a legitimate place in the amateur's repertoire
>of communications modes.

Bullshit! It's a horse in a jet helicopter world ...

>> >The bogus notion that morse testing is holding back
>> >progress in technology is patently ridiculous.
>>
>> No, it's patently TRUE, but the assertion that maintaining Morse testing
>> is necessary and desirable in today's world flies in the face of reality
>> and labels you and your co-advocates as modern-day LUDDITES ...
>

CHECK THIS OUT BELOW**********

>Sorry, Carl, but your claim doesn't hold water. The morse test serves as
>a very nice filter to restrict to a reasonable number those who have
>access to HF.

OK, now we're getting to reality ... YOU don't want more people on
"YOUR" HF bands (they might get too crowded for your antiquated
methods), so you want to mantain a "filter" to "keep newcomers out"
THAT IS PROBABLY THE FIRST HONEST STATEMENT YOU'VE MADE IN THIS ENTIRE
DEBATE!!!

>Via the morse testing requirement, our government is fulfilling its
>responsibility to restrict the numbers of those who have access to the HF
>bands.

Our government HAS NO SUCH "responsibility" ... what bullshit!

>If they did not, so many americans would get on HF as to destroy
>the bands world-wide, not just here in the U.S. Foreign hams have a right
>to use the bands as well as Americans.

How outrageous!!!!!!!!!!!!!!!!!!!! But I'm glad to see your true
colors finally showing through ...

Just how would we "destroy the bands?" I would submit that without
huge increases in the number of hams world-wide, the bands will CEASE TO
EXIST in a few years because governments will not be able to justify
allocating such a precious resource to so few who put the resource to
such piss-poor uses ...

>I admit that making the tests much tougher technically would accomplish
>the filtering objective.

The "filtering objective" is pure bullshit!! It is something conceived
in one of your technically ignorant nightmares, rooted in your own
insecurity in the worth of what you practice, and fed by the fear that
progress and change will prove what you fear most ... that you're
inadequate technically to compete and survice in today's world ...

>However, that would unfairly exclude those who
>are not scientists or engineers.

Ridiculous ...

>The truly dedicated will learn morse
>code to get a license, since it can be accomplished with reasonable

>effort at low cost, and doesn't discriminate against anyone.

First, this is just more of you wanting the government to force your (backward) mode of preference and your "work ethic" on everyone ...

secondly, yes it DOES ... it discriminates against anyone who thinks that YOUR prefered mode is a waste of time and has no relevance in today's world (i.e. anyone with a better grasp of technology and the real world than you ...)

>Carl, the FCC does not, I hope, share your expressed desire to see
>millions of additional hams jammed into the already crowded HF bands.

You think they're "already crowded" ... I doubt the FCC would agree .. the ham bands probably have the smallest user/MHz radio of any service ... and the worst "utilitzation factor" too, I'm sure ...

>don't bother bringing up your "If the bands get crowded, we'll all move
>to Spread Spectrum" argument, because Spread Spectrum is illegal on HF.

That's why we need to get the antiquated, outdated, ARRL/Luddite amateur radio rules UPDATED, despite your protestations ..

>Spread Spectrum is not likely to be allowed anytime soon on the HF ham
>bands for reasons of national security.

In making this statement, your lack of understanding is clearly revealed once again ... Give us a break ... it's being used ROUTINELY in consumer items like cordless phones, computer lans, etc. ... there IS NO legitimate national security reason not to permit it on HF ... NONE ...

You just want "to filter out the hordes, so 'YOUR' HF bands aren't overcrowded" ... and you like the idea of having your "work ethic" crap forced on everyone else ... once again, you're pathetic ... I'm sure that if T.O.M. could come back from the grave, he'd put you near the head of the list for the W.H. because you're truly a LID ... ignorant of technology, no spirit of adventure/invention, bigoted, backward, and with an "I've got mine, so screw you!" attitude that would have pissed him off seriously ...

Carl - wa6vse
carl@ais.net

5767. Jim Conn's OUTRAGEOUS pro-code agenda finally revealed

Date: 1996-10-24 00:00:00 UTC
From: carl@ais.net
Message-ID: <54mkjn$ku9@news.ais.net>
Source record: 214253
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Please read this in its entirety ... it starts out a bit slow, but Jim really loses it towards the end and reveals the REAL pro-code agenda ... to restrict the number of US hams on HF to save the bands for foreign hams ('cause more US hams would "destroy the bands") HIS WORDS, NOT MINE

In <326EACF1.566E@gte.net>, Jim Conn <jconn@gte.net> writes:

>
>Doesn't stop any technological progress at all. Technology marches on,
>every day, so how can you claim we have stopped it?

OK, so you're not *totally* successful ... but that's just incompetence, not because you don't try ... (to resist the spread of new technology)

>A bogus argument, and
>you know it. Besides, we pro-coders are for technical progress on all
>fronts.

Bullshit! ... if it's not done with a key and doesn't make "di di duh duh" sounds, it's too modern for you ...

>> Morse code testing IS holding back progress in ham radio by keeping out
>> more technically-inclined individuals who have no use for
>> turn-of-the-century, nostalgia methods ...
>
>That morse testing is holding back progress in ham radio is a completely
>gratuitous assumption on your part. Morse testing does keep out those
>who don't want to learn the code, but it lets many in those who are
>technically-capable (the written tests) and willing to achieve something
>worthwhile through honest effort (the morse code test).

That morse testing is NOT holding back progress ... is a completely gratuitous assumption on YOUR part ... you admit above that it (Morse testing) does keep out those who don't want to learn the code (the technically-inclined, progressive one, that is ...) That's clearly a Bad Thing ... (except to you Luddites, who hate to see anyone with progressive ideas get into ham radio ...)

But then, you try to somehow twist that into a Good Thing by saying "but it lets in those who are willing to achieve something worthwhile through honest effort (the morse code test)." This is a completely bogus assumption that panders to YOUR idea that "the code is worthwhile" .. which the real world has rejected in EVERY OTHER RADIO SERVICE ...

TODAY's world does not agree that Morse code is worthwhile, or they'd be using it ... but they're not ... they abandoned it in droves DECADES ago

in favor of better things ... ONLY hams are stupid enough to cling to it in quasi-religious dedication ...

It also panders to another view that seems to be widely accepted amongst Luddites ... that "honest work is necessary to prove one's 'worth'" ... this, of course is YOUR work ethic, and it's bogus, too ... the ONLY criteria for deciding who gets/doesn't get a license should be "Are they technically qualified to assemble and operate an amateur radio station without harming themselves or the public and/or creating interference to other hams or other services?" Period, end of story, nothing more, nothing less ... your work ethic has NO bearing ... it is NOT the government's job to force it on me, Joe Blow, or anyone else ...

>Carl, can't you see that the fact that morse code is a communications
>mode that has stood the test of time is a point in its favor, not against
>it? Besides, the relative age of a mode does not directly relate to its
>effectiveness.

NO ... and nobody else sees it that way either ... Morse has not "stood the test of time" ... it FAILED it miserably decades ago and was abandoned by everyone with a mimimal amount of technical knowledge and common sense (which left you out ...)

>Otherwise, I'm sure aircraft would be using a digital
>data mode to communicate with the air traffic controllers in the tower
>instead of voice.

DUH! They ARE to a significant degree ... reporting of altitude, flight number and other information is automated ... and commercial flights transmit volumes of routine data of all types to/from the ground using digital systems ... cockpit voice is used for ATC because it places less of a burden on the attention of the air crew in crowded airspace maneuvering situations than other modes (because voice is a "natural" form of communications, the crew can talk and drive at the same time with less distraction from driving than code or typing messages on a keyboard ...)

>> and the advocates of
>> continued Morse testing are, for the most part, the same ones who
>> vigorously reject and oppose the introduction of more modern methods
>> like the various digital, spread spectrum, and similat techniques ...
>> out of ignorance, fear, and a lack of ability to appreciate the
>> necessity for modernization ... yup LUDDITES ...
>
>This is not a true statement. "Most" pro-code adherents do not oppose
>other methods. In fact, I don't know of any.

That's another lie on its face ... you, yourself do ... and you've said it over and over again ...

>Spread Spectrum is
>illegal on HF, so yes, you're right about that, I oppose using illegal
>modes.

RED HERRING ALERT!!!!!!! There are lots of non-spread spectrum modes
that are much better than CW and you oppose them, too ... just because
you "like" CW and it's not "scary" to you like that modern stuff you
can't understand ... (or accept)

>Your statement is ridiculous. You merely fabricated this little
>"anti-technology straw baby" so you could pin the "Luddite" label on it
>and try to call it a pro-coder.

I didn't fabricate you pro-coders ... hell, I'm trying to stamp out your
narrow-minded, backward ideas ...

>> >Morse code
>> >is not a technology, but a communications mode.
>>
>> And an antiquated one at that ... but you pro-code Luddites insist on
>> maintaining it as a licensing requirement, despite the fact that
>> everybody ... outside of ham radio ... has abandoned its use in > foavor
>> of more modern, more efficient technologies ... yup LUDDITES ...
>
>Nope, not! Can't you decide whether it is a mode or a technology? Do you
>switch back and forth as the occasion arises? You agree it is a mode,
>then in the same sentence say everyone has abandoned the "technology."
>Morse code is a mode, not a "technology", and it is still an effective
>mode, despite your dislike of it.

OK, it's BOTH a mode and a technology ... you can call it either and it
still doesn't matter ... it's backward, whichever term you use ...

>There are different modes of transportation: i.e., walking, horseback
>riding, driving a car, and flying. Each mode of transportation has its
>place.

Not too many people commuting in rush-hour freeway traffic on their
horses .... (maybe you pro-coders would, if someone hadn't had the good
sense to ban horses from the freeway system)

>Sometimes it is more appropriate to walk than drive, and in some
>situations horseback is more appropriate than driving a car. Driving is
>often cheaper than driving.

"Driving is often cheaper than driving." ???? Well, I guess that makes
as much sense as any of your other ridiculous statements, Jim.

>CW is cheaper than most modes to set up.

SO WHAT?????? Cheap is NOT the primary metric ... besides, high-tech is
not necessarily expensive ... as I said, I've got a freaking telephone
with 100 MIPS of DSP processing capability in it ... chips are cheap ...
the fact that you fear them and can't understand how they work and the
benefits they can provide is TOTALLY irrelevant (as are you, in todays
world)

>So
>the morse mode still has a legitimate place in the amateur's repertoire

>of communications modes.

Bullshit! It's a horse in a jet helicopter world ...

>> >The bogus notion that morse testing is holding back
>> >progress in technology is patently ridiculous.
>>
>> No, it's patently TRUE, but the assertion that maintaining Morse testing
>> is necessary and desirable in today's world flies in the face of reality
>> and labels you and your co-advocates as modern-day LUDDITES ...
>

CHECK THIS OUT BELOW**********
HERE'S the REAL pro-code agenda ...

>Sorry, Carl, but your claim doesn't hold water. The morse test serves as
>a very nice filter to restrict to a reasonable number those who have
>access to HF.

OK, now we're getting to reality ... YOU don't want more people on
"YOUR" HF bands (they might get too crowded for your antiquated
methods), so you want to mantain a "filter" to "keep newcomers out"
THAT IS PROBABLY THE FIRST HONEST STATEMENT YOU'VE MADE IN THIS ENTIRE
DEBATE!!

>Via the morse testing requirement, our government is fulfilling its
>responsibility to restrict the numbers of those who have access to the HF
>bands.

Our government HAS NO SUCH "responsibility" ... what bullshit!

>If they did not, so many americans would get on HF as to destroy
>the bands world-wide, not just here in the U.S. Foreign hams have a right
>to use the bands as well as Americans.

How outrageous!!!!!!!!!!!!!!!!!!!! But I'm glad to see your true
colors finally showing through ...

Just how would we "destroy the bands?" I would submit that without
huge increases in the number of hams world-wide, the bands will CEASE TO
EXIST in a few years because governments will not be able to justify
allocating such a precious resource to so few who put the resource to
such piss-poor uses ...

>I admit that making the tests much tougher technically would accomplish
>the filtering objective.

The "filtering objective" is pure bullshit!! It is something conceived
in one of your technically ignorant nightmares, rooted in your own
insecurity in the worth of what you practice, and fed by the fear that
progress and change will prove what you fear most ... that you're
inadequate technically to compete and survice in today's world ...

>However, that would unfairly exclude those who
>are not scientists or engineers.

Ridiculous ...

>The truly dedicated will learn morse
>code to get a license, since it can be accomplished with reasonable
>effort at low cost, and doesn't discriminate against anyone.

First, this is just more of you wanting the government to force your
(backward) mode of preference and your "work ethic" on everyone ...

secondly, yes it DOES ... it discriminates against anyone who thinks
that YOUR prefered mode is a waste of time and has no relevance in
today's world (i.e. anyone with a better grasp of technology and the
real world than you ...)

>Carl, the FCC does not, I hope, share your expressed desire to see
>millions of additional hams jammed into the already crowded HF bands.

You think they're "already crowded" ... I doubt the FCC would agree
.. the ham bands probably have the smallest user/MHz radio of any
service ... and the worst "utilitzation factor" too, I'm sure ...

>don't bother bringing up your "If the bands get crowded, we'll all move
>to Spread Spectrum" argument, because Spread Spectrum is illegal on HF.

That's why we need to get the antiquated, outdated, ARRL/Luddite amateur
radio rules UPDATED, despite your protestations ..

>Spread Spectrum is not likely to be allowed anytime soon on the HF ham
>bands for reasons of national security.

In making this statement, your lack of understanding is clearly revealed
once again ... Give us a break ... it's being used ROUTINELY in consumer
items like cordless phones, computer lans, etc. ... there IS NO
legitimate national security reason not to permit it on HF ... NONE ...

You just want "to filter out the hordes, so 'YOUR' HF bands aren't
overcrowded" ... and you like the idea of having your "work ethic" crap
forced on everyone else ... once again, you're pathetic ... I'm sure
that if T.O.M. could come back from the grave, he'd put you near the
head of the list for the W.H. because you're truly a LID ... ignorant of
technology, no spirit of adventure/invention, bigoted, backward, and
with an "I've got mine, so screw you!" attitude that would have pissed
him off seriously ...

This is amazing. An Advanced class licensee who can't change a battery.
It's just a standard off the shelf 3 volt lithium cell soldered in by
two tabs. Unlicensed computer owners change the lithium cells in their
computers, surely an Advanced amateur can handle that simple little chore.
It certainly isn't rocket science. An amateur is not supposed to be just
a *user*, so the "no user servicable parts inside" disclaimer doesn't
apply.

Chet:

You posted this in at least 30 arbitrary and unrelated newsgroups. This is called spamming, and is very extremely rude in terms of Internet etiquette. As a veteran of 15 years in the DC folk music scene, I can also assure you that as a method of advertising an upcoming concert, it is singularly ineffective.

Please stop now and don't do this again. I'm writing you in the hopes that you're simply clueless and not a habitual spammer. If I thought otherwise, I would send my complaint to your service provider. When a service provider gets over a thousand or so complaints about one account, they tend to figure that that account is not worth the trouble, and that account tends to go away. That's how this Internet thing works; you have been warned.

Thanks very much, Brian. I haven't had time yet to d/l any of the more lengthy lists you cited, but as a newbie here, your post struck me as another wonderful instance of learning one of those "things-you-always-wanted-to-know-but-how-on-earth-would-you-look-something-like-that-up?" In the Spanish language, because many sounds are elided to perhaps a greater degree than in English, the phonetic alphabet is especially useful. About 10 years ago, in Taxco, Mexico, I listened as a hotel clerk spelled out my last name over the phone to a reservationist in Acapulco, our next stop. The alphabet she used seemed to consist of given names, mostly male. I still remember her phonetic version of "Strain" because I've since used it many times myself. It went, "Ese Saul, te Tom&#65533;s, ere Ram&#65533;n, a Antonio, i Ignacio, ene Norma." Thanks again.

This message is a VERY brief
attempt to explain the hobby and give some pointers on where to get
more information. Almost certainly I won't answer all your questions,
so feel free to ask for help. Hams are famous for their
eagerness to help newcomers.

(First I have to explain something you might not have realized. In
doing so, I'm going to paraphrase something written by Steve Ford,
WB8IMY, in his introduction to a book entitled "The ARRL Operating
Manual".)

In case you didn't know, belief in magic is a necessary requirement
for all Amateur Radio operators. Of course, you won't see a question
concerning magic or metaphysics on the test you take to obtain your
license, but in your heart you will come to believe in that powerful,
intangible force.

All of us in the hobby have felt its influence at one time or
another. Some night when the band is dead as a doornail you'll be
tuning aimlessly, not expecting to hear a single signal because NOTHING
could be coming through at that hour. But then, rising out of the noise
like a ghost, there will be a faint call from another stalwart explorer
thousands of miles distant. You pounce, establish contact and both of
you marvel at the fact that the conversation is taking place at all. A
few minutes later, however, the signal vanishes as quickly as it came.
Your rational mind will shrug it off as a quirk of propagation, but
that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably
be burned at the nearest stake for even suggesting that two human
beings could communicate with each other over great distances without a
physical connection. No doubt they would accuse you of dabbling in
magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many
of us have become jaded about our powers and we tend to dismiss them as
commonplace. We hardly think twice when we use our equipment to sommon

the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous examination.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material and more information about classes, examination points (the exams are given by volunteer Hams in your community), and clubs in your area. A number of organizations will be more than willing to help. One such organization is the American Radio Relay League. Write them at:

ARRL 225 Main Street Newington, CT 06111

or call them at 1-800-32NEWHAM

Ask for their "Prospective Ham Package". It will include more detailed information, a list of classes and clubs in your area, and a list of scheduled examinations in your area also.

If you are near a Radio Shack store, go there and ask for a book entitled "Now You're Talking". This book is also available from the ARRL. It contains all the information you need, including study material and sample questions for the examinations for Novice and

Technician licenses.

Good luck, and welcome to the "magical" hobby.

Regards,

Hans, K0HB

From: JAS <jscherer@clandjop.com>
Message-ID: <32715416.A4E@clandjop.com>
Source record: 214062

I recently picked up a bunch of crystals and would like to know what they could have been used for. They are old, because the frequency is listed in kilocycles instead of kilohertz. Some of the frequencies are:

27005 kc
27085 kc
13577 kc
28815 kc
31.425 kc

Does anyone recognize any of these and are they of any use today? I have about 100 of them all around the above frequencies.

JAS

This begs the question - what might that number be? One million, two million, or however many amateurs worldwide? Surely Conn is not suggesting that Industry Canada, the FCC, DTI of UK and all the other national amateur service regulatory authorities have agreed to limit the number of amateurs who can operate on the amateur bands?

In so far as Morse code being "fair and impartial" is concerned, I will grant to Conn the arguement that Morse code testing is impartial. The sounds of "didah" represents the letter "A" and only the letter "A". But is that fair? Since the government's responsibility is to ensure that amateurs must conduct their transmissions without interferening with other users of the radio frequency spectrum, it is generally agreed that the knowledge of Morse code is irrelevant to the legitimate concerns of the government with respect to the amateur transmissions.

Returning back to the issue of limiting the number of amateurs on the bands, I had agreed with Conn that Stevenson was in error claiming that the pro-code crowd was discouraging technical progress. (As much I understand Stevenson's premises, I despair of his rhetoric, which is indeed inflamatory, if not overly flamboyant.) None the less, Conn's view that the purpose of Morse code is to limit the number of users on the amateur bands unwittingly gives creedance to Stevenson's view that the pro-code adherents discourage technical progress.

I think we will recall Coffman recounting an occurence of the late 1940's whereby the FCC was petioned to increase the Morse code speed because it was felt that by doing so, this would limit the number of radiotelephone operators. As I recall the posting, I believe that the received wisdom of that time determined that the maximum number of amateurs that could be accomodated was around 15,000. This was so ordered. Yet, the increase in Morse code speed did not limit the number of amateurs, certainly not

worldwide. Indeed, the number of users increased to such an extent that amateurs have had to resort to using techniques whereby they occupy less spectrum in order to communicate. The advent of SSB is probably the best example of the maxim that necessity is the mother of invention. Others developments, such as automatic telegrahic techniques, i.e. Clover, TOR, etc. were developments of the amateur operators due to the disatisfaction of traditional manual telegraphic techniques, Morse code.

The point being is that if, on the one hand, the purpose of Morse code is to limit the quantity of operators on HF (let us be more to the point - Morse code testing being the means to limit the number of radiotelephone operators), then it is obvious that this is an unachievable objective without the required international agreements. While on the other hand, if indeed the program to limit access was successful, it would have discouraged innovation. By limiting the number of operators on the HF, experimentation would have been passively stifled. Since everyone would have been satisfactorily accomodated, amateurs would not have undertaken to try new modes of communications. Therefore, Stevenson's contention that pro-code testing advocates wish to discourage technical innovation has a kernal of truth.

In summation, Conn's view that the purpose of Morse code is to limit the number of users on that amateur bands is demonstrably untrue and wouldn't have that effect even if the FCC (or in my case, Industry Canada) were to attempt to do so. Besides, I doubt if our respective administrations, or any other ones for that matter, give two hoots if the amateur bands are crowded or not.

>

This is true if and only if the standards are relevant to the desired objective. Since the knowledge of Morse code does not meet the limitation objective, in contradiction to Conn's views, then its efficacy as an instrument of government policy to limit the number of users on the amateur bands leaves much to be desired. Moreover, our respective administrations could care less how much effort and individual candidate

devoted into obtaining the requisite knowledge in becoming an amateur. Their interest is solely to ensure that amateurs have the requisite knowledge of operating their amateur stations. Whether it takes an individual one hour or one year to accumulate that knowledge matters little to them. The importance is that they have met that standard and have demonstrated this knowledge by passing the requisite examinations. The question here is to determine the relevance to Morse code testing is relevant in determining if the individual can operate an amateur station bearing in mind that they are potential sources of interference to other users of the radio frequency spectrum. Since Morse code testing does not limit access, nor is it relative to operator competency, to what extent does the "work ethic" justify Morse code testing? To be somewhat facetious, if working hard is a valid measure to determine one's worthiness to be an amateur, aren't there better activities that can be undertaken to determine an individual's worthiness not operate an amateur station?

>

In contradiction to Conn, Morse code has indeed been abandoned by most other users of the radio frequency spectrum, and will have been completely abandoned by 1 Feb 99, the date whereby the maritime mobile service will have abandoned completely the use of Morse code and GMDSS will be the only radiocommunication protocol available for search and rescue.

>

No, I do not agree that Stevenson proved Conn's case. The reason that aeronautical mobile does not use digital communications has less to do with advancements and more to do with technological and economic intertia. It boils down to this - pilots are like hams, they're cheap. So far they have not been forced to consider using other more advanced modes of communications because the amount of spectrum allocated to them for air to ground comms has been sufficient. In other words, they have gobs and gobs of spectrum allocation, i.e. 25 kHz channelling using 6 kHz AM radiotelephone. From an economic point of view, there is no need for them to change. (However, many commercial airlines are using digital communications in order to tranmit their needs for fuelling and victualling purposes) This is a good example of the point that without spectrum crowding, i.e. necessity, nobody would consider using more advanced techniques.

> No red herring at all. Spread Spectrum is indeed illegal on HF. The only

> Spectrum. If it should be legalized some day, why, I won't oppose the use
> of it. I welcome new technology.
>

But I think it goes without sayin that Conn would not take any steps to allow SS on HF.

> You are so silly, Carl, to think everyone goes to work on a freeway. Some
> folks are ranchers and farmers. In most cases, horseback is still a
> better method of rounding up livestock on a ranch or farm than driving a
> toyota, Carl. Horseback sometimes makes more sense as a mode of
> transportation than an automobile.

But just because indeed there are a few, a very few instances, where horse back riding is more useful than driving a vehicle does not justify a test of one's capability to ride a horse before driving on a feeway.

> > Bullshit! It's a horse in a jet helicopter world ...

> learned it, and been licensed.
>

I beg to differ with Conn on this statement because his original premise was to ensure that the existing users were not unduly inconvenienced. The result is indeed to keep newcomers out. In other words, Stevenson did not put words in Conn's mouth, Conn did it himself. As indicated beforehand, the work ethic arguement is empty also.

> > >Via the morse testing requirement, our government is fulfilling its

> the spectrum, then it doesn't have any responsibility for it at all.
>

To the contrary, the responsibility of the government regulators is to accomodate the various users of the radio frequency spectrum to the extent that interference is minimized or mitigated. With respect to the amateur service, it has been shown that attempts to limit the number of amateurs in order to minimize intra-amateur service interference would be unnsuccessful and would have other deleterious effects.

> you know more than the government, so they should let you say what the
> requirements are, what legal bandwidths and mode are allowed, etc.
>

I disagree with Conn's contention that the government has every right to make us "work" in order to obtain an amateur licence. The government has the right to ensure that I, or any other individual, must have the requisite knowledge to avoid interference, or mitigate it to the greatest extend possible, before being permitted to operate a station. Instituting artificial barriers, justified as determining the worthiness, is not

acceptable. Since the knowledge of Morse code has nothing to do with the government's legitimate interests of mitigating interference, then the imposition of such testing is unjustified, regardless if it is the tool to ensure that the individual has the "right stuff".

> Well, using your same warped illogic, the written tests discriminate
> against those who think that theory and math are "a waste of time." Morse
> testing has relevance, because it keeps the numbers of HF qualified hams
> to a reasonable number.
>

The written tests would indeed be also unjustified if they were not relevant to determining the individual's capability to operate an amateur station without being aware of the interference potential.

> They must agree with me, since they are the ones who are limiting access
> to HF through morse testing.

That may very well be the effect, but it is doubtful that limiting the number of amateurs on the band through Morse code testing is an objective of the FCC, or any other administration for that matter. More to the point, the only remaining justification for Morse code testing is that it is a supposed treaty requirement. However, the Japanese have demonstrated the tenuousness of these provisions.

No doubt. But if Reid is correct, it would seem that US amateurs have been prevented from using these newer techniques on questionable grounds. I wonder what will happen once amateurs from outside the United States start using spread spectrum on HF? Perhaps the very fabric of US society will collapse? An interesting thought none the less.

Sure, poncho. Let's put the whole thing up for grabs because the
polititians need to make some one-time-only sales to balance the
budget. You are a true free marketeer. Next we can auction of the
national parks and forests. After your local police and fire
departments "bid" on their pieces of spectrum, they can raise your
taxes to pay for it.

> If the pro CW'ers who are
>bent on code got together they could pay to have a code only spectrum.

>Like the old line says, "Money talks, Bull**** walks".

We should bid on all those VHF/UHF frequencies? Line of sight CW? Or
are you saying that the FCC should auction the international HF bands
as well. Every hear of the ITU and international treaties governing
use of those frequencies? Either way, I come up with nothing on this
one. Perhaps a little research would help before writing such inane
comments? To use your enlightened expression, Bull**** walks.

Do you have a callsign or did you just emerge from under your bridge?

I agree with Jim. The last time this topic came up a lengthy flamewar ensued, and *nothing* was accomplished. We still have a number of hams posting FS/WTB/Trade on this newsgroup.

Suppose we do endore the standard policy...where's the enforcement? No ISP is going to revoke a user's account because he simply posted something off-topic or off-charter.

If you want to place the blame, then blame whomever wanted the swap group to be called rec.radio.swap instead of rec.radio.amateur.swap.

I endorse the selective-reading idea. After all, the FS:/WTB: posts *are* usually quite clearly identified by the subject line.

Hi Joel, got to nitpick a tad.

1. 100ft of RG-58 on 440MHz with an SWR of 1:1 and *no feedline radiation*
does make a difference.

2. 100ft of RG-58 on 28MHz with an SWR of 20:1 and *no feedline radiation*
does make a difference.

Here's a simple solution for anti-coders who want HF privs without learning the code. Go get yourself an 11m rig, no license needed. You can operate there to your heart's content on either AM of SSB with complete assurance that you'll never hear any old farts pounding the brass there. Heck, if you live near a big city you are almost certain to hear all sorts of digitized noises there... At any rate, it will sound more or less exactly the same as the Ham HF bands would if every anti-coder got their wish....

<STATIC BURST>Breaker One Nine, Carl, got your ears on?<MIKE SQUEAL><STATIC BURST>

On the other hand, if you spent half as much time working on your code as you did whining about it you'd be on HF already...

Well,
Let's if I can do this reply. Yes, It's a myth! The only thing that's changing is the APPARENT XL-XC that the METER is seeing. We all know that the Electrical wavelength recurrs at a different distance than the phusical wavelength. The old velocity factor trick affects that (cheaper coax = lower VF). So, the loss is cumulative to the length, the SWR associated with the coax = myth.

If you want to play with the numbers of length, coax type, swr, ant gain, and effective power. Download TEEREV.ZIP from the ARRL BBS, or it's on the latest level of the QRZ CD-ROM.

Jim WD9AHF

P.S. I agree with the guy who said the correct length is what reaches! Just make sure that you look at what it costs. I wrote that TEEREV program to see what the tradeoff was between good coax vs an amplifier. You will be surprised at what the cost of 'cheap' coax is.

Jim
If the coax is matched (ie the load presents a resistive, 50 Ohm
impedance) then the length of the coax is unimportant, except that it
has loss depending on how good it is and the operating frequency. If
the load is not matched properly then there will be different
impedances at different points aliong the coax and you will get a
different SWR with a 50 ohm source, depending on where you feed the
coax. So your friend is correct if the load is not m,atched
accurately.

SPAM STOPPING INFO by "dd the anti-spammer"

I have seen a return mail percentage from ISPs of about
40% using the methods below. Some say they are issuing
warnings, some will tell you the spammers account has
been canceled. Resist the urge to post anything to their
thread, they never read their spam, they just mass post
looking for suckers. Attaching articles just wastes
bandwidth, and clutters up YOUR newsgroup!!

The best way to stop spammers is to contact their ISP
and ask politely if they would please stop the spammer.

Vulgar language may get YOU reported!! If the spammer
has posted a real e-mail address, I write them and cc their
ISP using this form :
postmaster@ISP.com

Some spammers will try to hide their ISP from you,
generally you can determine who they use from the
last part of the path in the header.

Also, if it is a "Quick Cash" spam, these are illegal,
refer them to:

http://www.usps.gov/websites/depart/inspect/chainlet.htm

and send a copy to :
customer@email.usps.gov

This is their fraud division.

send any copy of any 'stock offer' etc to :
enforcement@sec.gov

other folks you can notify include :
abuse@netcom.com (for mail abuse)

For AOL spammers: (It will probably be returned due
to full mailbox, you know those AOL newbies must
have Case pulling his hair out, when he's not selling
off his stock!)
abuse@aol.com

> Anyone have any experience operating
> the C5900DA and if so, what are the pros and cons of this rig???
>

I own a C5900DA and like what I see. I also have two Kenwood TM742's with 6 meter modules and feel the C5900DA
measures up very well. The receiver on the C5900DA is not quit as hot as the 742. However most people would
not detect the differance. The Standard can only monitor two frequencies at a time, unless you are in the scan
mode. The Standard has a built in triplexer. THe scan modes on the C5900DA are the most flexible I have seen.
The out of band receive is questionable. I have tried to listen to local 220 repeaters and can hear any of
them. The only 220 signal I have heard is from my TM331 setting next to the C5900DA. The PTT button on the
mic takes a little getting use to. The cross band repeat is a little strange. You can cross from 2 to 70cm
and from 6 to 70cm but not 2 to 6. Both bands use the same vco and keeps this from working.

The BIG question....would I buy another one? Yes, I think I would. By the way my TM742's are being used as
my 6 meter repeater (53.35 -1), serving St. Louis.

You should also check the end of the Path header and the NNTP-Posting-Host
header if one is present. Some ISPs will let you specify your own message ID,
but the Path and NNTP-Posting-Host headers will show the true origin of the
message.

>Sounds as good as the other ideas presented around here!!
>

Why must some of you people insist on some manual-dexterity
"requirement" that's clearly irrelevant to one's knowledge of radio and
electronics?

This is NOT a competitive sport where one's physical coordination =
machismo = "better" ... it is a technical endeavour where one's
intellectual prowess and knowledge and the bettering thereof are
supposed to be the goals.

Why must some of you insist on trying to turn it into some sort of a
physical coordination/agility/ability contest?

If you want to demonstrate physical abilities, go play sports with the
rest of the jocks ... and leave us radio geeks alone ... <grin>

>ass on CW all day long ...

That depends on what you're trying to do. In many areas, computer equipment
is not available; in fact, some areas don't even have power systems that are
stable enough to operate computers reliably. And when I'm driving in my car
I'm lots safer behind the wheel with one hand on a set of paddles or a J-37
than I would be trying to type on a keyboard and look at a computer screen.

Different modes for different applications. Besides, if you're into DX at
all, you know that you "go where the DX is." That means if he's on AMTOR,
you work AMTOR. If he's CW, you call him in CW. Etc.

>You could also talk the cockpit voice, which is no analog AM

Actually it is.

I just purchased a working Cushman CE5 Monitor. The deviation scope and 450 plug works well but 25 meg and 150 meg plugins are not doing well. Also the A17 PPL board is hosed. I need some help in resurrectiong this vintage piece of FM test gear.

If anyone can point me toward any commercial outfits that might still support this monitor or better might have parts, manuals, and/or plugins, I'd be most greatful.

Followup directed to: rec.radio.amateur.equipment but email CC would be appreciated.

Hi & TNX for reading this message.
I just want to inform you that the 5.1 version of DXHUNTER is
available on the Internet.
The URL is:
http://www.funet.fi/pub/ham/hf-work/
file name: dxh51eng.zip, size 1.1 M

This new version allows you to automatically connect to
world wide dxclusters via radio and TCP/IP gateways.
If the connection drops it's rebuilt automatically!
My connection to NO4J passes through 10 nodes and
works perfectly.
Autologin, autopassword autotelnet features are implemented.
Just read the file TCP&TIPS.TXT in \DOC for details.
An antitimeout feature allows you to stay connected even
if idle, for hours.
For further details find me at my home radio BBS:

IK4VYX@I4UJB.IEMR.ITA.EU
E-mail vmi@vmi.it

My name is Fabrizio.

I'm often connected at NO4J cluster, if you wanna chat with me.

Central time.
It's located at:

http://www.arrl.org/arrlletter/961025/#vanity

Sam
AD5C

****

GATE 2 VANITY CALL SIGN GRANTS: ANY DAY NOW!

The FCC is holding to its schedule that first-day vanity call sign Gate
2 applications could be processed as early as today. As
of October 11, the FCC had received more than 6400 applications in
response to Gate 2, which opened just over a month
ago. Personnel in the FCC's Gettysburg, Pennsylvania, office have been
entering application information and lists of requested
call signs since then. Slightly more than 4500 applications were filed
on opening day, and the FCC has said it will consider all
day-one applications as a group and grant licenses in random order.

If the FCC is unable to grant a requested call sign, it will dismiss the
application and notify the applicant by mail. Applicants
may reapply, but hams whose applications are dismissed must request a
refund of the $30 processing fee in writing and
under separate cover.

Hi John,
Yep, your right. This weekend is the grandaddy of dx contests.
The CQ Magazine World Wide DX Contest (SSB portion) is from 0000z Sat (8pm edt) to 2400 Sunday (7pm EST). The rules are a bit much to try and explain here. Check out http://www.affcom.com/cqcontest/ for info.

The ham population cannot just continue to get older. A population which is ageing at basically the same rate as the passage of time will eventually die out, because we all die. So will amateur radio unless the average age of the amateurs stabilises.

As to whether age brings intelligence, that seems questionable after reading some of the things that get posted ;-)

This coming Tuesday, October 29th, The California Drum Shop in Bethlehem, Pa., will hold a Drum Clinic featuring the Hip Pickles. Show time is 7pm and there will be plenty of door prizes and a finale featuing a Hip Pickle patented 'community jam'. Hip Pickles are a percussion trio that are 6x DCA drum ensemble Champions and perform in many different styles including Corps, funk, afro-cuban, Samba etc... and sometimes with pre-recorded sequences. Featuring Chet Doboe, Chris Scherer and Zeusman, the Hip Pickles will be performing material from their new cd,"Out of the Jar", and demonstrating and discussing concepts to improve chops, timing, how to get the most out of practice time and musicianship.

For more information Call California Drum Shop at 610 866-5418. If your in the area come on out and say hi!

I bought a Kenwood TH-79A(D) about a year ago, had it modified, and during the modification, the 'tech' (I won't flame him in public, but if anyone in the bay area wants to know who NOT to go to, reply via e-mail. His attitude after Kenwood stated the radio was fried due to the 'tech' doin the mod broke two traces was "You have me do a mod, you roll the dice. you gamble.:) Any way, Kenwood sent the radio back saying "Needs new control board." I called them back and asked how much it would cost. $175 for the board + $100 an hour labor, maybe 2-3 hours." So, $375-$475 for a $390 radio?? "Umm.. (pause) Yes.' So I asked about getting JUST the board. No. We have to do it. So I called the other service center, and they gave me a # for a parts center in California who could get the part, but needed a part #. So I called back the svc center, and asked for the part #. "We'd need to research it, and that would take time.. Check with the parts center." We went in circles for a few minutes, her saying we don't have time to research it, yata yata. And finally she put her manager on. Nice guy, he promptly gave me the part #. I then told him how my REAL tech (a friend of myne) thinks the part needs to be 'machined' in, not easily put in by hand. He said "No, it can be put in by hand, but if your friend's never done it before, it might be risky. I see here your radio is brand new.. Don't risk it, send it in, and we'll install it no charge, just for the cost of the board."

Now THAT is SERVICE. Long live Kenwood!

Good point, Gary. I hadn't thought of that, but it makes a lot of
sense. Most of the systems I deal with have a resonant cavity load fed
with rigid coax where there is no chance of any rf currents on the
outside. (A good thing too, at 250 kW peak and 425 MHz.)

5812. Los Angeles - Active\Popular Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-25 00:00:00 UTC
From: qwerty@earthlink.net
Message-ID: <3270A187.7C2D@earthlink.net>
Source record: 214138

Does anyone have a list of the more active repeaters in the Los Angeles basin? Although I have a book listing all of repeaters for this area, I am interested in knowing which of them are the most heavily used. When I have the time to do my own scanning, its usually late at night or very early in the morning; when otherwise active machines are dead. I'm not a ham (yet) and really don't know what the popular systems are without scanning, and with my time restrictions, its sort of hard to find the goodies. ;)

Thanks,
-Brian

VE Lindenhurst,LI Oct 27,1996

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Please note the change for this month.

The location will be at:

The GSBARC HAMFEST
Knights of Columbus Hall
400 South Broadway
Lindenhurst, NY

Directions:

Southern State Parkway -Exit 35 (WELLWOOD AVE.) SOUTH, crossover
NY 27 (SUNRISE HWY). Continue SOUTH to south side of RAILROAD,
make RIGHT onto HOFFMAN AVE. Continue WEST 3 blocks to SOUTH
BROADWAY, turn LEFT. Go past traffic light 2 BLOCKS.
Knights of Columbus Hall is the LEFT SIDE of street.

Sunrise Highway (NY 27) -to WELLWOOD AVE. Go SOUTH, follow directions
as above.

Montauk Hwy (Merrick Rd.) - Direct to SOUTH BROADWAY, 3 blocks WEST
of WELLWOOD AVE.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1996 Exam fee is $6.05, please bring exact change.
* Novice exams (elements 1A & 2) are free.

For addition information you may contact:

Tom Carrubba KA2DFO (516) 422-9684 or 422-9594

FYI The channel bank takes 24 voice circuits and converts them to
digital and multiplexs them on to a 1.544 digital line. Much of
the hardware is the conversion of analog to digital.

Also the equipment will run on -48 volts.

I would think that it would be easier to build a multiplexer
for digital data from scratch.

Just received: Solar report from Tad Cook, KT7H:

GEOMAGNETIC ACTIVITY UP

Solar observer Tad Cook, KT7H, in Seattle, Washington, reports that solar activity remained low last week, but there was more geomagnetic activity. Conditions have been disturbed over the past few days, and the average A Index was about double this week compared to the week previous.

Disturbed conditions are expected to fade through the weekend (CQ World Wide DX SSB Contest begins at 0000 UTC on October 26), and then become upset again around November 9 and again around November 15. Solar flux is expected to stay about the same.

Sunspot numbers for October 17 through 23 were 0, 0, 0, 0, 11, 0 and 0, respectively, with a mean of 1.6. The 10.7-cm flux was 68.5, 69.6, 71, 71.3, 69.7, 69.8 and 67.8, respectively, with a mean of 69.7. The planetary A indices for the same period were 6, 21, 31, 15, 7, 28, and 35, respectively, with a mean of 20.4.

The ARRL Letter
Electronic Update
October 25, 1996

---

* Editorial: Rick Lindquist, KX4V (rlindquist@arrl.org)
* Circulation/Address changes: Kathy Capodicasa, N1GZO
(kcapodicasa@arrl.org)

IN THIS UPDATE:

* Gate 2 Vanity Call Sign Grants: Any Day Now!
* FCC Stops Renewal Reminders
* ARRL Board in Session
* ARRL Letter Circulation
* Marconi Museum to Open in New Hampshire
* Boys & Girls Clubs to Embrace Ham Radio
* John "Bob" Vota, WB1FDY, SK
* In Brief: More astronaut hams; KE6HCI honored;
New FCC Web searcher; More Alexanderson info;
Welcome aboard!; No cat

GATE 2 VANITY CALL SIGN GRANTS: ANY DAY NOW!

The FCC is holding to its schedule that first-day vanity call sign Gate 2 applications could be processed as early as today. As of October 11, the FCC had received more than 6400 applications in response to Gate 2, which opened just over a month ago. Personnel in the FCC's Gettysburg, Pennsylvania, office have been entering application information and lists of requested call signs since then. Slightly more than 4500 applications were filed on opening day, and the FCC has said it will consider all day-one applications as a group and grant licenses in random order.

If the FCC is unable to grant a requested call sign, it will dismiss the application and notify the applicant by mail. Applicants may reapply, but hams whose applications are dismissed must request a refund of the $30 processing fee in writing and under separate cover.

FCC STOPS RENEWAL REMINDERS

As of October 22, the FCC has ceased issuing Form 610R license expiration notices--reminders to hams that their tickets are going to expire within the next 90 days and that they must request renewal. The last notices sent by

FCC covered into February 1997, although the specific date was not available. A Form 610R for renewal must be returned by mail only to the FCC. An FCC Public Notice is expected within a few days.

The demise of the Form 610R means that hams--whose licenses are issued for ten-year periods--must take the initiative to remember the renewal date of their tickets and file a Form 610. An FCC spokesman in Gettysburg says the Commission hopes to have a Form 610 available soon on the World Wide Web to permit on-line renewals.

ARRL BOARD IN SESSION

The ARRL Board of Directors is meeting in Windsor Locks, Connecticut, through tomorrow (October 26). The board will consider issues dealing with the budget for 1997.

The board also will hear reports and recommendations from the three standing committees--membership services, volunteer resources and administration and finance.

THE ARRL LETTER ELECTRONIC CIRCULATION

A reminder to subscribers who get The ARRL Letter electronically directly from HQ: If your e-mail address changes or if you wish to be removed from the distribution list, please send an e-mail message request to Kathy Capodicasa, N1GZO, at ARRL HQ. Include your name, call sign and e-mail address (old and new if changing address) in the body of the message.

Some subscribers get The ARRL Letter electronically via Netcom Internet services (sponsored by Mike Ardai, N1IST, and the Boston Amateur Radio Club). The Netcom automated listserver (listserv@netcom.com) redistributes the Letter (and several other ARRL lists) with the League's permission, but it is neither managed nor administered by HQ, and we do not handle subscribe or unsubscribe requests or complaints regarding this circulation route. To sign up or inquire about the Netcom lists, send e-mail to listserv@netcom.com. In the body of the message, type "subscribe letter-list" to add your name to the mailing list, or type "unsubscribe letter-list" to have it removed. Contact Mike Ardai at n1ist@netcom.com for more information.

MARCONI MUSEUM TO OPEN IN NEW HAMPSHIRE

Bedford, New Hampshire, will be the site of the US National Marconi Museum, to be run by The Guglielmo Marconi Foundation USA. Ray Minichiello, AA1KG--the founding chairman of the organization and a retired professional engineer--says the group hopes to open the museum early next year in Bedford's former police station. One of the exhibits the museum hopes to have is an exact replica of the wireless room aboard the RMS Titanic, which sank after striking an iceberg on its maiden voyage in 1912. Minichiello hopes one day to have the actual Marconi transmitter used by the Titanic's radio operator, Jack Phillips--if it's ever recovered from the bottom of the North Atlantic. The shipboard radio led directly to the rescue of 700 passengers, and Minichiello said having the actual Marconi radio would serve

as a real tribute to the man who's credited with developing the first practical wireless system.

Other Marconi museums are in Bologna and Genoa, Italy. Sites in Canada and on Cape Cod, Massachusetts, also take note of Marconi's legacy. For more information, call 603-472-9746 or write the museum at 18 North Amherst Rd, Bedford, NH 03110.

BOYS & GIRLS CLUBS TO EMBRACE HAM RADIO

Boys & Girls Clubs soon hope to offer an Amateur Radio program to members across the country. That word from Rick Zamoida, N1QZA, who's the teen/outreach director of the Manchester, New Hampshire, Boys & Girls Club and advisor to the only currently active ham radio club within the organization--the Manchester Boys & Girls Airwaves Amateur Radio Club.

Under the current plan--and in cooperation with the ARRL--an effort is under way within the organization to target ham radio clubs, instructors and volunteers in each of the 15 ARRL divisions. Zamoida reports that the Boys & Girls Club in Santa Monica, California, already is developing a pilot program "to get the ball rolling." Zamoida's own Airwaves club also is playing a big role in developing a national ham radio program for Boys & Girls Clubs.

Others helping to organize the program include Richard Sommers, W6NSV, of the Radio Club of America, and Carole Perry, WB2MGP, of Media Mentors Inc and a well-known advocate of using ham radio in the classroom.

Zamoida says ham radio is a great activity for Boys & Girls Clubs because it provides an outlet for social recreation and opportunities to develop leadership and cultural awareness. "It's a great hobby that's often overlooked," he said. For more information, call Zamoida at 603-625-5982.

JOHN "BOB" VOTA, WB1FDY, SK

John R. "Bob" Vota, WB1FDY, of Centerdale, Rhode Island, has died following a long battle with cancer. He was 58. Bob served as Rhode Island's section manager from 1985 until 1987, was a past president of the Providence Radio Association and a founder of the North Providence Radio Club. He also was an active CW op and contester and was a member of the Army Military Affiliate Radio System (MARS) program, serving as its Rhode Island director for many years. His wife, Elaine, KA1PID, and two sons, Bob, KA1QYF, and Bill, KA1QYE, are among the survivors.--Rick Fairweather, K1KYI

In Brief:

* More astronaut hams: Four more NASA astronauts are now licensed Amateur Radio operators! Mission specialists Ed Lu, KC5WKJ; Jean Francois-Clervoy, KC5WKG; and Carlos Noreiga will be on STS-84 in May 1997, and Marsha Ivins, KC5WKF, will be on STS-81 in January 1997. These are Mir docking missions (but not SAREX missions), where we hope to get permission to allow astronauts to use Mir's radios.--Rosalie White, WA1STO

* KE6HCI honored: Randy Foutch, KE6HCI, Fremont, California, has been named the 1996 Field Organization Volunteer of the Year for the Pacific Division by Director Brad Wyatt, K6WR. The award was made October 19 during the Pacific Division Convention--Pacificon '96--in Concord, California. Randy is a DEC and an assistant director.

* New FCC Web searcher: The FCC has installed a new search engine for use on its World Wide Web site at http://www.fcc.gov. It supports both concept and keyword searches to help Web users find FCC documents quickly and easily. The search utility also supports Boolean operators (and, not, or, etc.). Details on how to use the new search tool are located on the search page, http://www.fcc.gov/search.--FCC

* More Alexanderson info: John Gray, W6UZ, of Charlottesville, Virginia, offers some additional information about the Alexanderson alternator (see The ARRL Letter Electronic Update, October 18, 1996). In addition to the one on Sweden's west coast, he reports that several others were in operation in the early days of wireless, including two at the RCA (formerly Marconi) site at Bolinas, California. One operated as NPG on about 24 kHz during World War II under contract to the Navy; the other was sold to the Navy and shipped to Guam for installation after the liberation of that island. It remained in the crates and was never installed. The other one was dismantled in the early 50s by a salvage company for the copper it contained.--John Gray, W6UZ

* Welcome aboard! Martin Cook, N1FOC/G0TPO, is the new ARRL Outgoing QSL Service manager, assuming the reins from Joe Carcia, NJ1Q, who now manages W1AW. A native of Cheltenham, England, Martin has been licensed for 12 years. He's active in packet radio and HF. He and his wife Kate, N1ODI, live in Bristol, Connecticut. Kate works in the Publication Sales Department at HQ.

* No cat: When asked to describe radio, Albert Einstein is said to have provided an eloquent description: "You see, wire telegraph is a kind of a very, very long cat. You pull his tail in New York and his head meows in Los Angeles. Do you understand this?" Einstein then continued: "Radio operates exactly the same way---you send signals here, they receive them there. The only difference is that there is no cat."

talking about!
The ONLY time coax length makes a difference is when it is radiating
rf,thus it becomes an active part of the antenna,instead of the passive
conduit it is designed to be.

5822. Heathkit Parts?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-25 00:00:00 UTC
From: jdw@apian.hr.lucent.com
Message-ID: <54qldb$dt9@nntpb.cb.lucent.com>
Source record: 214148

I recently purchased two 60 drawer parts cabinets at a hamfest.
The cabinets are full of electronic parts, most of which I can
identify. A few drawers were marked "Heath Parts" and have some
discrete and dip parts with designations like "417 283". So
can anyone tell me:

- are they Heathkit parts (i.e. "417 XXX labeled parts)
- is a cross reference available (with Industry standard equilvalents)
- is anyone interested in buying these for modest $(I can take an inventory)

5824. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-25 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <54qpq4$csp@lyra.csx.cam.ac.uk>
Source record: 214150
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info,aus.radio.amateur.misc

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

Following discussions last year the full collection is not
now posted to alt.usage.english (but see below for how to
obtain a copy by FTP).

Brian Kelk bck1@cl.cam.ac.uk
25 October 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle

Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

I found this mod!!!!

...
Date: 2 Jun 89 16:07:14 GMT
From: pasteur!navajo.berkeley.edu!bilbo@ucbvax.Berkeley.EDU (Bill
Baringer)
Subject: FT-209RH mods resolved

Some time ago I had tried the FT-209 mods as published in the Dec. '87
73 magazine. It hadn't worked correctly, and someone on the net
verified
that the jumpers listed weren't correct, but they'd forgotten the
correct
jumpers. Well I finally got around to doing the mod, and here are the
results.

The magazine article says to jump pins 1, 7, 9, 10, 11, 13, and 16.
In every 209RH I've opened, pins 1, 9, and 13 are already jumped.
Adding jumpers 7, 10, 11 and 16 allows "out-of-band" transmission.
But the receiver becomes thoroughly confused, and is not tunable.
The solution: DON'T jump 11 and 16.

So the final steps are:
1) Add jumpers to 7 and 10.
2) Give the VCO can a 1/2 turn clockwise if you're moving to higher
freqs.
3) Reset radio and reprogram rcv and xmit freqs, and rptr offset.

Hope this helps!

Bill -KI6DG

All the usual disclaimers apply.

> >
> > Dick Hughes - W6CCD

Sometimes we spend way too much time performing analysis on a problem rather than using common sense. I've been a licensed amateur radio operator for over 30 years and have worked in commercial broadcasting and two-way radio for almost as long. The correct length of coax cable IS "the distance it takes to get from the transmitter to the antenna."

While others will argue the technical merits or matching this an that, in the "real-world" it makes very little difference.

Oh well, sit back and wait for all the techno-wizards to dispute this discussion but I know what works and it works in 99% of the cases involved.....

The part above is correct ...

>People will have the total ham radio experience
>>without the licensing as they teleconference freely thru our ether.
>>What hams do now as a "licensed privilege" will be everyone's
>>experience -

I believe that ham radio will always be, and should always be, a
licensed privilege ...

>only faster, better, stereo, color, digital, warp
>>speed, real-time, multi-tasking, AI smart, way kewl, near free,
>>fun communications with anyone they want to about anything they
>>want to. The world has shrunk to the size of your computer screen

The above part is also true ...

>>We can dance along the path and make billions of dollars providing
>>it or we can clutch our straight keys and resist change.

I don't see how we're going to make billions of dollars ... I'd be happy
to see ham radio survive, rather than losing its bands and dying in a
few years ...

>Its
>>ultimately a personal choice - but certainly in the domain of how
>>we react to the inevitable, not whether the inevitable happens or
>>not.

Again, the above is correct ...

>>As a rule of thumb, don't settle for less. Get a 64 bit 200 MHz CPU and
>>start designing things that move and use data as fast as you can.

While a 64 bit 200 MHz CPU would be nice, the software hasn't caught up
with that hardware platform yet ... but a nice fast Pentium works pretty
well ...

Carl - wa6vse
carl@ais.net

(Jim quotes start here:)
>John, all the above could very well happen, on the internet. But will ham radio
>become the internet ?

Ham radio is *already* part of the the internet and the internet is
part of ham radio ...

>I am missing something in the discussion of all the hi-teck stuff here
>somewhere.

That's par for the course ... nothing surprising about that ...

>If I want to talk to my Mom across the world on
>the Webphone, what's that got to do with ham radio ?

In the future, your link (or at least a secondary, back link) to the
internet could conceivably be a wireless one via your local amrp.org
domain LAN ...

>It seems
>to me the internet is for the computer hobbyist, and that ham radio is for the
>RF hobbyist.

There is an undeniable, irresistable merger between the worlds of
communications (including radio communications) and computers as more
and more things are done more rapicly, efficiently, and cost-effectively
through the digital processing of signals ...

That's exactly why I proposed the "burst-multiplexed TDMA
digitalemulated CW system" a month or two ago ... to try to get you
stuck_in_the_1930s types to open your teeny little minds just a crack
and see if you could even imagine a different, yet better way of doing
what you like to do ... in a way that would be modern, more efficient,
and more compatible with the trends in technology and future spectrum
economics, but would still "feel like" the same old anacronistic CW that
you insist on loving .... I even proposed providing simulated channel
impariments and interferors ... so you could feel challenged, if you
wished, despite the superior reliability and robustness of the
underlying digital communications system ...

Did you even stop and think and say "well maybe that would be OK ... if
it really *did* "look and feel" just like my old friend CW ...

NO ... every damned pro-code brass-pounder who responded said "Hell no
... don't want nothing to do with that newfangled stuff ..."

SO, you see ... you're stuck in the past, you like it there, you refuse
to even consider modern alternatives ... even when they're constructed
specifically to accomodate your tastes ... you're rigid, inflexible, and
unchanging ...

SO all we can do to assure the future of ham radio is to step around
you, pass you by, and proceed into the future without you ... bye ...

>Maybe I am confused.

NO doubt about it ... about many things ... including what ham radio is *supposed to be* all about ...

It is NOT imparital ... it VERY STRONGLY favors those who have a natural
ability ... people with musical talents, sense of tone, rythm, etc. ...
this has been pointed out repeatedly and is repeately ignored by Conn
and the pro-coders ... (the "haves" who could care less about the
"have-nots")

>But is
>that fair? Since the government's responsibility is to ensure that amateurs

>I had agreed with Conn that Stevenson was in error claiming that the pro-code
>crowd was discouraging technical progress. (As much I understand Stevenson's
>premises, I despair of his rhetoric, which is indeed inflamatory, if not
>overly flamboyant.)

Forgive me if it offends you in some way, but my passion for this
subject runs deep and sometimes I feel that some imflaming is called for
.. we need to get more people "worked up" and off their backsides
working for the future of ham radio ... it that takes inflaming, so be
it ... seems to me that many of history's leaders were simply people
with a conviction who were able to motivate others to action to
accomplish change ... now I'm not claiming to be some sort of "great
leader", don't get me wrong ... but I hope that in some small way I can
be responsible for promoting and facilitating the necessary changes.

>None the less, Conn's view that the purpose of Morse

>The point being is that if, on the one hand, the purpose of Morse code is to
>limit the quantity of operators on HF (let us be more to the point - Morse
>code testing being the means to limit the number of radiotelephone
>operators), then it is obvious that this is an unachievable objective without
>the required international agreements. While on the other hand, if indeed
>the program to limit access was successful, it would have discouraged
>innovation. By limiting the number of operators on the HF,
>experimentation would have been passively stifled. Since everyone would
>have been satisfactorily accomodated, amateurs would not have undertaken to
>try new modes of communications. Therefore, Stevenson's contention that
>pro-code testing advocates wish to discourage technical innovation has a
>kernal of truth.

Point 1)
By requiring proficiency in their favorite mode, the pro-coders not only
limit the number of *phone* operators, but also limit the number of
operators of all other modes except CW ... this, as you acknowledge,
discourages technical innovation (by artificially surpressing the number
of participants in other activities and technologies ...)

Point 2)
The entire *goal* of "limiting the number of HF operators" is an abomination ... it automatically excludes anyone who rejects the premise that "CW is 'best'" and it seeks to set aside a public resource as the exclusive playground of the practitioners of a dying method of communications ... this is totally contrary to the purpose and goals outlined in Part 97.1 ...

Point 3)
The incumbents resist change, progress, and modernization because they cannot, or refuse to, understand and accept the benefits of modern technology and, furthermore, because such acceptance would, of necessity, acknowledge that their preferred methods have, indeed become antiquated and inadequate. This would "devalue" their own self-worth, and this they cannot accept ... this is, of course, circular in that it feeds on itself and is self-perpetuating ... there is probably no way to break the cycle and few who are trapped in it are likely to ever "see the light" ... this is unfortunate, but as technology and society progress, there are always those who refuse to accept the changes and keep pace ... they are simply left behind as "selection of the fittest" marches on ...

>In summation, Conn's view that the purpose of Morse code is to limit the
>number of users on that amateur bands is demonstrably untrue and wouldn't
>have that effect even if the FCC (or in my case, Industry Canada) were to
>attempt to do so. Besides, I doubt if our respective administrations, or
>any other ones for that matter, give two hoots if the amateur bands are
>crowded or not.

I wouls submit that they care, and in the face of increasing demands for spectrum for other uses will increasingly care, about how UNCROWDED our bands are ... whine as some might, our bands are SIGNIFICANTLY more sparcely occupied than the commercial bands ... this is BAD ...

>> > It also panders to another view that seems to be widely accepted amongst
>> > Luddites ... that "honest work is necessary to prove one's 'worth'" ...
>> > this, of course is YOUR work ethic, and it's bogus, too ...
>>
>> That's a big problem in society today, I believe, there are too many who
>> believe just like you, Carl, that an honest work ethic is something to be
>> sneered at, just as you sneer at and lie about those who want to maintain
>> standards. One may reasonably infer, based on the above sentence, that
>> since you dont believe that honest work proves one's worth, you believe
>> that either "dishonest work" or "no work" will prove one's worth. Which
>> is it? Too many today are just like you, want something for nothing,
>> "'cause I *deserve* what others have worked hard to earn, so lower the
>> standards to meet me, so I won't have to measure up to the standards."

NOTE: When I say "I/we" in the following, please include the thousands of others who are technically more qualified than the vast majority of hams by virtue of years and years of directly relevant professional experience ... no boast, just fact ...

Point 1)
WRONG ... I/we don't "want something for nothing" ... I/we have worked hard for 25 years at becoming experts in RF, electronics, and computers .. I/we have "paid our dues" in that respect ... we resent the hell out of being told that we "aren't qualified to be considered 'real' hams" by a bunch of backward, technically ignorant pro-code people, who for the most part, are not as qualified as we are ...

Point 2)
I/we don't "sneer at" honest work ... I/we respect the effort that goes into learning the theory ... been there, done that ... the point is, since I/we've ALREADY done that, you feel that some EXTRA work must be artificially introduced to present a barrier that we must overcome to demonstrate our "dedication," "desire," "commitment," etc. ... this is ridiculous ... I've spent 25 years demonstrating my dedication, desire, committment, etc. to the advancement of technology ... I don't have to PROVE anything to the pro-coders ...

Point 3)
Admitting (welcoming) technical professionals in large numbers in no way constitutes "lowering the standards" ... in fact, they will raise the standards ... even with zero knowledge of the code ...

It is pretty clear to me that this is EXACTLY what the pro-coders fear .. that an influx of technical professionals will show the world and force the pro-coders to face the fact that the majority of today's hams are technically backward and stuck in the past ...

>This is true if and only if the standards are relevant to the desired
>objective. Since the knowledge of Morse code does not meet the limitation
>objective, in contradiction to Conn's views, then its efficacy as an
>instrument of government policy to limit the number of users on the
>amateur bands leaves much to be desired.

Government should not HAVE a "policy to limit the number of users on the amateur bands" .... that is contrary to the objectives of the amateur service ...

>Moreover, our respective
>administrations could care less how much effort and individual candidate
>devoted into obtaining the requisite knowledge in becoming an amateur. Their
>interest is solely to ensure that amateurs have the requisite knowledge of
>operating their amateur stations. Whether it takes an individual one hour or
>one year to accumulate that knowledge matters little to them. The
>importance is that they have met that standard and have demonstrated this

This is what I mean when I blast "forcing *your* work ethic on me" ... it is reacting to the people who say, in effect "You're a professional in this area, so passing the theory is no problem for you, therefore, we must have some other barrier to force you to expend work to show that you "qualify" for a license."

>knowledge by passing the requisite examinations.
>The question here is to

>determine the relevance to Morse code testing is relevant in determining if
>the individual can operate an amateur station bearing in mind that they are
>potential sources of interference to other users of the radio frequency
>spectrum. Since Morse code testing does not limit access, nor is it relative
>to operator competency, to what extent does the "work ethic" justify Morse
>code testing? To be somewhat facetious, if working hard is a valid measure

>> Well, bless my soul, you made my case for me. So you admit there are
>> circumstances when your vaunted digital modes are not better than older
>> modes, like voice. My point is that in like manner there are times when
>> CW is a more effective means of communications for a ham than digital
>> modes or even voice. Thanks for your help in making that point.
>>

I did NOT make Conn's point for him ... on the contrary, I said that
voice is preferred over CW or digital methods in some situations
because voice is a NATURAL form of communication ... CW and didgital
are both artificial methods (the "user interface" is not build-in like
the mouth and ears) ... so voice vs. CW/digital is apples/oranges in
this case.

Now to compare CW to digital, that's apples/apples and digital will kick
ass on CW all day long ...

You could also talk the cockpit voice, which is no analog AM, and
convert it to digital voice and apply an appropriate protocol and pack a
lot more aircraft users in the same spectrum with less interference and
problems than the current AM system ... the problem is the installed
base will take time to convert and a phased conversion scheme is
necessary to assure the continuity of vital services ... ham radio does
not pose the same constraints ...

I'm afraid that Jim's post was nearly as absurd as yours are ...

There IS NO *reasonable* national security concern to prohibit spread
spectrum on HF when it is freely allowable in VHF/UHF consumer products.
It would be just as easy, probably far easier, to hide covert messages
in the middle of the 902-928 band, where spread spectrum signals are the
norm, and copy and relay them via satellite to "the evil empire" ...

Here is a summary of news items covered on edition #187 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 1-Nov:
-
1. FCC Discontinues Form 610R, W5YI VEC Re-initiates Paid Renewals
2. Grove Enterprises Expo in Atlanta Successful, WA4SIR at Banquet
3. ARRL Holds Last Board Meeting of 1996, Considers '97 Budget
4. Gate 2 Vanity Call Signs May Go Out This Week on Random Basis
5. New Marconi Museum in New Hampshire to Open, Seeks Titanic Gear
6. Special Event Station Calendar
7. AMSAT-LU Readies for VOXSAT Launch, Successor to DOVE
8. Four Astronauts Get Licenses, Scheduled for Mir Missions in '97
9. AMSAT-NA Reports OSCAR 11 Working Well, Temperature Stable
10. New Version of STSORBIT PLUS Released by Author
11. Motorola M-Star LEOs to Use Lasers, No RF Spectrum Threat Posed
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. Weekly Propagation Forecast
14. Clinton Campaigns for "Internet II", Free Hook-up for Schools
15. Netscape Joins with 37 Manufacturers for New Internet Standard
16. John R. "Bob" Vota, WB1FDY, Former RI Section Manager, SK
17. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace,
North Dakota, where "This Week in Amateur Radio" is heard on the
WA0ZOK repeater, serving Fargo, North Dakota; Morehead, Minnesota;
and the Red River Valley on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
```

kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>Ham Radio has become? If so, it's future doesn't look too bright.

Hi Brian, where in the world did you get the idea that netnews
is ham radio? It is something else entirely. The hams here
on netnews have the choice of reading/writing netnews or
being on the radio. Each medium holds its own special
attraction.

>Now getting back to the code issue. Perhaps if a certain small band of
>freqs could be set aside, many more like myself could practice code in
>a real world environment at a low power and we also could become Hams

This has been done. It's called the novice license. Assuming you are
serious about wanting to learn Morse code, the 5wpm novice
requirement is slow enough that a motivated person can learn
to copy in a few hours. Try copying QSOs on the novice CW bands
for awhile and then take the test. Bet you pass.

ARRL currently has a program under development which analyzes transmission line. I'm fortunate to have been asked to play with an early copy. Running some quick examples shows the following:

At 28 MHz an antenna with a purely resistive load of 50 ohms fed with 100 feet of RG213 has a loss of 1.181 dB. There is no additional loss due to SWR.

The same antenna fed with 100 feed of 1/2 inch 75 ohm hard line has a loss of .420 dB due to the cable and an additional .032 dB due to the SWR for a total loss of .452 dB.

An antenna with a purely resistive load of 500 ohms (10/1 SWR) fed with RG213 has a loss of 1.181 due to the cable and an additional 2.702 dB due to the SWR for a total loss of 3.883 dB.

The same antenna fed with 1/2 inch 75 ohm hard line has a loss of .420 DB due to the cable and an additional .032 dB due to SWR for a total loss of 452 dB.

Incidentally, I chose purely resistive loads just to simplify things. The program works with complex loads as well. If anyone would like a specific calculation you can eMail me. All that is needed is the type cable, the length of the cable, the frequency and the load, (resistive and inductive).

Regards, Merv

Hi Brian,

Why not call the ARRL and find out the name of a local club in your
area. I'm sure there will be dozens of amateurs there willing to sit
down with you and a couple of practice oscillators sending code back
and forth. While not as good as "being on the air" it will still
give you the capability of practicing.

In the meantime, why not study for your codeless tech license. 50
question multiple-choice test. Once you get your tech license,
you can operate on every amateur band above 30mhz (99% of all
available amateur spectrum is above 30mhz) with full power. You
can even operate CW on some of those bands, to practice your code
speed even more! One doesn't have to have a coded license to use
code on the air!

>it does.
>
>Roy Lewallen, W7EL

I agree with your comment on common mode currents. Also, with your
comment about the directional coupler. What it really amounts to is
that if the coupler has poor directivity (equivalent to not being
balanced for the impedance of the cable being used), some of the
forward wave is coupled into the reflected port. The resultant
apparent reflected signal depends on the relative phases of the
forward and reflected power and thus on the position of the coupler in
the standing wave. This phenomenon can also make the VSWR look better
than it really is if the two waves tend to cancel.

This discussion is a good example of the Internet at work. It's nice
to see that the ham radio newsgroup generally seems to be populated by
considerate people and not the nutcakes that wase bandwidth on a
couple of other newsgroups I follow.

You know, I've wondered about the same thing. It seems that the codeless techs should have some CW spectrum, maybe share the nov/tech subbands. It would be a perfect place to make contacts and practice CW at the same time. I've worked with a lot of newcomers on 2 meters CW, and it just isn't the same as real HF contacts. It would be a lot more fun if they could switch their rig on any time of day or night and call CQ, knowing that someone is out there...somewhere. Those of us who work CW know that on-the-air contacts are the best practice there is, and much better than listening to a tape.

>the load is not matched properly then there will be different
>impedances at different points aliong the coax and you will get a
>different SWR with a 50 ohm source, depending on where you feed the
>coax. So your friend is correct if the load is not m,atched
>accurately.

No, the SWR is constant, and is a function of the mismatch at the load end only. That constant SWR is what causes the presented impedance variation along the line (due to transmission line transformer action). If you insert the SWR meter anywhere along the line, it will read the same SWR (discounting line loss). A SWR meter reads SWR, not impedance.

Internally, a SWR meter is a 50 ohm line section, so it merely acts as a short extension to the cable being measured. (If you try to measure 75 ohm line with a 50 ohm SWR meter, however, you'll be in for some surprises.)

Conversely, if you have an operating impedance bridge, you can measure the impedance at any point along the line, and given that, the cable length from the load to that point, and a Smith Chart, you can determine the SWR on the line (discounting line loss).

Now if the line has loss, and all real lines do, then you have to add a fourth variable, and the system becomes more complex. Instead of a constant SWR circle on the Smith Chart, now you have to follow a SWR spiral which approaches 1:1 as cable length tends toward infinity. The approach is asymptotic, and if cable loss is high, will quickly approach 1:1, but never quite reaches 1:1. If loss is low, the approach will be very gradual, and for moderate line lengths can be assumed to be a constant SWR circle.

(Incidently, this is a convienent way to measure line loss, just place a short or open at the load end of the cable and read the SWR at the source end, the closer to 1:1 it is, the higher the cable loss. There's a formula in the Handbook which will give you the exact loss in db for a given SWR and line length.)

For moderate lengths of good cable at HF (good cable, not RG-58), cable loss can be discounted and the SWR circle can be assumed nearly constant. At VHF+ however, even with good cables loss may become significant when the length exceeds several wavelengths and must be considered when analyzing line behavior.

This means that a low SWR is not necessarily a good thing. It can indicate a lossy system rather than indicating a good match. One way to differentiate is to look at the SWR curve over a band of frequencies. If it is broad and flat, the cable is probably lossy (or you have a dummy load for a termination). Real antennas are typically only close to design impedance over a narrow frequency range (typically less than 5% around the design frequency), so the SWR curve should quickly rise as it moves away from the center frequency of that range. Anyone who says he has a broad flat SWR is probably really telling you he has a pretty good dummy load for an antenna system.

(Note there are exceptions, antennas such as discones and log periodics present a near constant impedance over a large frequency excursion. But in general a low antenna system Q is indicative of low efficiency and high loss, IE the behavior of a dummy load.)

5845. Color identification

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-26 00:00:00 UTC
From: Pushkin <pushkin@hal-pc.org>
Message-ID: <3272DCB6.5C7B@hal-pc.org>
Source record: 214021

When I first became a ham some 40+ years ago, I didn't have to contend with the problem my teenager has to overcome.

He is interested in electronics and related electrical matters, but is hampered by an inability to distinguish red from green from brown. Technically, he has dichromatic vision (red/green color blindness).

This difficulty has caused more than a few sparks to fly, circiut boards to fry, and breakers to pop open. Color-coded components require him to seek the advice of others, who are not always intent on giving him accurate information (just for the fun of seeing what happens when his sabotaged efforts are powered up.)

I'm going to try some some tests with him shortly which will employ color filter gels to see if there is any benefit in that approach. If any of you similarly-affected folk out there have discovered reliable methods of color identification, I would appreciate your sharing your techniques with me so that I may work with my son to overcome this troubling obsticle.

Many thanks,

Al

5846. Special Event Station W2P

altavoz: No hat required for 5/8 w. A 5/8w is much better for vert'
omni directional than 1/4w . Same coil for 1/4w but tapped a little
different . Radials must be 180 degrees, straight down, with
"wiskers" (going down 1/4w from feed point, some 1/4w radials at
45 degree angle...they form a cone).
A hat on 5/8 w will effect the pattern , try it.
For more gain, put a hairpin (<1/4w shorted stub) on top of 5/8 then
another 5/8w vert on top of that . Or the whole ant' a 5/4w and a
colinear stub pointing down (open end down , at the 5/8 w point)
Coax up thru "tube" Radial system.

> to a given frequency.
>
> Steve KT4FY

altavoz: No, a 50 ohm ant' feeding a 75ohm coax will
cause a SWR into coax and towards the radio and an exact
length of coax will not reduce the SWR except as
attenuation factor over that length.

> I'd love to hear from experienced 6 meter operators.

Hi John,

I have been on and off 6 meters since the 50's and its a strange band.
That's the attraction! But to your question, with 10 watts and an
average antenna I doubt very much you could talk that far. Even with
the band open (E skip)you you would probably shoot over that distance.
Now if you go to big power and large array (on both sides) you might be
able to do it on a regular. You might see what the repeater's on 6 are
upto. If high enough maybe they could help cover the distance you want
on FM. That's not really my area of knowledge.

I'm looking for a copy of the service manual for the 212, or if you have one, could you tell me the procedure for adjusting the transmit/recieve frequencies, or at least where the adjustment is located. Any help with this would be much appreciated, as I think my 212 must be more than 2500 Hz off frequency.

Thanks,
Brad.

altavoz: You dont need to cut in 1/2 wave multiples
since it wont change the SWR except thru a very small
increase due to decreasing attenuation over length.
H.F. has very low attenuation on RG8

Brian,

The point that we no-code advocates are making and fighting for is that you and the thousands and thousands of technical professionals like you should not *have* to pass a code test ...

The theory and rules/regs writtent test is all that is relevant to today .. code is no longer relevant as a test requirment ... if you want to lear the code and use it, fine, but you should not be forced to use it nor barred from HF because you may have no interest in or natural ability for the code ...

Your observation that it's an old boy, keep-'em out mechanism is quite accurate ... we want to change that ... you might want to consider hanging around and participating in the discussions here for the purpose of exposing the pro-coders to your views ... it may not do any good, but at least you'll get a better feel for which side you wish to support in the comming battle for change and modernization ...

73,

>with intelligence who doesn't give a damn o-about CW ... and there are
>LOTS of us ...

Interesting to hear the words "absurd" and "insulting" coming from your keyboard Carl... usually you only provide examples of the above. If, as you say, you know and use the proper proceedures on HF, your behaviour in this group certainly dosn't reflect it. Frankly, I don't care one "dit" whether you like CW or not, of more concern to me is your open hostility to those who do.

>Secondly, I am not a masochist ... I'd much rather work and get the
>rules changed than submit to your hazing ritual ...

I'm not sure I would call endless berating of this NG with your indolent tripe "work". Sounds a lot more like whining to me. Again, if you spent half that much effort working on the code, you could just forget about it and enjoy your HF privs. This is not my "hazing ritual", it is the FCC requirement. Has been since long before I was born. Get used to it and move on. Learning code is not that difficult.. 5 year olds have done it, deaf people have done it, should be a peice of cake for a self-proclaimed RF wizard like yourself. The only thing holding you back is your own "I want it now" attitude.

It would only age 4 years in 4 years if (1) there are no new hams, or the the age of the hams is getting one year older every year. Either way, the hobby is ultimately doomed.

Look at it this way. In 40 years, the average age of amateurs would have increased by 30 years. If the average of amateurs is now 50, what will the average amateur be in 60 years - dead.

If any activity (not just amateur radio) is to survive long term, then the average age of the people involved in it must either be stable, or changing with the average of the general population.

Mark.

: vanity call system. It'd be nice to be able to look up who held a certain
: call previously, see the history of a callsign, etc. Also, it would be fun
: to be able to see a particular person's complete ham history...a database
: with *all* previously held callsigns, rather than just those held in
: uninterrupted sequence. (For instance, my records show that I was
: previously N1QHF (briefly), but a historical database would also show
: that I was WB1AFX back in the late 70's, and that there was a license lapse.)

: Is there a database like this? Is anyone working on one? Probably too
: much work...

Not that I'm aware of, but it would be nice.

If you look at the callsign servers at UALR, QRZ! or Buckmaster, they give
the same info that's on the FCC database, as far as the *last* prior
callsign held.

For instance, if you look up KF6CR, you'll see that I was previously WA8RWL.
Problem is, if I change to an AC6xx callsign when I pass the Extra code, the
WA8RWL callsign will disappear. In other words, there is only one bucket on
their database for previous callsign.

One of these idiots (chain-letter) left enough information on their post
for me to find their web-page (and such a cute couple too). All I did
was say I knew their web-page and where they lived and was sending a
copy of their post and their locale to the local post-master. They
emailed me back and profusely apologized. It's amazing that people are
so idiotic to believe that chain letters will make them tons of money
and are perfectly legal.

As P.T. Barnum used to say...there's a sucker born every minute.

I'm looking for some information on some ideas for a 2 meter
antenna. My call is N3XZX. I basically recieved a homebrewed antenna from a
gentleman in Atlantic City. I liked the idea and tend to build a few
myself. It's just a plain old ground plain antenna, The one i recieved was
a quarter wave and i was wondering if there was any ideas and info for
making the same type but creating a 5/8 wave.
I heard for a 5/8 you need to have a top hat, is this true? Also any
info on whether this 5/8 is a good antenna comparing it to the quarter wave.
Any info would be greatly appreciated!
Thanks,
N3XZX
(Chris)

Please carbon copy responses to x32-viper_ck@juno.com so I don't miss
any good info

I've been watching (and waiting) this thread with interest for a couple
of weeks now; after getting up very early each morning and checking the
UALR site and seeing my same call listed.

What struck me this morning is that I haven't had this much anticipation
about ham radio since mid-July of 1965 after passing my novice exam and
watching my Elmer put it in the mailbox. Being twelve years old at the
time, I checked my mail daily until the license appeared in early
October with two weeks of my one year non-renewable licensing period
already expired. I think that kind of puts "instant gratification"
desires in perspective!

>does make a difference.

Your right, I'd much rather have 75 ohm 1" hardline WITH VSWR than 50
ohm RG-58 at 450 Mhz.

>2. 100ft of RG-58 on 28MHz with an SWR of 20:1 and *no feedline radiation*
>does make a difference.

Again I'd rather have 75 ohm cable TV hardline .5" than RG-58.
Cecil is right, the general rule is get what you can for the lowest
loss. Hgh VSWR adds a LOT of loss to an already losssy cable.

Jim,

How dare you try to attach YOUR copyright notice to quotes of MY
writings?

I am flattered, in a way, that you appreciate my comments about you so much that you save them, but you really can't claim them as your own, just because they're ABOUT you ...

One last thing ... they do lose a bit when taken out of context like this ... perhaps the next time you feel the urge to regurgitate them, you'll include enough of the pro-code drivel that prompted them that they can be taken in context instead of in isolation ...

5879. Pro Code and No Code Debate

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-26 00:00:00 UTC
From: brianb@gte.net
Message-ID: <327446f3.9087566@news.gte.net>
Source record: 214106

Hello All,
I am a non Ham who's been a technichian for 23 years and I've been reading these threads for awhile now. I work for the FAA on Naviagational Aids, Communications, Arts/Radar Facilities etc....
I own a Drake R-8 receiver and enjoy it immensely.
Ive been wanting to get into HF for a long time as I get a great thrill from talking to people all over the world.
I've tried the tapes and using a heath kit paddle keyer but somehow it just doesn't cut the mustard! --)) I really wish there was a tiny portion of a HF band where i could practice low power live time real code. I feel that this would help me tremedously to get up to speed. I think if I were able to do this that I would progress in no time to the point where I could take the tests required for my License. It's NOT the Technical questions that I have a hard time with, it is the Code. Which is why Im writing this post!
I was introduced to HAM many years ago by my Uncle whos very active till today. He is always professional in his contacts and conducts himself in that manner. That along with the thrill of it all began my interests in Ham Radio.
What happened to those days of Professional courtesys and attitudes? When a prospective newbie monitors these groups it sounds like a bunch of two year olds whom yield verbal assaults on one each other. Mindless threads and personal attacks. Not a fine Example to set. When I fire up my Drake to listen I hear every foul word thats been ever spoken!
I don't ever remember Ham Radio being like this before. Is this what Ham Radio has become? If so, it's future doesn't look too bright.
I really dont think it's that bad but those and you know who you are need to get your act together and start acting like professionals out there in what was once a Truely RESPECTED Hobby not just by Hams themselves but by the public who tune in Daily to the many frequencies in use.
Now getting back to the code issue. Perhaps if a certain small band of freqs could be set aside, many more like myself could practice code in a real world environment at a low power and we also could become Hams that contribute to this Service. I really would like to but Yes Im one whom hits this mental block. I think sometimes it's lack of motivation, other times Im just burnt out from all the technical stuff I work with all day long, but I do think that if I could just practice Live at a Low Power level and make some contacts that that would be the motivation to get me going to get past this mental block. I know from many fellow Techs that I work with that there would be many new quality Hams entering the service if we could just get past this.
However, it seems like there are many out there that oppose any

changes. They want the Good Ole Boy lets weed them out and keep the bands to ourself concept and are unwilling to give in on this.
I myself wish nothing for free. I like many others just need some help so that we too can become part of the Radio Ham Service.
I know from reading here that many will flame me! Oh well Go for it!--))
It's just that all my life I and many others want to be a Ham and assist others in times of need. Im not interested in VHF/UHF, 2 meters etc... I prefer HF privliges and the Code has been a big stopper for many of us out there. As far as the elimination of the code. Im not for this, ironic as it sounds. I would just like an environment that would allow me to practice it in a real world environment and make actual contact to get me and others past this barrier. I get excited just thinking about making contacts via CW.
Well these are just a few of my thoughts for whatever they are worth after reading the many posts here.
Some of yous out there seem to really have your act together technically and otherwise and thats why I still read your posts! They are enjoyable!
For you others that attack other people, insult down to a very personal level and practice your foul mouths you are a Sad Reflection on the Ham Radio Service!
Sincerly,
Brian

Source record: 214107

Rich & Katy Mulvey (mulveyr@ll.aa2ys.ampr.org) wrote:

: Sure, and we'll end up with even less of a signal-to-noise
: ratio than we have now. It can *ONLY* get worse as we get more
: and more neophyte USENET readers who don't bother to learn even
: the basics of what is expected on USENET.

Well, it *has* been a few months since we had this flamewar. <sigh>

: No, you send a copy of it to posters who violate the convention.
: Yes, they may receive a few hundred, or more copies. That's known as
: a "learning experience." The rational poster will then realize that
: there are social conventions that should be observed in USENET,
: just as in face-to-face conversations.

And they will ignore you. This is nothing new; there is a fairly low S/N on
most of the newsgroups that I read.

: the burden of weeding the chaff out on the innocent reader, instead of
: the entirely reasonable expectation that people who post will do so with
: a modicum of intelligence as to the newsgroup subject. If I go to a lecture
: about microwave construction techniques, I have a reasonable expectation
: that the speaker will discuss stripline techniques when I get there. If
: he starts discussing flower arranging, the audience has every right
: to boo him off the stage until he gets a clue. Is it so unreasonable
: to expect the same, here? Especially when we have the equivalent of
: the flower-arranging class next door, in rec.radio.swap?

I don't have any trouble identifying the posts. The subject line usually
has a tag, such as FS: or WTB: If I'm not interested in that particular
piece of equipment, I don't read about it.

Here's an idea:

Accept, as a given, that neither you nor any of the Usenet purists are
going to halt this practice. After all, we've been here before, and the
posts that offend some so greatly, are still here.

Consider renaming rec.radio.swap to rec.radio.amateur.swap, since hams are
the majority population there. Make the charter fairly broad, to include
virtually *anything* that hams might buy, sell or trade, including, but not
limited to test equipment, receivers, transmitters, transceivers, tubes,
parts, etc.

-or-

Consider creating the properly named newsgroup, rec.radio.amateur.swap.

>privileges as a result "keep" people out? Seems that its a requirement,
>you either do it or don't, and you either get the privs associated
>with it or not.

It "keeps out" anyone who doesn't want to learn/use Morse code. This is ridiculous and unwarranted. As for it being a requirement, that is a vestige of a byegone day that desparately needs to be removed. ANd the privs are NOT associated with CW ... the privs are more PHONE privs .. to CW is COMPLETELY irrelevant and it is, JUST A "FILTER" to KEEP PEOPLE OUT ... and those prople are ALL people who are otherwise interested in ham radio, but not in the code ... that is grossly unfair and needs to be rectified to fit with today's world.

You also omit Conn's blatherings about how it "is government's obligation to limit access to HF so all the would-be American hams don't trash the bands for foreigners" ... why do you choose to omit some of the more blatantly absurd parts of Conn's blatherings and attempt to defend the less obviously absurd parts (when taken in isolation, they may be less obviously absurd, that is)???

>Interesting to hear the words "absurd" and "insulting" coming from your
>keyboard Carl... usually you only provide examples of the above. If, as
>you say, you know and use the proper proceedures on HF, your behaviour
>in this group certainly dosn't reflect it.

Why, because I refuse to continue to eat shit at the pro-code trough?
I know how to behave on the air .. this is not "on the air" it's the
internet, and it's acceptable to argue, even vigorously, here ...

>Frankly, I don't care one
>"dit" whether you like CW or not, of more concern to me is your open
>hostility to those who do.

TRY TO UNDERSTAND THIS WITH AN OPEN MIND IF THAT IS POSSIBLE FOR YOU >>>
THIS IS *MOST* SINCERE AND HONEST >>>
I'm NOT hostile to those who like CW ... I'm hostile to those who insist
on craming it down EVERYONE's throats and telling them they're lazy,
good-for-nothing, not-worth-to-call-themselves-hams if they don't lap it
up and say "more, please, more" ...

This comes from two decades of having a bunch of holier-than-thou
assholes and jerks, many of whom don't even know Ohm's law or how to
build an oscillator or how to use an oscilloscope or spectrum analyzer
or how to solder properly, look down their noses at me and other
technical professionals who have made significant contributions to the
radio art far beyond current ham technology and having them tell us
"You're no good because you don't do code" and being artificially and
unfairly locked out of the HF bands by these same backward, bigoted
views ...

>>Secondly, I am not a masochist ... I'd much rather work and get the
>>rules changed than submit to your hazing ritual ...
>
>I'm not sure I would call endless berating of this NG with your indolent
>tripe "work".

The work is in organizing people and opinion to get the rules changed
.. don't delude yourself into thinking that what you see here is all
that's going on ... and the comments are far more in favor of what I
say than against ... and e-mail is 10:1 in favor ... the bulk of
negative here comes from about 5 people who say the same crap over and
over and over again ... but of the newcomers, it's mostly favorable ...

>Again, if you spent
>half that much effort working on the code, you could just forget about it
>and enjoy your HF privs.

Ah, yes, the old "just knuckle under and get it over with" plea ...
again, I'd rather get the rules changed to be more modern and reasonable
..

>This is not my "hazing ritual", it is the FCC
>requirement. Has been since long before I was born. Get used to it and
>move on.

Yes, it's long-since outdated ... time to change it ...

>The only thing holding you back is your own "I want it now" attitude.

No, the only thing holding me and others back is a set of ridiculous,
outdated, backward, counter-productive rules that need to be changed.

From:

Dennis A. Mason
damason@uswc.uswest.com

(I agree with every word, but he was too mild-Burt K1OIK).

You ham radio ops are a bunch of cheap skates. You're always trying to screw us commercial dealers out of a radio or repeater for some stupid project of your own. Most of your repeaters are all closed and are absolutely worthless for emergency use. You all claim to be such a big help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't contribute anything to disaster relief any more.

All you do is whine and moan about how much a piece od commercial equipment costs. Well that isn't entirely true. You do go to hamfests and whine and moan to vendors about how much their equipment costs as well. You idiots have absolutely no idea what goes into the design production and marketing of any piece of gear, commercial or not. I truely feel sorry for any poor bastard that relies on making a living from
you cheap SOB's.

Why not give us legitimate commercial interests your VHF, UHF and SHF spectrum so that we can do something useful for mankind instead of letting
a bunch of retired has beens have access to billions of dollars of spectrum for nothing more than comparing prostate troubles during the day
when the rest of humanity is doing something useful... like working for a
living.

I'm sure to get some flame mail over this so I might as well make it good... You guys are worse than CBers. All you do is bitch about code requirements and how hard the tests are to get a license. Well I got news
for you. You hams should be relegated to about 400 KHZ of spectrum in the 20 meter band. It should be allocated into 40 distinct channels 10 KHX apart. Maximum power 5 watts ERP. All testing and call signs should be revoked and every 18 wheeler should have a mass production, $50 20 meter ham rig installed. Then I suppose you all could bitch about paying
a whole $50 to whoever is desperate enough to get into that market.

73zzzzz good buddies>>>

5891. Truth in contesting on a TEST weekend

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-27 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <3273AF8C.1802@ccsnet.com>
Source record: 213968
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

From: KI7FK@KI7AE.#SEOR.OR.USA.NOAM
To : ALL@USA

CONTESTING... It seems the bands are filled with the sounds of "CQ CONTEST"
almost every weekend these days. I guess I wouldn't mind so much if there
was some room left for those of us who do not have an interest in the
"You are 59, Good Luck in the Contest" aspect of Ham Radio. Anymore,
the voice is a digital recording and you are only talking to a machine in
many cases. I have heard many over-seas stations complaining about the
"noise" generated by US stations when contesting is going on. I can only
imagine what it must sound like at times. And most importantly, are
Contests ever suspended when a disaster strikes so EMERGENCY communications
can be passed? I have yet to see that happen, and I have heard it has caused
problems in the past. Let's be fair to everyone and leave some of the
spectrum open for other uses as well during contests.

On the same subject, I wonder if CONESTING meets any of the five
fundamental purposes of the Amateur Radio Service as described by the FCC in
Section 97.1 of the Amateur Radio Service rules. These "purposes" are why
the Amateur Radio Service exists at all;

(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary non-commercial communications service, particularly
with respect to providing emergency communications.

< It can cause problems for Emergency Communications. >

(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.

< What are the contributions from Contesting? >

(c) Encouragement and improvement of the amateur radio service through
rules which provide for advancing skills in both communications and

technical
phases of the art.

< Contesting has no connection here that I see. >

(d) Expansion of the existing reservoir within the amateur radio
service
of trained operators, technicians and electronic experts.

< Nope... >

(e) Continuation and extension of the amateur's unique ability to
enhance
international goodwill.

< Contesting causes more discontent than goodwill from what I am
hearing.
I don't see where "international goodwill" is served by "you're 59"
>

I admit that there are many Hams that get a lot of enjoyment from Contesting and I have no problem with that, but Contesting also lessens the enjoyment of the hobby for others. It just seems to me more could be done by those sponsoring the Contests to compromise with those that do not share the same interest. We need to share the spectrum at all times so that all Hams have an opportunity to enjoy and grow in this exciting hobby.

Here is what other hams say about me:
Burt

Its obvious to me this guy (smartass) never read any of your posts
on alt.support.divorce. Just like a ham to shoot his mouth off
without having any of the facts.

Burt, I want to say keep up the good work. These "hams" need to
be shaken up as frankly, most of them are losers. I do not call
myself a "ham", I am a radio experimenter. I got my amateur radio
license to allow myself access to radio frequencies.

BTW, my wife (of 8 years) really enjoys your posts making fun of
ham operators. At one time I was involved with the "social" side
of ham radio... so she has seen some of the things you mention.
She was able to reform me and show me the error of my ways.
You should start a comic strip.... lets call it "Hambert".
(Model it after Dilbert to a degree) I'd bet money you could
get one of the ham rags to run it.... or maybe on a web site?

Best Regards,

Name withheld

Well Carl, judging from your call I would assume that you received your ticket a few years before I received mine, some time in the mid-to-late sixties perhaps? VLSI integration, DSP etc. were all in the future. Computers were around but there is little comparision between the IBM Call-360 OS and DOS. There were intranets but these were primarially government and defense contractor oriented. And as you say CW was a lot more relevant.

Whether your first ticket was a novice or a technician, the requirement still included a 5 wpm send and receive test. Solid copy was required too. Many spent the year of their novice license on 2 mtr AM never attempting to improve their code skills on the HF segments. When the year was up, the many of the ones that studied the general class theory became technicians while for the rest CB beckoned.

Since CW was more relevant what was yout excuse then? It certainly wasn't outdated then. Was it just too much work to put forth the effort then?

Ham operator Jokes:

1. What is the thinnest book in the world?
What hams know about women.

2. How does a ham take a bubble bath?
He eats beans for dinner.

3. What's a ham's idea of foreplay?
A half hour of contesting.

4. How can you tell if a ham is sexually excited?
If he's still breathing.

5. How many hams does it take to change a roll of toilet paper?
We don't know...it has never happened.

6. What's a ham's idea of helping with the housework?
Lifting his leg so you can vacuum.

7. What does a ham consider a seven course meal?
A hot dog and a six pack of beer.

From: WF2R@WA2YSM
To: RACES@NEBBS
Subject: Is it really necessary?

There has been much discussion about ARES/RACES etc on the packet system. One message "crows" about the quality of volunteers in California, another "cackles" about a dispute between RACES and ARES members in TEXAS.To all these people whom are looking to carve their niche in amateur radio by participing in so called emergency communications: you are wasting your time. Emergency communications is already provided by many other groups, including the american red cross. Yes, the ARC was granted use of 220-223 MC by the FCC for their emergency communications use. Their attorney who petitioned the FCC is also the ARRL General Counsel in WASHINGTON DC. Most of the members belonging to these groups ARES/RACES are bored, lonely people with no social ties, the remainder are CONTROL FREAKS, people that want to do ONLY THEIR WAY. Just read the packet messages that come out of California regarding this topic, and judge for yourself. If you are new to this hobby, and somehow you have been corralled into this "we have to provide emergency communications syndrome" you can easily bail out now and avoid agruments, personality clashes etc. Just tell the group leader you are out, you will be better off in the long run.

You are a Ham Radio Operator if...

... when you're at a restaurant and the waitress asks you if you would
like a refill of your drink and you say, "Q-AS-AL".
.. when you overhear two secretaries from your department talking about
you
in the ladies' room because the vents are connected to the men's room
and you
approach one of them and say, "I couldn't help but overhear your
'traffic'."
... you're doing your day job as a DJ of a 100,000 watt FM commercial
radio station and at the top of the hour you say something along the
line's of "The best music of yesterday and tomorrow, KB8GYS
Cincinnati."
...you get into auto accidents while passing through new parts of the
country
looking to see what kinds of antennas people have on top of their
houses.
... your XYL, who is still 130 lb. and tremendously attractive comes
to you in a hot pink, topless teddy and starts nibbling on your
shoulder and you tell her to hang on for a minute because you're
just about to make that contact with East Molohavnia.
... when your club's repeater and the TV station that you work for
are in the same building and are damaged by a hurricaine and you
go up and fix the repeater BEFORE you fix the television station.

This joke was sent by John, KB8GYS

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still
employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of
the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any
other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

>
>Well Carl, judging from your call I would assume that you received
>your ticket a few years before I received mine, some time in the
>mid-to-late sixties perhaps?

I was first licensed in 1975 ...

>
>Whether your first ticket was a novice or a technician, the
>requirement still included a 5 wpm send and receive test. Solid copy
>was required too. Many spent the year of their novice license on 2 mtr
>AM never attempting to improve their code skills on the HF segments.
>When the year was up, the many of the ones that studied the general
>class theory became technicians while for the rest CB beckoned.

I moved radpidly from Novice to Technician (full general theory at the
FCC office) ... because I was employed at the time in the design of VHF
marine radio gear and was involved with a bunch of VHF/UHF hams in
building repeaters etc ... I them moved on to packet radio and
satellite.

I have worked HF to the limits of my license and for two years that I
lived in Mexico, enjoyed full HF privs as XE2/WA6VSE ... SSB was fun,
but I didn't have a chance to do any of the development work I want ot
do on HF then because I was living and cruising on a 42' sailboat and
didn't have room for lab and test equipment ...

>Since CW was more relevant what was yout excuse then?

I didn't say CW was more relevant when I first became a ham ... you came
across as such an olde farte that I thought you were from the 20s ...

>It certainly wasn't outdated then.

In my view it was ...

>Was it just too much work to put forth the effort then?

Don't try to equate "I've got better things to do with my time than
learn Morse code." with "I'm lazy." That is a typical pro-code tactic
.. tell everyone that they're too lazy and don't deserve anything, just
because they're not interested in the code ... that's hogwash ...
noarrow-minded, bigoted, hogwash ...

If the priveleges gained by passing faster Morse tests had ANYTHING to
do with the code, it would be one thing ... but they don't ... faster
code speed gets you more phone privs ... makes NO sense ... it's just a

mechanism to keep out people who don't agree with the olde fartz ...
nothing more ...

And THAT hurts ham radio ...

I did that a long time ago.. You have to set at 300 baud, and 7-E-1, if I recall correctly.. You might even need 110 baud. But from what I remember, the TDD had to answer, and they had to hit the space bar a few times, to 'connect'. And it only worked on a crappy modem, so I don't think it will work on newer modems, unless someone has developed a software.
Remember: A modem has to CONNECT, via a result code or 'handshaking'. TDD's just start talking. Plus, TDD's only 'talk' when they type. Call a TDD, you can tell how slow someone types: "beeeep" (pause) beeep beeep beep (pause), where a modem is constant noise.
Good luck, let me know wheat happens.

> Hi Joel, got to nitpick a tad.
>
> 1. 100ft of RG-58 on 440MHz with an SWR of 1:1 and *no feedline radiation*
> does make a difference.

altavoz: I get 271 "1/4 wavelengths" and that makes it an ODD multiple
of 1/4w and therefore it will radiate cause the open end of the coax
will see a short on the outside end of the coax at the radio end.
.66 VF RG58 , assuming a high SWR at load and 1:1 at radio.

> 2. 100ft of RG-58 on 28MHz with an SWR of 20:1 and *no feedline radiation*
> does make a difference.

altavoz: The diff we're talking of is trimming the line and in your
case trimming the line will increase the RF (feedline radiation)
on the outside of the coax By pulling down the Z seen on the outside
by the antenna . Trimming 1/4w will peak the FEEDLINE RADIATION.

>and needs to be rectified to fit with today's world.

Many times people have to do things which appear to be irrelevant.
When I wanted to drive a car, I had to take a 15-hour driving class.
I learned such exciting things as hand signals. But, I still had to
take the class.

Just this weekend I had to suffer through a 10-hour Hunter Safety
Class to get my hunting license. Despite being a Certified NRA
Pistol/Rifle/Shotgun instructor, I had to sit through the class.
99% of it was firearm safety that I use on a daily basis. But, I
still had to do it.

What is "relevant" to you, Carl, is not necessary relevant to the
rest of the amateur population, and vice versa. CW continues to be
a highly-used mode on HF. It is still used by numerous foreign
amateur stations for communication. To promote international
goodwill, one must be proficient in CW to work these foreign ops.
Thus, the test is relevant in that respect.

Unfortunately, our testing system in imprecise. We grant globs of
operating privs for passing small, condensed tests. In an ideal world,
if you want to work SSB you should be tested on SSB only and receive
SSB privs only if you pass. This is the "mode-based testing" I have
endorsed numerous times again and again. Unfortunately, as radically
opposed to CW as you are, there are others equally-opposed to a
mode-based testing scheme.

>You also omit Conn's blatherings about how it "is government's
>obligation to limit access to HF so all the would-be American hams don't
>trash the bands for foreigners" ... why do you choose to omit some of

>the more blatantly absurd parts of Conn's blatherings and attempt to
>defend the less obviously absurd parts (when taken in isolation, they
>may be less obviously absurd, that is)???

They were irrelevant to the point at hand I was making.

There is some truth to Conn's statement. Many foreign stations (indeed, the local club I am Vice President of has foreign operators as members) view american stations as uncooth and unsophisticated. They look down on Americans in the same light you look down on contesters.

Now, back to Conn's statement. First, I must digress for a moment...

In any "civilized" society, there are set rules for societal interaction. [By rules I don't necessarily mean rules & regs that the FCC is setting, just standards by which we conduct ourselves with one another.] This is applicable in amateur radio as well.

Normally, as an infant you observe the behaviour of your parents and siblings to draw a basis for how you should act. As you mature that group from which you draw upon expands.

In Amateur Radio, we had a similar mechanism in place. It was known as the Elmering process. New hams would have elmers that would work with them to help them get their first license and get on the air. The elmer was a crucial part of the new ham's "societal development", because the elmer helped provide the new ham with guidelines for interaction with others.

As we've seen over the past decade, the "decade of greed / decade of self-indulgance" in the 80's gave us a generation of people who are into "instant gratification". Their focus is "me", and "I want it now". [Being a product of the 80's during which I spent my early adulthood, I too suffer from the same mindset to some degree, I must admit.]

Amateur radio responded in several ways. Primarily we made it easier for them to get ham licenses by creating the VE system, creating the codeless license, and now the electronic filing system for licenses. None of these advancements in of themselves are evil, but they merely create an environment which fosters potential problems.

Today's amateur has no elmer. He picks up a book at Radio Shack, takes the codeless tech test a few weeks later, and in a couple of days has his license via the Internet. Now he's on the air, with absolutely no guidance or "elmer" to help him/her to adapt to the amateur radio world.

When this happens in the animal world (parents dying off before the children are fully developed emotionally) you end up with a bunch of unruly, unkempt adults. They had no basis for behavioural guidence.

I don't think that you will disagree that HF is a different animal than VHF. The rules are somewhat different for that societal interaction.

Now, if you unleash 170,000 codeless techs on HF without giving them the proper guidence, then yes, you will have effectively unleashed what appears to be 170,000 unruly amateurs onto HF.

That, I feel, is a legitimate concern for people who use HF. It is especially important because unleashing people on HF might have an increased negative impact on our stature in the eyes of other nations. As such, the eventual implementation of codeless HF access must be done so tactfully to prevent these types of problems from occuring.

Thus, Conn's statement has some merit.

Jim is correct. You must also realize that CW is workable on ANY ham band! With a reasonable setup on VHF/UHF you can work stations for 50 miles around (more or less of course). Of course you can beg/borrow/steal (theft is *not* recommended) a receiver and copy W1AW and a host of other stations without transmitting at all. Sending code is much easier than receiving, so practice receiving! Good luck, Al WQ0J

>Brian
Brian,
I echo the comment someone else made regarding your desire for a
slice of spectrum; there is such a portion of HF--it's called the Novice
bands.
There are some who say they can't learn the code. I can't judge them,
but I happen to believe darned near anyone can learn it (my 15, 14 and 10
year-old sons have their Tech+ license and are almost to General). You
can too, I'll bet! Get your Novice license (an extremely easy theory and
rules test, and a simple 5 wpm morse code test) and you can get on the
air and have great fun. And you're right, your speed will go up as you
operate more and more.
My opinion (and I know there are many who disagree) is that the code
is a reasonable test that just about anyone can master if they
want to. And I like having some sort of "filter" that makes people
work for the privilege of operating on the public airwaves. In a strange
way, I wouldn't mind if the test would be completely irrelevant to
current radio practices, so long as it was something people had to work
for. Some argue CW is no longer relevant; that's okay with me. The
theory tests have gotten so very easy (all of the questions are leglly
published) that it doesn't take much to memorize the offered answers.
I apologize for my ham radio mates here who are rude and insulting. I
agree with your assesment of their behavior. It's an embarassment to the
hobby. Regardless of which side of any issue they might be on, I believe
as you suggest that they bring discredit to the hobby when they are
vulgar and downright nasty to one another. Please don't judge the state

of the hobby by their behavior. Most hams I've met are very nice people who are similarly offended.
Interestingly, I find the most politeness on CW. Maybe it's because folks talk in "code" and are so brief. But whatever the reason, I think you might like it. Ham radio is a reflection of society (more or less), so you'll find good eggs and bad alike here.
If you live in Hawaii, I'll be gald to help you get a license. If you live elsewhere, you might be able to get the name of a ham radio club from the ARRL, or your local Radio Shack just might know a ham or two who could help you.
Let us know how we can help you.
73,
Bernie Skoch, NH6I
Honolulu

5909. Attic 2 metr beam

I just bought a house where antenna installation outside is forbidden.
the attic apperars to be large enough to put a small beam. Anyone out
in radio land wiyth this expereince? Sold my 10 ele 2 meter beam today
so need to kbnow what to plan on when I move next month. Thanks ! Email
at kb8tpw@earthlink.net or post here. Also have a GAP DX Challenger
2-160 meter verticle that has to go !!! Let me know if interested.

5910. The QSO breakout

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-27 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <3273AEB1.33FC@ccsnet.com>
Source record: 213987
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I download the following of a RTTY System 64 BBS-K1OIK:

HERE IS A STUDY DONE ON THE +TYPICAL+ HAM QSO. A LITTLE BACKGROUND INFO
FOLLOWS. THE STUDY WAS CONDUCTED BY TWO HAMS THAT MONITORED AND TAPE
RECORDED HAM QSO'S AT VARIOUS TIMES OF THE DAY, 24 HOURS A DAY 7 DAYS A
WEEK FOR 3 MONTHS.

THE TABLE OF PERCENTAGES OF QSO TIME SPENT DISCUSSING SELECTED TOPICS -

1) DISCUSSIONS RELATED DIRECTLY TO
AMATEUR RADIO:

A. WAVE PROPAGATION - 2 PERCENT
B. THEORY/TROUBLE SHOOTING - 3 PERCENT
C. ARRL/MARS/CD/CLUBS - 5 PERCENT
D. SPECIAL UHF/OSCAR/SSTV - 7 PERCENT
E. HOME-BREW - 4 PERCENT
F. COMMERCIAL EQUIP - 6 PERCENT
G. RULES AND REGS - 5 PERCENT
H. PROBLEMS TVI/QRN/QRM ETC - 5 PERCENT
I. GENERAL SIGNAL REPORTS - 12 PERCENT

2) DISCUSSION NOT RELATING DIRECTLY TO AMATEUR RADIO:

A. FAMILY ACTIVITIES - 4 PERCENT
B. HEALTH/ILLNESS 1 PERCENT
C. CURRENT EVENTS - 5 PERCENT
D. PERSONAL INTEREST - 5 PERCENT
E. REAL/PERSONAL PROPERTY - 3 PERCENT
F. GEOGRAPHY/WX - 6 PERCENT
G. PUBLIC FIGURES - 3 PERCENT
H. GREETINGS/FAREWELLS - 19 PERCENT

PERCENTAGE OF QSOS RELATING DIRECTLY
TO AMATEUR RADIO - 49 PERCENT

PERCENTAGE OF QSOS NOT RELATING
DIRECTLY TO AMATEUR RADIO - 46 PERCENT

UNCLASSIFIED - 5 PERCENT

A EXAMINATION OF THE TABLE INDICATES A GOOD BALANCE BETWEEN THE AMOUNT
OF TIME SPENT DISCUSSING AMATEUR RADIO TOPICS AND THE TIME DEVOTED TO
NON AMATEUR RADIO SUBJECTS.

INTERESTING TO NOTE THAT THE HIGHEST PERCENTAGES ARE FOR
GREETINGS/FAREWELLS AND GENERAL SIGNAL REPORTS. (HI HI)

Have you listened to the ham bands at all!! NOT MUCH DIGITAL when compared to CW and SSB. Your saying all the really technically minded are Techs? Come on, digital is boring (been there)and has not enjoyed the great success you seem to think it will to date. I guess the generals and above are not quite as bright as you are and need to be instructed on how to enjoy these modes. Well instruct me--- how I can I enjoy something that offers me no challenge.

Rick KG7A

5915. Hams and Emergency Services

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-27 00:00:00 UTC
From: waterspout@juno.COM
Message-ID: <19961027.170533.6967.4.waterspout@juno.com>

Thus sayeth Burt:

> Most of your repeaters are all closed and are
> absolutely worthless for emergency use. You all claim to be such a
>big help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't
>contribute anything to disaster relief any more.

Interesting viewpoit Burt... I wonder how you manage to reconcile this opinion with the following:

<begin forwared message>

FEMA to FCC: No Sharing of 2 Meters and 70 CM

The Federal Emergency Management Agency better known as FEMA is saying no to sharing or reallocating the 2 meters and 70 centimeter ham bands to Low Earth Orbiting Satellites. In a letter to the FCC task force currently evaluating new spectrum for use by LEO satellites, FEMA Manager Paul
Reed, tells the committee that his agency opposes any such change.

Reed says that Amateur Radio operators have a history of supporting state and local government emergency operations by providing needed communications. He says that many local communities served by ham radio have extremely limited resources and would be without any form of back-up communications without Amateur Radio.

Reed says that FEMA has been in contact with its state and local emergency management partners across the nation. That it is their belief that authorizing access to the mobile satellite service in the 2 meter and 70 centimeter bands will seriously degrade the ability of these groups to
support their public service requirements.

The FEMA Manager ends his letter by strongly urging the FCC task force to remove both of these ham bands from any further consideration as a new home for Low Earth Orbiting Satellites. He says to leave them for use by ham radio and its emergency service partners, nationwide.

-Amateur Radio Newsline

National Weather Service and Ham Radio

If you're a ham interested in using your skills and equipment during emergencies, you may get a request for help from the federal government. The National Weather Service wants to make more use of hams.

Amateur radio communications was one of the topics at a mid-September Weather Service Conference in Salt Lake City, Utah. Among those invited to speak was Newsline's David Black, KB4KCH.

These are times of big changes for the National Weather Service. The agency is undergoing what's called modernization. Some offices are closing, while others assume more responsibility. Offices which used to issue weather warnings for roughly a dozen counties may have to cover more than twice that number under the new plans.

At Salt Lake City, meteorologists from eight western states discuss establishing and strengthening amateur radio communications networks. Paul Flatt, KC7OVO, is a Weather Service warning coordination meteorologist.

"In Tucson, Arizona, we started the year with about 40 ham radio operators as Skywarn spotters. I think we are up to 75 or 80 at this point in time. I would like to see that grow higher, to put an upper number on
it, I couldn't really do that. To cover the area so the entire portion of where I'm at, southeastern Arizona, has some ham radio operators somewhere nearby." KC7OVO

The Conference addresses issues including how to establish spotter groups, frequencies and resources available, and the various types of emergency communications groups including RACES and the Amateur Radio Emergency Service. Rich Douglas is the Conference organizer.

"We could do a lot more and hope to do a lot more and are trying to plan to do a lot more with amateur radio. I would say three or four years ago we did not take advantage of this wonderful opportunity. Now we are trying to organize ham radio networks. Working with our offices, each of the 24
offices, for about two or three years most of our offices have installed radio equipment. Our Regional Director, Dr Tom Byer supports this program. Ans he not only says he does, he does with his budget. He makes sacrifices in his budget to make sure we start gettin' some equipment." Douglas

Concern is expressed over the ability of hams to provide emergency communications services if their frequencies are invaded by commercial users. Several meteorologists say they will write letters opposing possible allocations to a commercial satellite service said to be considering the 2 meter and 440 MHZ amateur bands.

Conference attendees learn about amateur equipment and radio systems, packet and amateur televison. Even with Doppler radar and other high tech equipment, hams are needed to help confirm conditions forecasters often
suspect but have no proof exist. Again, Rich Douglas:

"First of all, they're very dedicated people. We have found they are among the most reliable group that we can count on. And of course the advantage of instant communications by way of a radio." Douglas

The Weather Service continues to install amateur radio equipment in various offices, as the agency moves ahead with plans to make more use of ham radio in serving the public.

Skywarn storm spotting isn't the only amateur service that forecasters learned about during the Conference. Attention also focused on using ham radio for backup communications when normal circuits fail. That's exactly what happened in early September when Hurricane Fran knocked out phone
lines to Weather Service offices in North Carolina.

-Amateur Radio Newsline

<end forwarded message>

Apparently both FEMA and the NWS disagree with you Burt. They'd like to see even more participation by hams. Here in the Houston area the EOC, the local NWS office, and the Red Cross are all calling for more assistance from hams, not less. One can only hope that the next disaster to strike Cape Cod will help you see a glimpse of reality.

SB DX @ WW $OPDX.276
Ohio/Penn DX Bulletin No. 276

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 276
BID: $OPDX.276
October 28, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N4AA & QRZ DX, K8VJG, KF0UI, 9M2/G3NOM, DL2HEB, DL5EBE, EA3BHK, F6AJA, G4BUE & DX News Sheet, JA1HGY, JA1UT, ON4AG, OZ5AAH and VE3JLP following DX information.

5T5, MAURITANIA. JA1UT and a group of operators are scheduled to visit "Republique Islamique de Mauritanie" for a week beginning November 6th. This is in support of the "Save Africa" aid project in cooperation with the drivers of the famous "Paris-Dakar Motor Rally". SSTV operation is planned in addition to the usual modes. This may be a "first time" from 5T5???. Participating members will be JA1UT, JA1UPA, and JR0CGJ. QSLs to be handled by JA1UT.

9M8, EAST MALAYSIA (Attention 160 meters operator!). The DX News Sheet (DXNS) reports Shin, JA2SWJ, will be active November 2-3th as 9M8HIM on 1824 kHz with 500W.

C5, THE GAMBIA. A few weeks ago, OPDX mentioned that Gary, C53HG had left the The Gambia for Namibia. Paul, VE3JLP, (DX Editor, The Canadian Amateur) wrote to OPDX and that states we may begin to see a lack of activity from C5 now. Paul reports, "My daughter, who taught at the Gambia College of Agriculture at Brikama 18 months ago, tells me that the science teacher there, who occasionally put the college station, C53GCA, on the air has now moved on to a new job and this station is likely, from now on, to be gathering dust! By the way, the college station is the one I briefly put on the air in Februaury, 1995, it was installed by a group of VE1s a year or two before. I don't THINK there are any other resident staions in C5, so it may soon become a pretty rare DX." OPDX has found that C53HN still continues to be active briefly and mainly on CW. Last spot listed on the Ohio/Penn Network was October 21st at 1842z on 14020 kHz.

FH, MAYOTTE. Denise, F6HWU, will be active as FH/F6HWU from November 9-27th. She will be operating mostly CW on all bands, and there may be

some activity on RTTY.

FR/T, TROMELIN. FR5ZU/T was heard this past week on 15 meters (21215 kHz around 1545z). His length of stay is unknown at this time. QSL via FR5ZU.

INDIAN OCEAN DXPEDITION UPDATE. Xavier, EA3BHK, reports the papers sent by Jon, EA2KL, and Luis, EA3ELM, by mail to 3B8 became lost. They sent a fax two weeks ago but they must now wait for their 3B8 licenses until next week. About their 3B9 operation, there is very bad news, at the present time there is no chance for a 3B9 license. On Reunion Island, they will use the CEPT license as announced. You can read about this DXpdetion on the WEB page: http://www.ctv.es/USERS/ea3bhk/dx/indic.htm

KH4, MIDWAY ISLAND. Next weekend look for Ron, W7VWR, to be be active probably as KH4/W7VWR from November 3-10th. Activity on CW will be 25 kHz up from bottom of the band edge and SSB operations on 3800, 7188, 14195, 18130 and 21295 kHz. QSL to CBA.

KH0, MARIANA ISLANDS. Nao, JA1HGY, and others will stay on Saipan from October 31st to November 3rd for vacation, and will be active on all bands. Look for KH0/JA4DND's to be active on 1911 kHz +/- (QSX 1824 for DX, 3799 kHz (SSB mainly), 7007 or 7044, 10 MHz and up on the usauly DX frequencies. QSL via JA4DND home call direct or via the bureau. Also, look for KH0/JA1HGY to be active on 10104, 18074 and 24894 kHz (mainly the WARC bands). QSL via JA1HGY. Other callsigns mentioned: KE6DI/KH0 (QSL via JA1BRK), WH0/WH2Q (QSL via JI1DLZ) and KH0/JR1MLU (QSL via JR1MLU).

OX, GREENLAND. Ben, OX3IPA, Chairman of the International Police Association Radio Club (IPARC) in Denmark, will be active from Nuuk, Greenland, October 30th to November 16th. Activity will be mostly CW on 160-6 meters. QSL will be good for police awards. QSL via OZ5AAH, Preben Jakobsen, 9 Knoldager, 2670 Greve, Denmark with a SASE.

OZ, ROEMOE ISLAND (DENMARK). Ulli, DL2HEB, will be using OZ/DL2HEB/p on IOTA EU-125. His IOTA DXpedition will be from December 22th to January 3rd, 1997. Activity will be on 80-10 meters. Check the IOTA and QRP frequencies, especially on CW, 14040 and 14060 kHz. QSL via DL2HEB or via the bureau.

QSL INFORMATION AND NEWS......
3E1DX active during this past contest weekend from HP1XVH's QTH go to KF0UI.

Correction to QSL info reported in OPDX.275.1 for FS5PL. QSL for the CQWW SSB and CW contests to WX9E. All other FS5PL contacts to KF0UI or FG5BG (NOT via KG0UI has reported).

The new QSL Manager for the DP1KGI-Expedition to Ardley Island (South Shetlands) is DL5EBE. Those who did already send a QSL to DL7VTS (ex. DD6UAB) will not have to send a new card. All cards received via direct or via bureau will be answered soon. DP1KGI was

the first and the last activity from the German Antarctic Station "Ardley". The station, originally established by the Academy of Sciences of the GDR, was taken over from the Alfred-Wegener-Institute for Polar and Marine Research. The station had to be closed last year to keep the regulations of the Antarctic Contract signed by Germany.

F5TCN has received the logs for YA9XL, but only for the December 1st to 24th, 1995 period. He is still waiting for the logs after December 24th.

Jean Michel, F6AJA, reports Gerard, F2JD/5R8EN, has been closing down his station from Malagasy and will be returning to France at this end of October with the last part of his log. ADDED NOTE: Gerard will be going to Panama (HP) November 20th, for at least 6 months.

Jean Michel, F6AJA, reports he has received his 5R8FI QSL cards from the printer, and all direct request will be mailed very soon.

F6BUM has been receiving QSLs for TO5A for February 1996. He has the logs only for the July 96 operation.

NOT THE QSL MANAGER.... F2YT received some QSLs for D44AB. He is not his QSL Manager.... F6EDZ received QSLs for 3B8DZ. He is not his QSL Manager

SPECIAL EVENT STATION. On November 1, 1944, the town of Knokke was finally liberated at great cost of Canadian lives. Each year the fallen Canadians are remembered with ceremonies, fesitivities and a "Canadian Liberation March" on November 1st, and during that Canadian Week. Many Canadian and Belgian veterans, VIPs and radio amateurs, are participating in the events.
This year, the Special Event Station, OS4CLM (which the suffix stands for Canadian Liberation March), will be on the air for the 14th time from Friday, October 25th, until November 5th.
The special event radio station is operated by members of the BAFARA (Belgian Airforce Amateur Radio Ass.), by members of the RNARS (Royal Naval Amateur Society) and by members of the BYLC (Belgian YL Club). This year's members of the Belgian IPARC section will attend on Tuesday, October 29th, for the first time.
A multi-colored OS4CLM-Award will be available to all licensed amateurs and SWLs for any contact with this special event station. They also can get a beautifull QSL-card. Cost of the OS4CLM-Award is 5 U.S. green stamps (no checks please) or 10 IRC's, with all proceeds going to a welfare fund. The money is used to maintain memorials and to keep the station OS4CLM on the air next air. You can contact or listen to OS4CLM on the following frequenties: SSB - 3685, 7045, 14145, 21245, 28545 and 144250 kHz and CW - 3515, 7012, 14020, 21020, 28020 and 144020 kHz; also FM - 145.475 MHz. If you want more information about the Special Event Radio Station, OS4CLM, please contact: OS4CLM, Post Box 110, B-8300 Knokke, Belgium.

V5, NAMIBIA. Clarlie, KY0A, should have arrived in South Africa this past Thursday, and from there he is planning to make another trip into Namibia. He wants OPDX to inform the readers that if anyone hears V5/ZS6YG, please QSL "only" to KY0A. Do not use the South African QSL Bureau! Charlie will be mostly mobile with 500 watts and antennas for the low bands and WARC bands. His operation will be CW only.

VK0, HEARD ISLAND DXPEDITION UPDATE. Carl Smith, N4AA, editor of QRZ DX, reported this week that on October 10th, a 20 ft. container containing gear and life support equipment for 20 people has left Oakland to be shipped Reunion Island, the departure point for this very large DXpedition. The team will assemble on Reunion Island during the last week of December. On January 3, 1997, they will leave board the 300 foot French vessel "Marion Dufresne" for a 10 day sail to Crozet and then to Heard Island. The stations will come on the air on or before January 15th, using the callsign VK0IR. The total budget for this DXpedition is $320,000.

XU, KAMPUCHEA (CAMBODIA). There was a report that JR1CSA and JA1SBH were active during the first part of the month (October 9-13th) as XU1U and XU1AO. Operations took place from the Battambong, in the north-west part of Cambodia, and the JA ops made 500 QSOs, mostly with Europe. QSLs should be sent to the individual operators.

XY, BURMA/MYANMAR. Another group has announced that an operation from Yangon (Rangoon) Myanmar (Burma) will take place from October 25th through November 4th, by the "JA1UT" DX Group. This will be the 4th demonstration /operation in the series linked to Visit Myanmar Year 1996. They had hoped to operate from Mandalay or Pagan on this occasion, but this was not possible, and the alternative of an operation in Yangon was accepted. Call signs to be used are XY1HT, XY1VMY, and XY1U. The group consists of mainly European and Japanese operators. Additional operators are welcome to contact 9M2/G3NOM.
On the first weekend, an entry will be made during this past weekend's CQWW SSB Contest. Also, a parallel operation will be made on Satellite during the contest weekend. The operation is taking place from the Headquarters of the Ministry of Hotels and Tourism. QSL to JA8RUZ.

Indeed. Excellent advice. The only two Morse exclusive sub-bands
in all of amateur radio are available to the Tech (50.0-50.1 MHz
and 144.0-144.1 MHz). Get on there and use Morse to your heart's
content, no code speed test needed, except the one you have to
pass on the air every time you operate (and frankly that's the
only one that should matter).

One of our techs is color blind. He resorts to the expedient of reading
component values with a meter. Considering some of the off-color colors
used in Japanese equipment, that's not a bad practice for those of us
who aren't color blind to use too. Just what value is that puce, lavender,
and mauve resistor anyway?

>I'm going to try some some tests with him shortly which will employ color
>filter gels to see if there is any benefit in that approach. If any of you
>similarly-affected folk out there have discovered reliable methods of color
>identification, I would appreciate your sharing your techniques with me so
>that I may work with my son to overcome this troubling obsticle.

Gels can help. Our tech adjusts color monitors with the aid of gels,
actually the gels are inside a device called a colorimeter, I use it too.
It's more accurate and repeatable than unaided vision, just adjust for
the same meter readings and all the monitors look the same. Not much use
for reading resistors though. A VOM is better for that.

What I'm getting at here is that I think your son will be better
served by ignoring color codes and using other means to identify
components. However, if you want to try gels, the two colors you
want are magenta (negative green) and cyan (negative red). These
two gels will make green or red respectively appear dark in
comparison to the other colors. With the pastel colors used as
color codes on many things today, however, they may not be very
reliable aids. I have excellent color vision, but I still have
to resort to a meter many times to positively determine a component
value.

>make or price bracket?

Those figures are respectable. What they are telling you is that for 20 db of quieting, a 3 kHz deviation signal needs to be 0.6 uV in the frequency range of interest. Amateur gear is usually specified at the 12 db quieting level instead, so sensitivity figures look better, but anything near half a microvolt is a good number for 20 db quieting.

With no signal, you get noise output from the receiver (open the squelch between stations and listen). When a signal is present, what matters is the ratio of recovered audio to recovered noise audio. This is called SNR (Signal to Noise Ratio). Due to the FM threshold effect, SNR will be better than the carrier to noise ratio (for AM, SSB, or CW, CNR = SNR, but that's not true for FM above the threshold, it will do better). So sensitivity figures for FM receivers are specified at a certain level of "quieting", IE even an unmodulated FM carrier will suppress the noise. This amount of quieting is measured in db. 20 db is considered "full quieting" in FM communications work, IE the noise remaining negligibly affects intelligibility (20 db means the noise is 100 times weaker than the signal).

Sensitivity is measured in terms of the signal voltage appearing across the input impedance of the receiver. Traditionally that's 50 ohms. So the specification is telling you that you need 0.6 microvolts of signal at the receiver input to achieve the 20 db quieting level. That's pretty good, the typical FM broadcast receiver needs 2 uV or more for the same performance. Amateur equipment will typically specify something on the order of 0.2 uV as the sensitivity figure, but that will be for 12 db quieting, not for 20 db (12 db means the noise is only 16 times less than the signal).

A very important specification is missing, however. That's the
third order intercept point. To a large degree, that determines
how much "crud", IE undesired mixing products from strong nearby
signals, that will contaminate your desired signal. Also, there
is no specification for image response. These two factors are
important, usually more important than sensitivity, in determining
if a receiver is suitable. Many scanners suffer badly in both
departments due to their necessarily wide frequency range, and
manufacturers are often reluctant to put hard numbers to these
performance aspects of their equipment. About the only realistic
test you can do is to take the candidate receiver to your local
intermod alley and see how bad it is.

>Listening to VHF/UHF transmissions, the audio quality is not high, not as
>good as commercial broadcast FM. Is this due to bandwidth? Using Xandi
>Electronics' miniature crystal-controlled transmitter (143.775MHz) to
>transmit conversation to the scanner, the end result is not as clear as
>it could be. Would a different transmitter/scanner combination give
>better clarity, or would a different technology be necessary for improved
>fidelity?

Broadcast FM uses 75 kHz deviation while communications equipment
uses only 5 kHz deviation. This means that audio frequencies higher
than 5 kHz will have a modulation index less than 1, and will be
rather noisy in the communications radio, IE they lose the benefit
of the FM threshold effect. Thus the audio section of the radio is
typically tailored to roll off response at about 3 kHz. With FM
broadcast, the modulation index will still be 5 for 15 kHz audio,
so high frequency response is considerably improved by the large
value of deviation.

A Grade A coverage area FM broadcast signal offers 40 to 60 db of
quieting (60 db means the audio signal will be a million times
stronger than the noise) while a communications channel is satisfied
with 20 db (signal audio only 100 times stronger than the noise).
Frequency response and SNR of broadcast signals will thus typically
be significantly better than communications FM. But the cost paid
for that is much higher power levels required for transmission,
much higher signal levels required for receive, and much greater
spectral bandwidth consumed.

In addition, communcations equipment has its audio response tailored
for best intelligibility, not for best fidelity. The audio frequency
response is typically 300 to 3,000 Hz instead of the 20 to 15,000 Hz
of FM broadcast, and communications receivers are typically specified
for a THD (Total Harmonic Distortion) of 10%, which is gross by HiFi
standards. This is a major difference in fidelity. And of course
dynamic range is constrained by the SNR to a lesser value for typical
communications radio signal levels compared to typical broadcast signal
levels. A scanner is not a HiFi.

Still, if signal levels are strong, and you rework the audio
sections of the communications radio for better fidelity, you

can get quite good results with NBFM.

>about we drop the code requirement for a typing requirement
>starting at 30 wpm up to 60 wpm for higher classes of licenses???
>Sounds as good as the other ideas presented around here!!

While that makes about as much sense as a Morse speed test, one
must ask, what's the point? Is there a documented problem with
slow typing?

Consider that most digital modes, other than RTTY, don't occupy
spectrum while waiting for the operator to input information,
and transmit at a fixed high speed when information is available.
Even RTTY allows type ahead so its 60 WPM transmission speed can
be fully utilized even by slow typists. So slow typing doesn't
adversely impact spectral usage the way slow Morse does. And even
"fast" Morse (20 WPM) still ties up spectrum longer than digital
methods in order to get the message through. If speed is the
criteria, then the digital methods win hands down, even for slow
typists. If speed isn't a criteria, then why speed tests of any
sort?

If you do feel that speed is a criteria, then why would you
have different test speeds for Morse and digital? Shouldn't
they be the same? The slowest digital method in common use
runs at 60 WPM *on the air*, shouldn't Morse users have to
equal that speed to get equivalent privileges? Remember,
they are both text transmission systems, the characters are
the same no matter how they are encoded.

I seem to recall, and this is just from memory of a deaf friend's
setup long ago, that the TDD service is Baudot, similar to HF RTTY,
45.45 baud. That may have changed now with the advent of the PC.

>
>Arthur Varanelli

Your "review" seems little more than ranting, arm waving, and not a little character assassination. If you have real technical critcisms of OET #65, you should state them, and document support for your technical position point by point.

The closest thing to real critcism you offer is that the OET #65 procedures are approximations which may not offer stations assurance that they are 100% within the exposure limits in every case. That is true, and the FCC acknowledges that it is true. But it is like saying that clean air regulations are no good because in some cases people still suffer respiratory distress while in a closed garage with a running auto.

The OET #65 procedures are intended to reduce RF exposures in the majority of cases without imposing excessive burdens on the licensee to comply. The alternative would be to require an exhaustive set of measurements on site at every radiating site by qualified experts using calibrated equipment, and repeat those measurements any time *anything* on or near the site is changed.

While that would give a higher degree of assurance of compliance, the FCC decided that it would be too burdensome on licensees to routinely require such on site testing. The Congress requires regulatory agencies to consider cost/benefit when crafting regulations. It would appear that the FCC has done so in this case in a number of ways. They have allowed use of the OET #65 approximations, they have categorically exempted some classes of radiators, they have allowed some low power stations to operate

when clearly they would be in violation of the exposure guidelines, etc.

Now you may think the FCC has been unwise in granting some of these exemptions, and I would tend to agree, but overall, following the FCC procedures should result in reduced exposures for most people near RF radiating sites compared to doing nothing. Therefore, I think the procedures are a reasonable step toward lessening population exposures to high RF fields.

No regulation is perfect, nor should it be expected to be. If necessary, further tightening of regulations can be done in the future. Specifically, I think the categorical exemptions are unwise, and think that topic should be revisited soon.

In particular, I think that users of handheld equipment which may expose them to RF fields in excess of the standards should be required to acknowledge that they are aware of the hazard and that they waive all right to make liability claims on anyone but themselves for any ill effects that may arise from operating the devices.

You critcize the regulations for making operators "second class citizens" by allowing them to be exposed to higher RF levels than non-operators. I disagree. The regulations allow operators to make an informed consent decision to voluntarily expose themselves to a higher level of RF in return for the perceived benefit that they receive from such operations. Taking personal responsibility for one's actions and exercise of freedom of choice, what novel concepts. Perhaps there is some hope for government after all.

>altavoz: No, a 50 ohm ant' feeding a 75ohm coax will
>cause a SWR into coax and towards the radio and an exact
>length of coax will not reduce the SWR except as
>attenuation factor over that length.

You two are talking about different things. Sure, the SWR on
the cable will not be unity, but if you cut the cable to an
electrical halfwave (or multiple), you *don't care* because
the impedance seen by the source is a repetition of the
impedance presented by the load. The source doesn't care
about SWR on the cable, it only cares that it sees the
correct impedance presented to it.

In the case of a 100 ohm load and a 50 ohm source, an electrical
1/4-wave of 75 ohm cable will transform the load impedance to
50 ohms at the source end of the cable. The source will be happy,
the load will be happy, and we'll be real happy there is SWR on
the cable, because it is this SWR which makes the transformation
happen. A "high" SWR isn't always bad, in fact it can be downright
useful at times.

Interested in elections in Romania?

If not, maybe you will find somethig interesting reading this letter. If the
answer is yes, proceed attentively.

Parliamentary and presidential elections are due in Romania on November, 3rd.
If you want to learn everything about these elections, without going all the
way to Romania, just let us know.

A serious, challenging dispute is in sight. You'd better not miss it.

MEDIAFAX is going to provide you, from October 31 to November 1st,
electoral information comprising:

UP TO THE ELECTION DAY:
- documentaries summing up the most important aspects of the last
four years' regime;
- the present political situation in Romania;
- the most relevant topics of the electoral campaign;
- pre-electoral polls;
- latest news;
- statements and profiles of the men in the news;
- reactions of foreign and domestic monitors.

YOU CAN'T MISS ANYTHING REALLY RELEVANT

And THE MOST IMPORTANT THING is still to come...

ELECTION DAY - 3 NOVEMBER

turnout
incidents
statements of the candidates
technical aspects

FIRST ESTIMATIONS

MEDIAFAX is the exclusive distributor of the exit polls conducted by the
prominent polling institute IMAS.
MEDIAFAX will run the first IMAS exit poll only minutes after the closing of the
polling centres.
The next day, in the morning of November 4, MEDIAFAX will provide IMAS
estimations based on parallel counting.
MEDIAFAX will also transmit the results of the estimation conducted by

the
governmental polling organisation IRSOP, as soon as they will be made
available.

FROM OCTOBER 5 TO 16
- final outcome
- politicians' statements
- negotiations in order to form the new government
- electoral campaign for the run-off of the presidential elections
- pre-electoral pools

RUN-OFF DAY FOR PRESIDENTIAL : 17 NOVEMBER

turnout
incidents
statements of the candidates
technical aspects

FIRST ESTIMATIONS

MEDIAFAX is the exclusive distributor of the exit polls conducted by the
prominent polling institute IMAS.
MEDIAFAX will run the first IMAS exit poll only minutes after the
closing of the
polling centres.
The next day, in the morning of November 4, MEDIAFAX will provide IMAS
estimations based on parallel counting.
MEDIAFAX will also transmit the results of the estimation conducted by
the
governmental polling organisation IRSOP, as soon as they will be made
available.
- final outcome
- politicians' statements

From October 31 to November 19, nothing relevant will happen in
Romania without you knowing it the first. And all this for only USD 49
(for
Central an Eastern customers) or USD 89 for the rest of the regions.
This package will by transmitted daily by e-mail.

Place your order:
- by fax: 40.1 - 222.40.34
- by e-mail to: sorel@mediafax.ro
The deadline for placing you order is October, 30.
By this date you are also invited to pay - by check or pay order
Our bank account: 40 200 44530
Banca Ion Tiriac Sucursala Municipiului Bucuresti

But who is MEDIAFAX ?

Look here the MEDIAFAX PROFILE

MEDIAFAX is a private owned news agency, having as main object collecting, processing and transmitting information.
=09
Set up in August 1991, as a part of MEDIAPRO holding, MEDIAFAX became a stock company starting February, 1st, 1995, with a social capital of
Lei 200 million Lei. The main stock holder is MEDIAPRO holding.
=09
MEDIAFAX is the most important news agency in Romania and the sole running promptly economic, legislative, financial and banking information, meaning specialised services aimed at business companies.
=09
MEDIAFAX has its headquarters in Bucharest, where it employs over 100 employees, as well as correspondents in the main 30 cities all over the
country.
=09
The agency has also special correspondents in Brussels, Budapest, London, Moscow, Paris, Sofia and Washington.
=09
MEDIAFAX issues currently 15 informational products: eleven on a daily basis, three on a weekly basis and one on a monthly basis. Part of them
are issued both in Romanian and in English. To those concerned MEDIAFAX offers a D-base under WINDOWS, containing over 5000 legislative norms still in force, adopted between 1924 and 1996.
=09
MEDIAFAX provides every day the main media (more then 100) and the most important business companies (more then 250) in Romania over 400 stories covering all the fields of the society, both Romanian and international: politics, economy, finance, social, culture, sports.

The transmission of the MEDIAFAX stories is made by fax, by modem, through data networks such as LOGIC, RTNS and INTERNET =09
(http://www.mediafax.ro).

Starting 1997 , MEDIAFAX will make available to public access a new D-base, one of the most attractive offers in Romanian in terms of dimensions
and informational content.

The D-base will have both up-to-date and historical information, offering over 200,000 stories published in the Romanian press between 1992-
1996, covering themes as political, social, economic, finance, banking information, mass privatisation, data on companies .

A bias for action, the balance, the equidistance, the professionalism, the quick reaction to domestic events, as well as a flexible and diversified
offer are the trade marks of the MEDIAFAX news agency.

According to our marketing studies, MEDIAFAX controls for the time
being over 60 per cent out of the information market in Romania.

Among the subscribers of MEDIAFAX news services range

news papers such as:
=09
Evenimentul Zilei, Adevarul, Cronica Romana, Ziua, Romania Libera,
Curierul National, Liberatea, Jurnalul National, Capital, Micro-Magazin
- Los
Angeles, Lumea Libera - New York

radio stations such as:
=09
BBC, Voice of America, Radio Free Europe, PRO FM, Uniplus, Delta

TV stations such as:
=09
PRO TV, TVR International, Antena 1, Amerom

news agency such as: REUTERS, A.P., NOVOSTI
The Economist Inteligence Unit (Romania)

and foundations, embassies, ministries
=09
Among the subscribers of our specialised business services range

banks such as:
=09
CITIBANK, ABN AMRO BANK, Soci=E9t=E9 G=E9n=E9rale, ING BANK,
National Bank of Romania, Frankfurt Bucharest Bank, BANCOREX, ION
TIRIAC, Comercial Bank of Romania, BUCHAREST Bank, CREDIT Bank,
Transilvania Bank, Columna Bank, Franco-Romanian Bank, RoBank.

business companies such as:
=09
Coopers&Lybrand, Ernst&Young, Price Waterhouse, Goldstar,
Autorom-Mercedes, HYDRO, Alcatel, Young & Roubicam, Stein & Partner,
Balkan Pack, Bull, Booz Allen & Hamilton, Coca Cola, Crown Agents, Dow
Europe, SAFI, Certinvest, Elvila Intl., Terra Intl., Rokura, FPP,=20
ASIROM,
ARDAF, Nissan, Soros Foundation, etc.

Sincerely yours,

Marketing & Sales Manager
Sorel Radu

Hello,
I bought the VC23 Vox headset for the FT50r and although the PTT works fine,
the VOX unit is inop.
I took it back to HRO and we tried it on another 50r and no luck. HRO
broke out 2 other VC23s and no luck with the VOX on either radio. The
good folks at HRO refunded my money and will check with Yaesu.
Anyone know anything about this?
(Otherwise the FT50r is a great little radio!)
Steve

5936. Indiana Hams Now Have A Choice Of Frequency Coordinators

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-27 00:00:00 UTC
From: "William C. (Bill) Wells" <WA8HSU@netusa1.net>
Message-ID: <3272CDD9.40D1@netusa1.net>
Source record: 214044
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The Amateur Radio licensees of the State of Indiana now have a choice of who they want to serve as the Frequency Coordinator for their Repeater and Auxiliary stations.

The Midwest Spectrum Management Alliance, Incorporated (MiSMA) was formed on July 30, 1996 to provide the radio amateurs of the State of Indiana with a frequency coordination organization that is truly benchmarked on current FCC Part 97 Rules & Regulations and that is truely representative of and responsive to the Amateurs of the State of Indiana.

In Part 97.3(a)21, the FCC-definition of a Frequency Coordinator, is stated as, "An entity, recognized in a local or regional area by amateur operators whose stations are eligible to be auxiliary or repeater stations, that recommends transmit/receive channels and associated operating and technical parameters for such stations in order to avoid or minimize potential interference."

THIS IS THE LAW!

Part 97.3(a)7 & 97.201 describes an auxiliary station. Part 97.3(a)37 & 97.205 describes a repeater station. A Frequency Coordinator's business concerns auxiliary & repeater stations by law...PERIOD! It can be safely and accurately inferred that a conscientious Frequency Coordinator (such as MiSMA) WILL RESPECT & PROTECT all other modes of operation, as specified in Part 97.305.

Currently, MiSMA has over 110 members, which comprises nearly 80 repeater/auxiliary station owner/operators. Since MiSMA's membership drive just began in early September and we have grown so much already, we must be doing something right. Each member has provided MiSMA with a signed affidavit-card which attests that MiSMA is their chosen/recognized Frequency Coordinator. Our "numbers" are growing at a rate of 10 -to- 15 new members per week...at present, MiSMA serves over 25% of all repeater/auxiliary stations in the State of Indiana, with that percentage rising proportionally as well! Since most members of MiSMA count themselves as FORMER members of the Indiana Repeater Council, MiSMA's membership now greatly exceeds that of the Indiana Repeater Council.

With all due respect, MiSMA was formed to serve the radio amateurs of the State of Indiana, providing up-to-date information, helpful technical operating parameters, timely performance, FARE AND EQUAL TREATMENT FOR ALL SYSTEM SPONSORS AND APPLICANTS etc...MiSMA exists because the FCC Rules & Regulations "says" that it can --- plainly -and-

simply.

UNTIL -AND- UNLESS THE FCC CHANGES OR MODIFIES TITLE 47 OF THE CODE OF FEDERAL REGULATIONS SECTION 97.3(a)21, MiSMA WILL CONTINUE TO FUNCTION AS YOUR FREQUENCY COORDINATOR (if YOU so choose)!

MiSMA has contacted all adjacent-State Frequency Coordinators. The ILLINOIS Frequency Coordinator has not returned any communications with MiSMA. MICHIGAN's database manager, WISCONSIN's Frequency Coordinator, OHIO's Repeater-Council Secretary, & the Chairman of the present Indiana Repeater Council have stated unequivocally that they "DO NOT RECOGNIZE MiSMA AS A FREQUENCY COORDINATOR".

MiSMA's response has been (essentially) "'We' do not require that 'you' recognize 'us'...the radio amateurs whom we serve provide the necessary recognition for MiSMA to function as a frequency coordinator, as per FCC Part 97.3(a)21. There is not one letter, particle of a letter, or punctuation mark in the "black letter law" or the "case law" of the United States which in any way makes such lack of recognission by these organizations meaningful or relivant. MiSMA will still provide 'you' with all information necessary to insure minimal interference when pending frequency coordination is the issue...whether 'you' choose to use the information in the spirit of cooperation or not."

MiSMA wants YOU to know that the ARRL Board of Directors -and- the newly-formed NATIONAL FREQUENCY COORDINATION COUNCIL (NFCC) are meeting this weekend (Oct 24-26) in an attempt to arbitrarily interfere with YOUR right of direct-redress with the FCC. The NATIONAL FREQUENCY COORDINATOR'S OFFICE (NFCO...the so-called Single Point of Contact -or- SPOC with the FCC) is attempting to come between YOU and the FCC. If you want to address the FCC directly, and if the ARRL & the NFCC are successful, YOU won't be able to "interface" directly with the FCC in the matters of repeaters, frequency coordination, and the like. YOU will have to address the NFCO (not YOUR government agency)!

DO YOU WANT IT THAT WAY???

Did YOU have the opportunity for input here??

Were YOU even aware that this "stuff" was going on??

If you have a "problem" with the possibilities of the SPoC, contact Mr. John Johnston, Mailto:jjohnsto@fcc.gov of the FCC's Wireless Telecommunications Bureau (202-418-0680) and tell him YOUR concerns, and what YOU think...MiSMA is going to express our concerns to him, make no mistake about it!

We invite you to check out our web site at http://www.interlink-2000.com/misma to learn more about MiSMA and these issues. We would also like to encourage discussion of all of these matters at news:rec.radio.amateur.policy and at news:rec.radio.amateur.misc .

The members of the MiSMA Board of Directors would also encourage one to one discussions at our Email addresses:
mailto:wzehner@skyenet.net Wayne Zehner - WA9INM
mailto:wb9shy@aol.com Steve Wilson - WB9SHY
mailto:enorris@netusa1.net Ed Norris - K9PSR
mailto:kk9t@aol.com Jim Fonte - KK9T
mailto:wa8hsu@netusa1.net Bill Wells - WA8HSU
mailto:kb9mt@aol.com Doug Neumann - KB9MT

MiSMA is a truely democratic organization. The first election will take place with two members of the Board of Directors facing election during 1997 and two members facing election in each year there after. Since these elections are by mail, the entire membership has an opportunity to participate in these elections. The election procedure is fully defined in our Bylaws which can be seen at our web site.

73, Bill Wells - WA8HSU

GG>>the contests? For other activities it's first come, first served.
GG>>Why should contesting be any different?
GG>
GG>Because the contest sanctioning body makes the rules?
GG>
GG>It is precisely because contesting is organized that it generates
GG>so much chaos on the bands. If each individual decided by himself
GG>when to contest, and under what rules to do so, there wouldn't be
GG>the band killing concentrations that organized contesting fosters.
GG>IE I might decide to work Sweepstakes on a Wednesday morning instead
GG>of a weekend if the contest sanctioning body didn't insist the
GG>contacts be made on the weekend, and another operator might decide
GG>Thursday afternoon was a good time for him. That's how other
GG>activities are done, but not contesting. Contesting is concentrated
GG>havoc whereas other activities are distributed more randomly and
GG>evenly. And that's a choice made by the contest sanctioning body.
GG>
GG>I don't have a good answer for what to do about contests.

GG>Cummulative contests have some features that make them better
GG>sharing partners because they spread activity over a greater time.
GG>OTOH, sprints limit the duration when the bands are unusable by
GG>others. Both have their pluses and minuses. Single band and/or
GG>single mode contests limit the problems for other bands and/or
GG>modes, but they totally wreck the band and/or mode of the day. OTOH,
GG>any band and any mode contests spread the load and aren't as
GG>disruptive to any particular other activity. Pluses and minuses
GG>again.
GG>Contesting is disruptive, and it is disruptive almost every weekend.
GG>Something should be done about that. I don't know exactly what, but
GG>some creative thought by the contest sanctioning bodies might come
GG>up with better solutions than what we have now. For example, and I
GG>don't know how practical this might be, the organizers could have
GG>a rule that no station participating in the contest could operate
GG>for more than 10 minutes out of every hour on a given mode or given
GG>band. Or they could say that contacts this hour only count with
GG>stations having the same first letter in the suffix of his call
GG>as yours, etc. Surely there is some way to dampen the peak loads
GG>so that the bands remain usable by others.
GG>
GG>Or, how about this? Lets have a new entry class for contests. This
GG>class is for stations who listen only and provide reports of
GG>stations transmitting over non-contest stations. Each report would
GG>be worth 1 point to the reporter, and would result in 10 points
GG>being subtracted from the score of the station reported. I bet we
GG>could get a lot of stations to participate in that, I might even be
GG>tempted to submit a log, and it might do wonders for the operating
GG>manners of contesters. Bet a lot of them would wind up with negative
GG>scores. :-)

>Regards, Merv
>
I've had a couple of requests for examples directly addressing the length
of coax question:

At 28 MHz an antenna with an impedance of 70R +4J fed with 11.597 feet of
RG213(1/2 wave length at 28 MHz) has an impedance at the input of 69.28R
+3.76J. Virtually identical to the load, but even a halfwave of cable
does have some transforming characteristics due to it's loses. TLA
computes the SWR at load as 1.41/1 and at the input as 1.40/1.

The same antenna fed with 5.798 feet of RG213 (1/4 wave length at 28MHz)
has an impedance at the load of 35.77R -2.35J. An obvious transformation
of the impedance, however, the SWR is still 1.41/1.

If you feed the antenna with 1/2 wave of PERFECT COAX,(NO LOSSES) TLA
computes the impedance at input as 70.02R + 3.79J (The difference between

this and 70R and 4J can be attributed to rounding.)

Regards, Merv

Channel 18 is actually 144-150 Mhz with video carrier at 145.25
and audio at 149.25. You should be able to hear the audio on your
22M radio and/or police scanners.
145.25 should also be heard as a buzzing noise.
In some areas, leakage *from* the cable wipes out 145.25 Mhz repeaters!

No, No. 'LENNIE AND SQUIGGIE' is (C) Troll (Steve, you're Personal Troll).

>I am flattered, in a way, that you appreciate my comments about you so
>much that you save them, but you really can't claim them as your own,
>just because they're ABOUT you ...

They are all yours, I don't claim them. About ME ? Someone needs to
teach you about singular and plural if they are about me......

>One last thing ... they do lose a bit when taken out of context like
>this ... perhaps the next time you feel the urge to regurgitate them,
>you'll include enough of the pro-code drivel that prompted them that
>they can be taken in context instead of in isolation ...

Oh, exuse me. I didn't realize that within the context of a discussion,
saying, for example, hams are "a bunch of semi-senile olde fartz sitting around
banging two pieces of brass together to make di di duh duh noises" meant
anything different within the context of that discussion than it did in
'isolation'. Are you trying to cover your tracks by saying that you are
justified in all you criticisms of ham radio because someone else said something
first that 'made you do it' ? That sounds like a great excuse. You type too
much to include everything, but I think a regular monthly 'Best of Squggie'
posting will be very beneficial to those people who just don't have the time to
read everything you write. Maybe if you get to see it all at once, it may even
calm you down a bit, who knows......

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and has been resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or soon-to-be Hams
that you know or share with them the URL to this site:

Illigeally access frequencies?? Umm.. it's illigeal to recieve 470MHz?
What country are you in? This is the USA bub. We can listen into the 2
GHz and higher, but not cellular or 46.63 - 47 MHz.

If you brought a VCR into a shop because the display was broke, and
then they guy fries the whole unit, but fixes the display, you gonna
be a bit pissed too, eh?
What's the difference, I pay him to desolder two jumpers, he breaks a
trace or two. hmm..

You do. You have a CW slice on 50mhz and another on 144mhz.

Not to mention that the fact you haven't passed a code test does not
mean you cannot operate code whereever you have operating privileges.

>DEBATE!!!

How does an examination that any "newcomer" can take, pass, and receive
privileges as a result "keep" people out? Seems that its a requirement,
you either do it or don't, and you either get the privs associated
with it or not.

"Filter" is a poor word, since nobody is forced to go through it if
they don't want to.

No, No. 'LENNIE AND SQUIGGIE' is (C) Troll (Steve, you're Personal Troll).

>I am flattered, in a way, that you appreciate my comments about you so
>much that you save them, but you really can't claim them as your own,
>just because they're ABOUT you ...

They are all yours, I don't claim them. About ME ? Someone needs to
teach you about singular and plural if they are about me......

>One last thing ... they do lose a bit when taken out of context like
>this ... perhaps the next time you feel the urge to regurgitate them,
>you'll include enough of the pro-code drivel that prompted them that
>they can be taken in context instead of in isolation ...

Oh, exuse me. I didn't realize that within the context of a discussion,
saying, for example, hams are "a bunch of semi-senile olde fartz sitting around
banging two pieces of brass together to make di di duh duh noises" meant
anything different within the context of that discussion than it did in
'isolation'. Are you trying to cover your tracks by saying that you are
justified in all you criticisms of ham radio because someone else said something
first that 'made you do it' ? That sounds like a great excuse. You type too
much to include everything, but I think a regular monthly 'Best of Squggie'
posting will be very beneficial to those people who just don't have the time to
read everything you write. Maybe if you get to see it all at once, it may even
calm you down a bit, who knows......

From: wmunsil@aztec.asu.edu (WILLIAM W MUNSIL)
Subject: CVI

Channel 18 is actually 144-150 Mhz with video carrier at 145.25
and audio at 149.25. You should be able to hear the audio on your
22M radio and/or police scanners.
145.25 should also be heard as a buzzing noise.
In some areas, leakage *from* the cable wipes out 145.25 Mhz repeaters!

GG>>Who shall decide the allowed percentage of the band to be used for
GG>>the contests? For other activities it's first come, first served.
GG>>Why should contesting be any different?
GG>
GG>Because the contest sanctioning body makes the rules?
GG>
GG>It is precisely because contesting is organized that it generates
GG>so much chaos on the bands. If each individual decided by himself
GG>when to contest, and under what rules to do so, there wouldn't be
GG>the band killing concentrations that organized contesting fosters.
GG>IE I might decide to work Sweepstakes on a Wednesday morning instead
GG>of a weekend if the contest sanctioning body didn't insist the
GG>contacts be made on the weekend, and another operator might decide
GG>Thursday afternoon was a good time for him. That's how other
GG>activities are done, but not contesting. Contesting is concentrated
GG>havoc whereas other activities are distributed more randomly and
GG>evenly. And that's a choice made by the contest sanctioning body.
GG>
GG>I don't have a good answer for what to do about contests.
GG>Cummulative contests have some features that make them better
GG>sharing partners because they spread activity over a greater time.
GG>OTOH, sprints limit the duration when the bands are unusable by
GG>others. Both have their pluses and minuses. Single band and/or
GG>single mode contests limit the problems for other bands and/or
GG>modes, but they totally wreck the band and/or mode of the day. OTOH,
GG>any band and any mode contests spread the load and aren't as
GG>disruptive to any particular other activity. Pluses and minuses

GG>again.
GG>Contesting is disruptive, and it is disruptive almost every weekend.
GG>Something should be done about that. I don't know exactly what, but
GG>some creative thought by the contest sanctioning bodies might come
GG>up with better solutions than what we have now. For example, and I
GG>don't know how practical this might be, the organizers could have
GG>a rule that no station participating in the contest could operate
GG>for more than 10 minutes out of every hour on a given mode or given
GG>band. Or they could say that contacts this hour only count with
GG>stations having the same first letter in the suffix of his call
GG>as yours, etc. Surely there is some way to dampen the peak loads
GG>so that the bands remain usable by others.
GG>
GG>Or, how about this? Lets have a new entry class for contests. This
GG>class is for stations who listen only and provide reports of
GG>stations transmitting over non-contest stations. Each report would
GG>be worth 1 point to the reporter, and would result in 10 points
GG>being subtracted from the score of the station reported. I bet we
GG>could get a lot of stations to participate in that, I might even be
GG>tempted to submit a log, and it might do wonders for the operating
GG>manners of contesters. Bet a lot of them would wind up with negative
GG>scores. :-)

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and has been resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or soon-to-be Hams
that you know or share with them the URL to this site:

5950. CASH FOR RADIO SUPPLIES

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-28 00:00:00 UTC
From: "Conrad R. Dery, Jr." <conradjr@bright.net>
Message-ID: <01bbc483$d2664c20$8c74d4cd@default>
Source record: 213908
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.b

Take a few minutes and read this. It could change your life!!!!

This is your chance to earn BIG BUCKS

This is for real....no gimmicks!!!

I read this article from a news group telling me I could make $50,000.00 in
as little as a month from an investment of only $5.
It sounds like a scam but it is legitimate. If you doubt it check out
Title 18 section 1302 of the U.S. Postal service and regulations.
It is --NOT--ILLEGAL--IT IS NOT A --CHAIN LETTER--IT IS TOTALLY
LEGITIMATE!!!!!!!!!
I decided that an investment of only $5.00, 5 envelopes and 5 first class
stamps was not going to break me even if I didn't receive any money back.
I can't guarantee that you will make money, who can, but the chances that
you won't are extremely small.

So here it is.........The procedure is simple

First.

Write your name and address on five separate sheets of paper.
Next write "Please add me to your mailing list" on each piece of paper.
Fold a ONE DOLLAR BILL in each piece of paper and mail one to each of the 5
following addresses:

---

1. ERIC FINCH, P.O. BOX 245 LUFKIN, TX 75901

2. KIP GRIFFIN, 349 W. WEBSTER, MUSKEGON, MI 49440

3. PETER SIMMONS, 668 CLAY #118, SAN FRANCISCO, CA 94111

4. JOE D'BELLA, 4611 TWISTED OAKS DRIVE #1916, RALEIGH, NC 27612

5. CONRAD DERY, 817 N. WASHINGTON ST., VAN WERT, OH 45891

Second

Remove the first name on the list and move the other four people up. For
example (5 becomes 4, 4 becomes 3,) etc....
Put your name and address as number 5
You can do this by re-typing this article or edit it and re-post it.

Third

Post your amended article to at least 200 news groups. This may seem like
a lot but it is easy to post to more than one at a time and there are over
17,000 different news groups so there is no shortage of space to post. The
more news groups the better your chances of being seen.

CONGRATULATIONS!!!!!!!!!!

You are now in the mail order investment business.
You will start to see results within 7 to 14 days
Remember, the more news groups you post to, the bigger your return will be.
You may want to get a post office box to handle all of your mail.
If you wish to remain anonymous you can use a pseudonym such as "The
Manager" or "The Investor", but be sure your address is correct!!!

How and Why the system works.

Out of every 200 postings you make you receive an average of 5 replies,
each with a dollar bill enclosed. Yes only 5, as an average.
It looks small at first but when you analyze it you see the beauty of your
investment.
With 200 postings you make $5.00 with your name at number 5
Each person who sent you $1.00 now makes at least 200 postings with your
name at number 4.
You have made $50.00
Your 50 new agents make 200 postings each with your name at number 3.
Now there have been a total of 10,000 postings. The average return is 500
at $1.00 each is $500.00
They make 200 postings each with your name at number 2.
Now there are 100,000 postings with your name on them.
Now expect 5,000 returns at $1.00 each...WOW $5,000.00
Finally 5,000 people make 200 postings with your name at number 1
You get a --$50,000-- return before your name drops off the list.
AND THATS IF EVERYONE ON THE LIST MAKES ONLY 200 POSTINGS!!!
Total possible income in one cycle = $55,555.00

From time to time, when your name drops off the list, you take the latest
posting that appears in a newsgroup and simply add your name and another $5
and your back in.

Remember 200 postings is only a guideline
The more you post, the more you receive

REVIEW

The cost to you--$5.00 + 5 stamps + 5 envelopes

There are millions of internet users and hundreds of thousands of new
customers every month which gives you millions of prospective agents.

17,000 + newsgroups to post your article to.

Read the instructions carefully and act fairly
That is the only way the system will work properly
Keep a list of everyone that sends you money and monitor the newsgroups to make sure everyone is being fair

Dear folks, Just a quick note to say that I only posted my note to a Drum Corps user group and Percussion user group...(Sounds logical?---it was a drumming event announced). I have no clue how my post could be posted to user groups that are------ irrelevent to my to my subject matter------ user groups for the most part that I have no personal interest in --and many groups that I didn't even know existed

I think somebody is somehow using my access or something. I find this whole mess very depressing. I would appogize, but honestly I have no clue as to how I could be responible for these multiple posts to sites that have no relevance to my topic.(none of these groups are in my address book) I do regret that so many people are upset, but I assure you that I AM NOT in any way knowingly resposnible. I do feel very depressed about this situation, and I hope you all can be compassionate about my predicament..

Sincerely
Chet Doboe

Carl, you really don't understand how HF works. Getting too many people on a given set of frequencies has repercussions throughout the world, because of ionospheric propagation. The U.S. has treaty obligations with other nations to supervise the radio spectrum in order to ensure the spectrum remains viable. The government has vested the FCC with the authority to do just that. If you won't recognize that fact, then there is no sense continuing to discuss it with you. I realize that you reject the role of the ARRL, but I didn't know you rejected the role of the FCC as well. You are in favor of HF anarchy, just as 11 meters (CB) became anarchy when the doors were opened to everyone and the rules went out the window. Get real.

>miles east/west. Any help or suggestions would be appreaciated.

I would suggest you take your cue from the folks who relay live
video from the field for a living, the TV ENG crews. Almost universally,
their first choice is a 2 GHz FM video link. A 10 watt transmitter
and a disc yagi with a 4 foot boom length, or a 2x3 foot offset feed
dish with switchable polarization sense, is the usual choice for
transmit, and a steerable 4-6 foot dish with switchable polarization
sense is the almost universal choice for reception. Range is typically
50 miles in favorable terrain.

A 30 to 50 foot pneumatic mast is typically used to get the transmit
antenna above local clutter, and includes a pan-tilt head to aim the
antenna. The receive sites are located on high points with good overlook
vantages to the desired coverage area. At least two receive sites are
usually necessary in urban terrain, oriented to align with East-West
and North-South streets. This allows you to shoot between buildings
in one direction or the other from most locations. A pan-tilt unit
and switchable polarization sense are musts at the receive site.

A major supplier of transmitters, receivers, and antennas is Microwave
Radio Corp. A supplier of remote control systems for receive sites
is Troll Technology. If you go all commercial, mast, antennas, radios,
and controller, you're looking at spending $15,000 or so to setup one
mobile unit and one receive site. Of course as amateurs we can seriously
cut some corners. Suitable FM video tx and rx kits are available for
a few hundred dollars, and we can make our own disc or loop yagi
antennas. The site controller can be a PC with a relay control board,
a modem, and a bit of amateur written software. The masts and pan-tilt
units still need to be purchased, however, and they aren't cheap. You'll
also need fixed microwave relay links back from the recieve sites to the
EOC transmission control center. These would typically use a higher

frequency microwave band, broadcast typically uses either the 6-7 GHz band or the 23 GHz band for fixed links. You can use the amateur 10 GHz band.

An experienced ENG crew can setup a live shot in a minute or two. They've learned their coverage area, know which receive site is most likely to service them, and are skilled in the use of bounce shots, knife edge defraction shots, and the like to clear obstacles between their location and a receive site. Close coordination is required between the ENG crew and their transmission engineer controlling the receive sites. That can be by 2-way radio, but more typically today it is via cellular phone. This is *not* a skill you can pick up in a few minutes. It takes months of in the field training to make a good ENG tech or transmission engineer.

UHF VSB transmission using linear polarization is generally unsuitable for this type of activity. There's too much multipath due to the necessarily limited antenna size on the remote vehicle, and too much power is required to overcome losses using VSB compared to the advantage offered by the FM threshold effect. FM capture, and the careful use of switched polarization senses, LHCP, RHCP, and H (V polarization is usually worthless), allows ghost free pictures and a broadcast quality 42 db SNR in almost all cases on 2 GHz. With UHF VSB, that's rarely the case.

If you don't need full motion broadcast quality pictures, there is another alternative. Use a pair of 56 kb RF modems and link PCs at the site and the EOC. Then use one of the video conferencing packages designed for use over the internet. We've had good luck using the 56 kb RF modems mobile on the 222 MHz band. Ten watts transmit from an omni-vertical on the mobile and a good high receive site should handle your entire coverage area (you can link the receive site back to the EOC via an ISDN line if necessary, or setup a 56 kb duplex repeater at the high site). This is a much cheaper approach, manpower requirements and training are much less, and picture quality is acceptable for damage assessment purposes.

>So my premise is that for amateur radio to really grow and not die,
>it must, as a hobby, have functional communication capabilities that
>are SUPERIOR to what Hobbyist/Commercial Services currently use.

The problem with your scenarios is that computers != amateur radio.
Amateur radio is about communications. Computer systems are not.
Amateur radio is not going to replace the Internet. Never will.
If that is your goal, you might as well give it up now, 'cuz it is
never going to happen.

>This was the drawing card that started it all and its the one that is
>lacking now. Without it, we are pushing a covered wagon along a freeway
>and the traffic is going to run us over. We can only keep what we have
>if we invest in things better than what we own.

50 years ago radio was technology. HF communications was "hi-tech".
Today, it is passe. Computers have replaced the HF communication rigs
of 50 years ago.

(*****
The following is a QST

Congress puts part of a ham band up for sale, the FCC says goodbye to a lot of rules and an FM repeater is now on the air from space. Find out where it is on Newsline report number 1002 coming your way right now.

(*****
CONGRESS DIRECTS FCC TO SELL PART OF 2.3 GHZ BAND

Part of a ham band is being put up for auction to the highest bidder and the United States Congress is sponsoring the sale.

For what may be the first time in history, the U.S. Congress has ordered that specific radio frequencies be re-allocated. This includes 5 MHZ that Amateur Radio shares with government services between 2305 and 2310 MHZ. During its final hours before adjourning, members of the 104th Congress

approved a provision as part of a larger appropriations bill.
That provision directs the FCC to take 30 MHZ of spectrum from the 2.3-GHz region and sell it to the highest bidder. This, to help balance the budget. Back in May of 1994, the National Telecommunications and Information Administration identified the amateur segments 2300-2310 MHZ and 2390-2400 MHZ for reallocation.
But this latest move by Congress comes as a big surprise, nonetheless. That's because of what happened last year when hams scored a major victory by getting primary allocations on the 2390-2400 MHZ and 2402-2417 MHZ subbands. While many assumed that the government would now leave the entire band alone, Capitol Hill lawmakers proved them wrong. The recent congressional action reallocates 2305 to 2320 MHZ and 2345 to 2360 MHZ to wireless services that are consistent with international agreement concerning spectrum allocations.
The action was included in the massive, 2000 page Omnibus Consolidated Appropriations Act, which Congress passed and President Clinton signed. The act is now Public Law 104-208 it's only a matter of time before the FCC tells hams to leave.
The big question on everyones lips. Is this an isolated action by congress or a precursor of things to come.

(*****
MORE HF BANDS

Will there be more ham bands in the future for ham radio? Possibly, according to ARRL President Rod Stafford, KB6ZV. In answer to a question posted at the Leagues recent Southwestern Division Convention in Mesa Arizona, Stafford said that with the move of many communications services to new communications technology in the UHF and microwave spectrum that more frequencies in the high frequency range could become available in the future. Stafford stressed that nothing is concrete and that the ARRL is not now actively pursuing new low band allocations, but that an eye is being kept on the situation to see what happens as we approach the next century.

(*****
ARRL BoD MEETING

By the way. The ARRL Board of Directors is holding its third annual meeting of 1996 as this newscast goes to air. We will have a complete wrap-up on that gathering, next week.

(*****
UNIVERSAL RECIPROCAL HAM LICENSE

A universal reciprocal ham license, good in 32 nations worldwide, is now under serious consideration by the FCC. The agency has issued a Notice of Proposed Rule Making with the intent of permitting hams from numerous foreign countries to operate their stations while on short visits to the United States.

If approved, the new policy will codify two pending international reciprocal operating agreements that have been under consideration for several years. Hams from about two dozen European nations and ten Central and South American countries would be included in the agreement.

(*****
BROADCAST STATION FINED

The FCC has fined WVIC FM of East Lansing Michigan $8000 for using forbidden language on the air. The penalty was imposed after the FCC received complaints made by on-air callers to a live talk show aired by the station on June 3rd.

According to an FCC release, the language broadcast by the station contained patently offensive terms. Such language is banned from the airwaves from 6 AM to 10 PM. This is the first fine issued to a broadcaster since 1994 for violating the governments indecent language rule. The station is expected to file an appeal.

(*****
COMMISSION ELIMINATES INTERNAL REGULATIONS

The FCC has announced that it has eliminated more than two-thirds of all internal management directives and revised a number of others. According to an October 7th release, the streamlining of the remaining regulations has made it possible for FCC employees to receive faster, more efficient support services, while saving much of the agencys' resources.

(*****
TUCKER ELECTRONICS BOWS OUT OF HAM RADIO BUSINESS

The consolidation continues in the world of ham radio retailing with yet another major player leaving the arena. Tucker Electronics has closed its Dallas, Texas, ham radio retail outlet and mail-order business and sold its inventory to Ham Radio Outlet. The move puts about 15 people out of work, according to Tucker's executive vice president and CEO John Holloran Jr.

Ham Radio Outlet also acquired the assets of the Oklahoma Comm Center, which Tucker acquired in July. Plans call for the consolidation of Tucker's retail and mail-order operations at HRO's New Hampshire store where Tucker's toll-free order number will be answered for now. Ham Radio Outlet will also continue to market the Tucker brand of accessories.

Tucker's Holloran says that the move will allow his company to concentrate on its core business, distributing new and reconditioned electronic test and measurement equipment.

(*****
NEW KENWOOD FTP SITE

On a brighter note, Kenwood Communications has announced the addition of an extensive FTP site that includes many service bulletins and product application notes dating back to 1975. The company says that it receives over 100,000 hits to its website every year and expects the new service to be of great help to its customers and service providers.

The address of the Kenwood home page is:

http://www.kenwood.net

The ftp site is:

ftp://ftp.kenwood.net

(*****
ARRL ON LINE

The American Radio Relay League is dropping two of its on-line accounts due to a noticeable decline in use by League members. Effective November the 1st, the ARRL will no longer be active on either GEnie or Prodigy.

Pointers to other sites still offering League services, such as ARRL Web, InfoServer, CompuServe and America Online will be posted on both Prodigy and GEnie before the ARRL disappears from these services. These pointers will include instructions on how to subscribe directly to W1AW bulletins.

For those not aware, it appears as if America Online's Ham Radio Club BBS is fast becoming the hottest spot for mainline ham radio discussions. Compuserve still remains the favorite of those involved in the high tech aspect of our hobby.

(*****
NEWSLINE HOME PAGE

Speaking of on-line services, a quick reminder that Newsline maintains a major presence in the America Online Ham Radio Club.

We also have a new home page created by Dale Cary, WD0AKO that contains the weekly scripts, profiles on Newsline personnel, information on the Young Ham of the Year Award program and other interesting topics. The Universal Resource Locator to reach the Newsline home page on the World Wide Web from your computer is:

http://rrnet.com/rrra/newsline.html

(*****
SAFEX ON THE AIR

SAFEX 2, the German built ham radio FM repeater in space is now fully operational. SAFEX, which is a German acronym for the Space Amateur Funk Experiment, is operating from aboard the Russian MIR Space Station Complex.

The test configuration has been powered on since July 12, 1996. The first hardware tests involved only the stations digital speech recorder. During that phase of operation, pre-recorded messages from the MIR crew were copied by many ground stations on 437.925 MHZ. The messages were received with hand- held radios.

Joerg Hahn, DL3LUM, the SAFEX International Coordinator, reports that the F-M repeater section was brought on line for testing back on July 19th. There, a short contact was achieved by Matt Bordelon, KC5BTL, operating as

W5RRR with one of the cosmonauts. The first open use of the repeater to establish a ground to ground QSO was performed between DF0VR, IV3WLQ, and LY3BH. Dave Larsen, N6JLH, performed the first ground-to-ground QSO in North America with Scott Avery, WA6LIE.

SAFEX II is a project of the German Amateur Radio Club, and managed by the Ham Radio Group, DF0VR, at the German Aerospace Research Establishment. The project is supported by DARC, DLR, NPO Energia and Russian radio amateurs.

More about operating through the SAFEX 2 ham radio repeater in space can be found on the AMSAT bulletin board and other sites on the world wide web.

(*****
SAREX QSL CARD STATUS

If you are still waiting for a QSL card for a contact that you made during the STS-78 SAREX mission, here is an update.

Frank Bauer, KA3HDO, that at this point, the STS-78 QSL cards have not yet been distributed. It usually takes about six months to develop the QSL art work, get it approved by the astronauts, print them up, and send them out.

(*****
SMOOTH SAILING FOR SEDSAT

Some good news on the experimental SEDSAT satellite project. Dennis Wingo, KD4ETA, the project manager reports that as of Sunday September 22 the SEDSAT satellite has passed a very crucial and important milestone. They have the software tasking up and running and have successfully connected over the Mode L transponder.

(*****
SAT-MED DEMO

Technologies for the emerging practice of tele-medicine have been demonstrated to doctors in Africa. This, in conjunction with a recent International Telecommunications Conference in Geneva. The ITU says it held the demonstration to assist the African Regional Telecommunications Conference held in Abidjan. One demonstration used an Inmarsat type B satellite to transmit audio and video of a medical procedure. Another demonstration transmitted medical data through an Inmarsat type M bird to a mobile satellite terminal.

(*****
GB2RS BROADCAST TIMES CHANGE

From the United Kingdom, word that the 40 meter GB2RS news broadcast on 7047.5 kHz, which is widely heard over Western Europe, moved to a new time of 10:00 AM on the 29th of September.

This broadcast is from the station of Jimmy Porter, GI3GGY in Londonderry, Northern Ireland. Also from Londonderry, the 2 meter GB2RS

broadcast at 10:00 AM on channel S-21 from the station of June Dunne, GI4MJD, moved to 9.00 a-m on the same date.

(*****
FCC EXPANDS TOLL FREE PHONE SERVICE

Closer to home, the FCC says that residents of 26 states now can reach the FCC's National Call Center by simply dialing 1-888-CALL-FCC.

Arizona, Washington DC, Iowa, Maryland, Massachusetts, Missouri, New Hampshire, Oregon, Rhode Island, Texas and Washington state are the latest to join the growing list as the Commission phases in the toll-free information service geographically. States added to the system earlier this year include Delaware, Florida, Georgia, Illinois, Kansas, Maine, Michigan, Minnesota, Montana, Nebraska, Oklahoma, South Carolina, Vermont, Virginia and Wyoming.

Plans call for the service to be available nationwide by early 1997. The Call Center, located in Gettysburg, Pennsylvania, operates between 8 AM and 5:30 PM Eastern Time.

(*****
DX OPERATIONS

In DX news, WB2DND will once again be active from the United Arab Emirates from November 3rd to the 8th from A61AD's QTH. He will be on all bands including 160 meters. Don has reportedly shipped a 1000 feet of wire to put up an inverted L and beverage aimed at Europe and North America.

SM0BFJ, reports that Gus, 5X1D, in Uganda is active every day between 1730-1800z on 50.150 MHZ. He also says that Gus is the first station ever to be active from Uganda on 6 meters. QSL 5X1D via SM0BFJ.

(*****
ARGENTINA BEACON

LU9AUY, reports having a part-time beacon using his call sign active on 28.197 MHZ. The beacon system uses a Kenwood TS-870 at 10 watts out into a 3 element Cushcraft Yagi antenna. LU9AUY says that he normally leaves the beam pointed at Europe though he sometimes points it toward the Caribbean or the USA. The beacon is active on his weekday afternoons.

QLF

Just about every ham knows that the Q-Signal known as QLF is an indicator of a rather poor Morse code operator. If another ham tells you to QLF he is actually telling you that you sound as if you are sending CW with your left foot. But not this time. Charlie Kotterman KA8OQF has this report that will make you think twice when you hear the term QLF:

Last summer while visiting relatives in Arizona I attended the local premier of the John Travolta film Phenomenon. You may have heard my report about the critical plot twist involving ham radio. And what appeared to be an inside joke with Forrest Whittikers character using the call WB6QLF.

As all us cw ops know, the signal QLF is the request for a less than precise operator to send with his left foot. Imagine my surprise, when after a little digging I discovered that WB6QLF is a real person, who worked closely with his then next door neighbor who wrote the script for Phenomenon. The writers name is Gerald Tapago:

"I knew nothing about ham radio operation, but luckily I had a neighbor who was very versed in it, so he helped me. I immediately called Charley and said, This is what I want to do in the story. How would it work. And he helped by explaining it to me. And then I sent him a draft of the script before I sent it out to anyone. So he could kind of check out that area of the script. I asked Charley if in the script I could go ahead and uses his actual callsign. And he said yes. Disney had to have him sign things so he could waive that. And so that is the one inside thing I know about that. It is an actual callsign and Charley was nice enough to let me use his callsign." Tapago

The ham who helped all this come about says that all the attention he has gotten has come as a complete surprise. By his own admission, he is a bit publicity shy. But he did consent to answer the big question on my mind.

Chuck Roblin, WB6QLF, are you a real person?

"Yea, I just wanted to say that, this is on the level. And the screen writer Gerald Tapago, is a very good friend of mine. I'm the for real WB6QLF." WB6QLF

As it turns out, the fictional character is one of the years top movies does have a real life counterpart, and one that all of us can be proud of.

5959. Hallicrafters FPM-200 Owners Directory

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-28 00:00:00 UTC
From: Jim Garland W8ZR <4CX250B@miavx1.muohio.edu>
Message-ID: <3274D3FB.4594@miavx1.muohio.edu>
Source record: 213917
Cross-posted to: rec.radio.amateur.equipment,rec.,radio.amateur.,homebrew,rec.radio.amateur.misc

I'm trying to put together a directory of all Hallicrafters FPM-200 owners, and woujld appreciate your letting me know if you own one, or know of somebody who does. I believe there are probably not more than a couple of dozen in existence.

For those of you who may not be familiar with the rig, the FPM-200 is perhaps the rarest and most unusual ham transceiver ever built. Built in 1959, it is no relation to the FPM-300, which followed it fifteen years later. The FPM-200 was all solid state (germanium bipolar transistors), except for the finals (6146s) and driver, covered 80m-10m with 100 watts of ssb,am and cw, had twin PTOs with linear 1KHz readout, no tuning, used glass-epoxy circuit boards and mil-spec construction, switching power supply, and was smaller than a typical speaker cabinet. It sold for about $2600 in 1959 dollars -- about the same price as a brand new KWS-1 and 75A-4. Technologically, the FPM-200 was at least a decade ahead of its time. The rig was marketed heavily in 1960 but never really made it to full production. My best guess is that about 25 were made, but nobody seems to know for sure.

If you know anything about the history of this rig, have any brochures, etc., please let me know. If you own one, I'd like to collect some or all of the following information:

1. Serial Number (if any --some apparently didn't have one):

2. Accessories available: (It was supplied with a.c. pwr supply/speaker, mobile mount, chrome lock for mount), two manuals.

3. Condition: (cosmetic and operational, any modifications)

4. Known history of your FPM-200 (previous owners, etc.)

5. name, phone number, address, email address, call sign of owner.

I'll obviously make the information I receive available to all.

Thanks,

Jim W8ZR

This must obviously be a mis-print. According to His Most Omniscent,
Carl, everyone in existance wants our HF bands. That's why we must
flood them with millions of codeless HF licensees -- to "protect"
them.

> TUCKER ELECTRONICS BOWS OUT OF HAM RADIO BUSINESS
...
> Tucker's Holloran says that the move will allow his company to
>concentrate on its core business, distributing new and reconditioned
>electronic test and measurement equipment.

More than likely its due to the fact that hams are notoriously cheap,
and wouldn't pay Tucker's outrageous prices on their gear. Luckily
there are enough stupid people in private industry to purchase their
reconditioned equipment from Tucker at over-inflated prices.

[I still laugh every time I remember seeing the old z-80 CPM machine
for sale in a tucker catalog about 2 years ago, selling for "only"
$895. BASIC Interpreter sold separately!]

Source record: 213921

Yeah! What he said, If its the wave of the future why is there so little of it on the bands. Face it, the Anti-codes will just be on voice communications modes if they ever get on HF anyway. That's where the fun is and the most of the hams are. The only time digital modes are worthwhile is when you have a cold and a sore throat!If they are so much fun, how come Carl (THE Anti-code) spends all his time posting on the internet instead of having fun on digital modes, packet, or what have you? Ham radio likely will die out with the current interest in computers, internet, and cell phones for communications for the masses but not for many more years. We allways have been more of a "cult" group than something for the masses. But if it dies out, then who will miss it? Very few were interested in it anyway so it could'nt support itself or justify its existence. Hell, we'll likely be dead by then anyway!Bottom line is that the anti-codes want to get more hf priviledges without picking up the code...welfare hf hams..too lazy or stubborn to learn it, and would rather beat their brains out trying to find a way around it than just learn it. Anti-codes would certainly have more impact if they had their general license and were promoting digital modes by using them and talking about them. At least those people would not be viewed as just trying to skate the code thing.

5964. Re: The final debate on CW.

Burt,
Thanks for the short and eloquent listing of why CW is important.
I agree with you and all of the other proponents of the necessity and
importance of CW.
I still feel that the testing requirement of CW speeds faster than the
internationally set number is inappropriate. Having a CW speed of 13
wpm or 20 wpm is no more meaningful than setting a minimum talking speed
or even a minimum typing speed for the packet folks.
If a high speed CWer wants to only "talk" with a fast CW "talker", so be
it. A HAM on the phones has the same option of communicating only with
fast talkers.
Let's not use code speed as a filter in achieving higher level licenses.
Regards and --... ...--,
Bill KO6SI

Probably because he is only allowed to use CW and SSB on HF. How
'bout allowing novices and tech+'s to use digital modes on their
HF CW bands? IF I can use digital modes in the novice CW portions,
then why can't they? It just doesn't make any sense at all.

Wrong O buddy boy.

An electrical 1/2 of coax is a tried and true method of mesuring
the SWR at the antenna feed point remotely for exactly that reason.
Its totally invisible to the remote test gear. If you doubt it try it!

I know a lot of people who love to play golf, but they can't join the country club because MONEY is keeping them out.

I know a lot of people who are very interested in owning their own home, but the bank won't give them a loan, so the BANK is keeping them out.

I agree with you Squiggie, that's NOT FAIR !! We need to fix not only ham radio, but the WHOLE DAMN WORLD !! We need a NEW system, where everybody has the same as everybody else, where NOBODY gets ANYTHING that everyone else can't get. EVERYBODY should get a ham license. Period. And for those hams who can't afford to buy an Icom 781, the damn GOVERNMENT should be forced to give them one !!

Let's see, what should we call it ? How about COMMUNISM, or maybe WELFARE ?

You should start that new organization you keep telling us about Squiggie, call it the ACWRL - Amateur Communist Welfare Radio League. You could be the Dictator, or the El Presidente, or whatever you want to call it.

73, Jim KH2D

P.S. Grandpa Lenny, if you read this, spare us the disertation on the history of Communism and the price structure of the Communist magazines you subscribe to. Thanks.

altavoz: You're assuming a choke . The thread makes more sense
if you dont assume a choke (i went all the way back to JOEL
GAMBLEs post)

I think he's saying a 440 signal into RG58 is a 1:1 NO MATTER
WHAT cause it's 100 feet long and that means it could be an
open circuit . I think he tried to get one past us by making
us assume that there was a termination .
Anyway the way to kill it is BALUN,steel wool, ferrite,
cut coax to a particular length (narrow BW), or offset feed
the antenna (bal ant has an unbal' point where you can hook
coax, and pattern does not suffer).
What i find amasing is so many novices worry about the
match , but not the radiation pattern . You can match
anything, even a 1/2w by stretching it a little to bring
down the R and that 2nd lobe is too small to hurt .
Radiation pattern on a J pole is bad but has a nice
stub to match it....so build a 5/8w using that stub to match
it. Problem is the standard way ("L")is just as simple.
Thanks for correcting my sloppy thinking, 73's

>Where are all these modern communication modes in amateur radio?

Now there's a good question. As Carl notes, the majority of current amateurs appear to studiously ignore modern communications methods. According to the ARRL survey, only about 22% of current amateurs engage in modern communications techniques at all, and most of that is on a very primitive level.

>Where is all the commercial gear supporting these modes?

SCS, PacComm, AEA, Kantronics, HAL, TAPR, etc make gear for the amateur market. Harris, Marconi, and many others make it for the commercial and military market. Check out the milspec for ALE systems and the STAANG modem to get an idea of what HF operation is like outside amateur radio.

>Where are all the QST home-brew articles showing amateurs how to
>build all this whiz-bang super-techno equipment?

QST? Homebrew super-techno? Surely you jest. QST ceased being a technical journal about 30 years ago. For modern communications techniques, you need to look elsewhere. Until its demise, Ham Radio occasionally had good articles (a PSK modem for example), and early issues of Communications Quarterly had good articles (a coherent weak signal modem design used by the Lowfers for example). The AMRAD Newsletter has good articles (mostly SS). The Pactor Journal has good articles. The TAPR and AMSAT proceedings volumes have good articles and projects.

And of course there are the professional publications. *They* haven't stood still and let grass grow under their feet for the past 50 years. NASA Tech Briefs had a good I/Q receiver design article recently, and an article on Turbo decoding. EDN often

has a useful circuit, and of course there are the IEEE pubs.

And then there are books. Tom McDermott has a new book on wireless digital communications that looks like it's going to be a must read. Stephen Wilson's Digital Modulation and Coding is, of course, a classic, with a clear and lucid presentation that any amateur with a smattering of background should be able to understand. And Modern Signals and Systems by Kwakernaak and Sivan chapter 10 is a must read. Everyone should probably slog through Digital Communications Techniques, Signal Design and Detection by Simon, Hinedi, and Lindsey. The prose is turgid, but the information is comprehensive, covering everything from OOK to M-ary modulations. For something a touch more exotic, Wavelets and Subband Coding by Vetterli and Kovacevic is worth a look. Down market quite a bit are Packet, Speed, More Speed, and Applications from ARRL, and The Spread Spectrum Sourcebook, also from ARRL. The techniques presented are primitive, but can serve as a simplified introduction to some of the ideas involved.

But most of the information on modern amateur technique is found on the Web. TAPR's DSP and HF SIGs have good info. Karn has Fano and Viterbi encoders and decoders on his page, as well as Reed Solomon block encoders and decoders. The Slovenian hamradio pages have complete schematics and board layouts for the 1.2 Mb transceiver they're using in their national network. Motorola, TI, and Analog Devices have appnotes that directly apply to amateur radio. Etc. You just have to browse to find information for cutting edge amateur projects. It's out there. Maybe in 30 more years, some of it will find its way into QST. Nah, probably not, it doesn't beep.

> absolutely worthless for emergency use. You all claim to be such a big
> help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't contribute
> anything to disaster relief any more.

Your right. Disaster relief went out when solid commercial
communications was offered to agencies that respond. Just the little
people like police and fire. During the Northridge earthquake here in
L.A. some time ago, cell phone was online during the entire time. It
was also 100% reliable. What did I hear on Ham radio? "It was a
vertical motion, felt here in xxxx." Then they started to rag chew
about past earthquakes rather than assisting people in need. Ham
radio was worthless as a emergency service. Why could we not use ham
radio to get assistance? The fire dept was busy answering the cell
phone calls!

Just this weekend I heard someone in need of CHP while on a remote
highway. When this person asked for help, it was denied. The person
was told to use a different repeater. Again, for that person ham
radio was worthless.

> All you do is whine and moan about how much a piece od commercial
> equipment costs. Well that isn't entirely true. You do go to hamfests
> and whine and moan to vendors about how much their equipment costs as
> well. You idiots have absolutely no idea what goes into the design
> production and marketing of any piece of gear, commercial or not. I
> truely feel sorry for any poor bastard that relies on making a living
>from you cheap SOB's.

The ham radio community as a whole has lost it's old time electronics
guru's. There is no longer a understanding about how equipment works
and why things need to be built like they are. This is a direct
result of testing, and the type of people that are attracted to ham

radio. The users truly do not understand, they are for the most part clueless.

Our quality suffers in ham radio. So what to do about it. Ok, we all know what the problems are. How do we go about fixing them is the question at hand. How do we improve our quality? In my view it has everything to do with testing, and the ARRL's failed attempt to gain users (license holders). Even has something to do with commerical vendors pushing technology beyond what it really needs to be.

Improve testing. Learn what the theroy is behind the questions. We can do this by getting rid of the study materials that focus only on the questions. The 500 question pool should be kept away from the public, almost secret in a way. Not released until testing would be a better way. That would force users to study everything rather than just the questions and answers. This should bring a deeper understanding on what ham radio is all about. As license grade increeses so will the difficulty of the questions. Code should be required for every class of license. What this would mean is you would really want to become a ham, and it would keep the lazy away.

more later....

I was hoping someone out there could tell me what the contacts on the bottom of the Kenwood battery packs for the TH79a were for. I know that it's for the rapid charger, and I know that one is obviously positive and the other is negative. Is the third for a thermistor for battery temp when charging? I want to make a rapid charger for the battery, and needed some info on this. Thanks in advance for any responses.

Skipped population demographics in school, did you Jim?
When the average age of a population group is increasing
at 3/4 year per year, that group is dying. It means that
younger people aren't entering the group at a rate which
would sustain it. A demographically stable group has the
same average age year after year.

>>everbody! Our networks are SPARSE!!!! Can ya believe it!!??

Well, Kevin's post never reached this site, so I'll reply here.
I don't think any change in the regulations would make squirrels
and rabbits take up SS networking, Kevin. When I say sparse,
I mean sparse. 90% of the US is still open land. Only in a
few megalopolises are amateur densities sufficient for anything
but a sparse network. If you ignore that, then a national
network will forever be beyond our grasp.

Currently, only about 1 person in 2,143 in the US is an amateur
with digital aspirations. So even in the congested rat warrens
of the metroplex the network is still sparse. With changes in
licensing regulations and changes in operating regulations, we
may double or quadruple the number of amateurs who would operate
amateur digital networks, but to go much further than that isn't
probable at all unless we throw amateur radio open as a Part 15-like
consumer service. And if we do that, you can bet we'd lose our
right to experiment. There just aren't that many people out there
aching to experiment with wireless digital networks.

>Boys, boys, behave now!!!

Hush, Carl.

>rather than waiting for new, more reasonable rules to begin to do
>anything.

Yeah, we can do interesting and useful things now. We don't have to
wait for rules changes, badly needed though they are. Results speak
much louder than retoric. In Slovenia, they have a 1.2 Mb network
built. Why don't we? Our rules don't stop us, we have more money
and manpower at our disposal, but we're still plodding along at
1200 baud while a little eastern European country is eating our
lunch. Why is that? Why can't we even get 56 kb deployed outside
of a few pockets around the country? That damn equipment has been
available for 8 years now. It doesn't take a rocket scientist to
install it. And it is perfectly legal under current rules.

>Kevin, having not spent as much time as Gary in trying to field networks
>(Gary's been in the trenches for years) I don't think you've had the
>same opportunity to experince the same frustrations and deal with the
>same day-to-day bullshit and logistical problems and so forth ...

Logistics, ah now there's the magic word. I don't think Kevin has
any idea what it takes to put together and operate a large network.
It doesn't "just happen". Networking is inherently a cooperative
enterprise. It takes organization to pull off. Getting even two
amateurs to agree on anything is difficult, getting a large network
of amateurs to cooperate is a monumental task.

>I don't think Gary will accuse me of puttting words into his mouth if I

>number of ways to exploit this ...

Indeed, and several of them are ideally suited to amateur SS network operations. The primary problem with SS from an amateur perspective is its LPI. That makes clock synchronization difficult, requires relatively long acquisition times, and in general makes interoperability difficult for a multi-station network. The solution to that is to have a narrowband master clock station transmitting on the LAN to keep everyone synced with the sequence in use.

>>I guess you have no experience with syncing up on the
>>receive side via a corallator circuit. With DSSS
>>this happens in well under a second. This is because

>
>There are other ways to deal with the synchronization and separation
>issues ... again, perhaps not as elegant as other ideas we can envision
>under more liberal rules, but still quite doable TODAY ...

Actually, because synchronization is maintained at all times with the master clock station approach, aggregate network throughput can be much better with everyone on the same sequence. That's because acquisition time is zero and access is fully deterministic. This allows network management to be, uh manageable.

>******
>
>I strongly suggest that you both (Gary and Kevin) take notice of who our
>REAL enemies are and save the debates about whose ideas are most
>elegant, etc. until after we've won the MAJOR battles ... OK??? ...

No. I consider our "enemies" for the most part irrelevant. Their point of view is destined to die out one way or another. My only concern is whether there will still be an amateur radio by the time their view does die out. I think it is better to forge ahead with our own agenda without bothering to try to convert the Luddites. That's a lost cause anyway. Their minds are closed. Those we need to seek to convert are those who still retain an open mind, and who are open to having new ideas introduced to them.

Your style of personal attack does us no good, Carl. It doesn't change the minds of the Luddites, and alienates many of those we still have a chance to persuade. Take the high road and stick to the technical issues. Correct the Luddites' misstatements of fact as they arise, but don't bother to engage them in extended and fruitless arguments. It's a waste of time, and wins us no points.

>We need you both ... and all of the lurkers who were beginning to
>mentally take sides between Gary's "do it now" argument and Kevin's "but
>there are more elegant ways" argument ... to pull together and try to
>acat as one body, so that we can win the war and accomplish the
>following primary objectives which are necessary to the future survival
>of ham radio:

You flatter yourself, and us, by assuming there is a large body of lurkers still reading these threads. What interest there may have been has been dissipated by the personal bickering between mainly you and your Luddite tormenters. I hate to pick pick pick at you, but if you are going to be in this for the long pull, you've got to develop a thicker skin and learn to ignore the mindless little yip dogs attempting to nip at your heels.

>1) removal of all code testing from U.S. licensing requirements
> (includes any/all necessary ITU Treaty changes or exceptions)

I think this is a matter of equity and rationality, Morse speed testing is a relic of another era, but I don't consider its removal essential to the future survival of amateur radio in toto. What is essential is to break the attitude that it is Morse Code speed which defines an amateur. That is damaging. The testing requirement itself is only an archaic nuisance and not a serious barrier, it is the code forever attitude of many in the current amateur community that is dangerous to the future of the service.

>2) restructure licensing system to 2 levels (entry and regular)

This is more important. The biggest damage to amateur radio has been done by Incentive (to pass faster Morse speed tests) Licensing. That system must be dismantled and replaced by a system relevant to government's legitimate concerns. Those concerns apply equally to every amateur, so consequently every amateur needs to fully meet those concerns before being allowed to operate at all. I can see a limited place for an entry license, but it should be sharply limited in privileges (I would suggest a very low power limit would be the appropriate limitation of privileges, say 1 watt max).

>3) modernize technical regs WRT bandwidth, coding/spreading, modulation,
> content, digital signatures, unattended/automated messaging systems,
> etc.

Yes this reform is needed. Lyle Johnson said at DCC 96 that most of Part 97 could be fit on the back of a 3 by 5 card if amateur radio were rationalized toward its primary goals and not maintained as a way for warehousing spectrum for the vested interests of current licensees. Basically, a qualified licensee should be told, "These are the amateur bands, stay within the edges, have a nice day."

>I think a 4th objective is probably of necessity:
>4) break the stranglehold that the ARRL has on US ham radio regulation

I disagree completely. We need a strong national voice to deal with
the government. The only change I would make is in the organization's
orientation. The ARRL today is controlled by the contesters and Dxers,
but they, like us, are a minority of amateurs. Since only about 25%
of US amateurs are currently ARRL members, and many of them are really
only QST subscribers rather than active participating members, we can
change the direction of the ARRL simply by having enough activists join
and work for a change in leadership direction. And the number of activists
required isn't that large. How many new members have you signed up
lately?

Note too that the national organization has to represent all interests,
not just those of the digital networker. The Dxers still need someone
to count cards, and the contesters need someone to print certificates.
And the public service types need someone to look out for them, etc.
You can't expect to have everything your own way, but it would be nice
to occasionally have *something* go your way.

The ham population cannot just continue to get older. A population which is ageing at basically the same rate as the passage of time will eventually die out, because we all die. So will amateur radio unless the average age of the amateurs stabilises.

As to whether age brings intelligence, that seems questionable after reading some of the things that get posted ;-)

It would only age 4 years in 4 years if (1) there are no new hams, or the the age of the hams is getting one year older every year. Either way, the hobby is ultimately doomed.

Look at it this way. In 40 years, the average age of amateurs would have increased by 30 years. If the average of amateurs is now 50, what will the average amateur be in 60 years - dead.

If any activity (not just amateur radio) is to survive long term, then the average age of the people involved in it must either be stable, or changing with the average of the general population.

Mark.

Subject: Hams and Emergency Services

Thus sayeth Burt:

> Most of your repeaters are all closed and are
> absolutely worthless for emergency use. You all claim to be such a
>big help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't
>contribute anything to disaster relief any more.

Interesting viewpoit Burt... I wonder how you manage to reconcile this opinion with the following:

<begin forwared message>

FEMA to FCC: No Sharing of 2 Meters and 70 CM

The Federal Emergency Management Agency better known as FEMA is saying no to sharing or reallocating the 2 meters and 70 centimeter ham bands to Low Earth Orbiting Satellites. In a letter to the FCC task force currently evaluating new spectrum for use by LEO satellites, FEMA Manager Paul
Reed, tells the committee that his agency opposes any such change.

Reed says that Amateur Radio operators have a history of supporting state and local government emergency operations by providing needed

communications. He says that many local communities served by ham radio have extremely limited resources and would be without any form of back-up communications without Amateur Radio.

Reed says that FEMA has been in contact with its state and local emergency management partners across the nation. That it is their belief that authorizing access to the mobile satellite service in the 2 meter and 70 centimeter bands will seriously degrade the ability of these groups to
support their public service requirements.

The FEMA Manager ends his letter by strongly urging the FCC task force to remove both of these ham bands from any further consideration as a new home for Low Earth Orbiting Satellites. He says to leave them for use by ham radio and its emergency service partners, nationwide.

-Amateur Radio Newsline

National Weather Service and Ham Radio

If you're a ham interested in using your skills and equipment during emergencies, you may get a request for help from the federal government. The National Weather Service wants to make more use of hams.

Amateur radio communications was one of the topics at a mid-September Weather Service Conference in Salt Lake City, Utah. Among those invited to speak was Newsline's David Black, KB4KCH.

These are times of big changes for the National Weather Service. The agency is undergoing what's called modernization. Some offices are closing, while others assume more responsibility. Offices which used to issue weather warnings for roughly a dozen counties may have to cover more than twice that number under the new plans.

At Salt Lake City, meteorologists from eight western states discuss establishing and strengthening amateur radio communications networks. Paul Flatt, KC7OVO, is a Weather Service warning coordination meteorologist.

"In Tucson, Arizona, we started the year with about 40 ham radio operators as Skywarn spotters. I think we are up to 75 or 80 at this point in time. I would like to see that grow higher, to put an upper number on
it, I couldn't really do that. To cover the area so the entire portion of where I'm at, southeastern Arizona, has some ham radio operators somewhere nearby." KC7OVO

The Conference addresses issues including how to establish spotter groups, frequencies and resources available, and the various types of emergency communications groups including RACES and the Amateur Radio Emergency Service. Rich Douglas is the Conference organizer.

"We could do a lot more and hope to do a lot more and are trying to plan to do a lot more with amateur radio. I would say three or four years ago

we did not take advantage of this wonderful opportunity. Now we are trying to organize ham radio networks. Working with our offices, each of the 24
offices, for about two or three years most of our offices have installed radio equipment. Our Regional Director, Dr Tom Byer supports this program. Ans he not only says he does, he does with his budget. He makes sacrifices in his budget to make sure we start gettin' some equipment." Douglas

Concern is expressed over the ability of hams to provide emergency communications services if their frequencies are invaded by commercial users. Several meteorologists say they will write letters opposing possible allocations to a commercial satellite service said to be considering the 2 meter and 440 MHZ amateur bands.

Conference attendees learn about amateur equipment and radio systems, packet and amateur televison. Even with Doppler radar and other high tech equipment, hams are needed to help confirm conditions forecasters often
suspect but have no proof exist. Again, Rich Douglas:

"First of all, they're very dedicated people. We have found they are among the most reliable group that we can count on. And of course the advantage of instant communications by way of a radio." Douglas

The Weather Service continues to install amateur radio equipment in various offices, as the agency moves ahead with plans to make more use of ham radio in serving the public.

Skywarn storm spotting isn't the only amateur service that forecasters learned about during the Conference. Attention also focused on using ham radio for backup communications when normal circuits fail. That's exactly what happened in early September when Hurricane Fran knocked out phone
lines to Weather Service offices in North Carolina.

-Amateur Radio Newsline

<end forwarded message>

Apparently both FEMA and the NWS disagree with you Burt. They'd like to see even more participation by hams. Here in the Houston area the EOC, the local NWS office, and the Red Cross are all calling for more assistance from hams, not less. One can only hope that the next disaster to strike Cape Cod will help you see a glimpse of reality.

>PEOPLE OUT ... and those prople are ALL people who are otherwise
>interested in ham radio, but not in the code ... that is grossly unfair
>and needs to be rectified to fit with today's world.

Many times people have to do things which appear to be irrelevant.
When I wanted to drive a car, I had to take a 15-hour driving class.
I learned such exciting things as hand signals. But, I still had to
take the class.

Just this weekend I had to suffer through a 10-hour Hunter Safety
Class to get my hunting license. Despite being a Certified NRA
Pistol/Rifle/Shotgun instructor, I had to sit through the class.
99% of it was firearm safety that I use on a daily basis. But, I
still had to do it.

What is "relevant" to you, Carl, is not necessary relevant to the
rest of the amateur population, and vice versa. CW continues to be
a highly-used mode on HF. It is still used by numerous foreign
amateur stations for communication. To promote international
goodwill, one must be proficient in CW to work these foreign ops.
Thus, the test is relevant in that respect.

Unfortunately, our testing system in imprecise. We grant globs of operating privs for passing small, condensed tests. In an ideal world, if you want to work SSB you should be tested on SSB only and receive SSB privs only if you pass. This is the "mode-based testing" I have endorsed numerous times again and again. Unfortunately, as radically opposed to CW as you are, there are others equally-opposed to a mode-based testing scheme.

>You also omit Conn's blatherings about how it "is government's
>obligation to limit access to HF so all the would-be American hams don't
>trash the bands for foreigners" ... why do you choose to omit some of
>the more blatantly absurd parts of Conn's blatherings and attempt to
>defend the less obviously absurd parts (when taken in isolation, they
>may be less obviously absurd, that is)???

They were irrelevant to the point at hand I was making.

There is some truth to Conn's statement. Many foreign stations (indeed, the local club I am Vice President of has foreign operators as members) view american stations as uncooth and unsophisticated. They look down on Americans in the same light you look down on contesters.

Now, back to Conn's statement. First, I must digress for a moment...

In any "civilized" society, there are set rules for societal interaction. [By rules I don't necessarily mean rules & regs that the FCC is setting, just standards by which we conduct ourselves with one another.] This is applicable in amateur radio as well.

Normally, as an infant you observe the behaviour of your parents and siblings to draw a basis for how you should act. As you mature that group from which you draw upon expands.

In Amateur Radio, we had a similar mechanism in place. It was known as the Elmering process. New hams would have elmers that would work with them to help them get their first license and get on the air. The elmer was a crucial part of the new ham's "societal development", because the elmer helped provide the new ham with guidelines for interaction with others.

As we've seen over the past decade, the "decade of greed / decade of self-indulgance" in the 80's gave us a generation of people who are into "instant gratification". Their focus is "me", and "I want it now". [Being a product of the 80's during which I spent my early adulthood, I too suffer from the same mindset to some degree, I must admit.]

Amateur radio responded in several ways. Primarily we made it easier for them to get ham licenses by creating the VE system, creating the codeless license, and now the electronic filing system for licenses. None of these advancements in of themselves are evil, but they merely create an environment which fosters potential problems.

Today's amateur has no elmer. He picks up a book at Radio Shack, takes the codeless tech test a few weeks later, and in a couple of

days has his license via the Internet. Now he's on the air, with absolutely no guidance or "elmer" to help him/her to adapt to the amateur radio world.

When this happens in the animal world (parents dying off before the children are fully developed emotionally) you end up with a bunch of unruly, unkempt adults. They had no basis for behavioural guidence.

I don't think that you will disagree that HF is a different animal than VHF. The rules are somewhat different for that societal interaction. Now, if you unleash 170,000 codeless techs on HF without giving them the proper guidence, then yes, you will have effectively unleashed what appears to be 170,000 unruly amateurs onto HF.

That, I feel, is a legitimate concern for people who use HF. It is especially important because unleashing people on HF might have an increased negative impact on our stature in the eyes of other nations. As such, the eventual implementation of codeless HF access must be done so tactfully to prevent these types of problems from occuring.

Thus, Conn's statement has some merit.

Jim is correct. You must also realize that CW is workable on ANY ham
band! With a reasonable setup on VHF/UHF you can work stations for 50
miles around (more or less of course). Of course you can beg/borrow/steal
(theft is *not* recommended) a receiver and copy W1AW and a host of other
stations without transmitting at all. Sending code is much easier than
receiving, so practice receiving! Good luck, Al WQ0J

From: eplatt@wco.com (Evan Platt)
Subject: TDD codes

I did that a long time ago.. You have to set at 300 baud, and 7-E-1,
if I recall correctly.. You might even need 110 baud. But from what I
remember, the TDD had to answer, and they had to hit the space bar a
few times, to 'connect'. And it only worked on a crappy modem, so I
don't think it will work on newer modems, unless someone has developed
a software.
Remember: A modem has to CONNECT, via a result code or 'handshaking'.
TDD's just start talking. Plus, TDD's only 'talk' when they type. Call
a TDD, you can tell how slow someone types: "beeeep" (pause) beeep
beeep beep (pause), where a modem is constant noise.

Good luck, let me know wheat happens.

Subject: The final debate on CW.

WHAT IS C W

* It is a unique,intimate,concise and effective communications skill still
employed throughout the world.

* It is the most efficient mode in terms of power required for long-distance communication ,least susecptible to interference,and conserving of
the radio frequency spectrum.

* It involves no accent or pronunciation problems,therefore providing a widely understood international language.

* It employs simpler,more reliable and easily maintained equipment than any
other communications mode.

* It is an equalizer,negating age,speech impediments and dialectical differences;it provides for ready acceptance of youngsters in an adult enviornment.

* It is the ONLY radio communications mode that is understood readily by both man and machine.

>
>Wonder why everyone ignores the limitation of the speed of digital modes:
>The typing speed of the operator who initiates a message?

The reason people ignore this limitation is that it isn't a
limitation. In particular, a message can be composed "off-line",
i.e., not transmitting while the message is being composed. When
it is ready for transmission, the message can be sent rapidly, using
little time on the radio spectrum. Then, the message can be
automatically forwarded to the correct destination. Automatic
fowarding allows the technology to work around things like QRM
and poor band conditions. See, the limitation isn't how
fast one can type (or someone else can read) - the limitation
is how efficiently traffic can be passed, and that's a factor
you seem keen to ignore.

>RTTY has been around since the war years yet it never came into the
>forefront of amateur comms. Maybe most folks aren't all that interested
>in greater "spewput."

Note that we're not only talking about "keyboard-keyboard" communications
like RTTY and some packet. We're talking about technology to Relay
information over Radio - as in American *Radio Relay* League. Keep
in mind, if you think the answer is ridiculous, perhaps you don't
understand the question. It appears you'd be better off spending
your energy _understanding_ what modern digital communications is
and where it is going before you start _criticizing_ it.

Dave,
I agree totally, on the air is the best way to get code speed up. But
with the existing program, all a no code tech needs to get access to the
HF novice bands is a 5 wpm code certificate. And Morse code really isn't
something you can learn by trial and error, so if you don't have the basics,
5 wpm, what is there to practice ?

No, Clint, those are NOT silly answers.
Contrary to popular, more liberal beliefs, there are, in fact, many people (like myself) who are on extremely limited incomes.
The 'dues' charged by the ARRL are by far the highest I have seen, and having to live on a sub-poverty level fixed disability income doesn't allow the wasting of that much for (in all honesty) little more than a magazine I read maybe twice a year. That's why I dropped them. They were overpriced, and not truly representative of my viewpoints. Not to mention, the two times I did ask them for basic information, all they could be bother to do was sell me a book or two which 'might have the answer I was looking for.'
No thanks. My money is MUCH better spent on a basic Internet package, like the one I have. No frills, Web, FTP, e-mail. and unlimited time for under $10 a month.
Yes. it adds up to 4 times the cost of the ARRL magazine subscription fee, but I get many times that in return.
Any additional return gotten from the ARRL are solely subject to the whims of the board (with a large dose of commercial marketing thrown in for good measure), not the membership anyhow. As a result, I put in my time with a local group that returns time to the communities surrounding it at the direction of its members, not the board and officers.

Sigh. A calculator is a rudimentary computer too. So what?

If your point is that anything that involves a computer is somehow
makes it "computer related", you're mistaken. People don't care that
a computer controls fuel-injection on their car, unless it fries and
they have to pay several hundred dollars.

The amateur radio hobby is not the computer hobby, which is what
the other poster alikened it to.

I think you guys have a point about the newbies on the amateur bands and
the wierd stuff that goes on, but I think that lots of these "CBers" you
hear on 2m are much more valuable, and far less detrimental, to our

hobby than the "fully qualified" idiots you hear on 75m, all the way across the band, every night of the year. These are the wonderful good 'ol boys who look down on not only new people, but new ideas, people of other races, you name it. Neither we as hams, nor the world, needs these people.

It is very tempting to hold code out as a rite of passage, because a) we did it the hard way ourselves, and b) we don't want crowded bands. But this hobby will die without two things 1)technical advancement 2) sufficient numbers and the resulting lobbying power to keep some spectrum available. I don't see how anyone in their right mind can deny that. To do so is to be selfish, understanding that the external forces acting on our hobby will cause some movement, but "who cares, I'll be dead anyway".

Technical advancement will not happen as a result of people having great CW proficiency, rather, if any standards are toughened, they should be technical in nature. I franky don't see a good rational reason to do that. I like barriers just like the next guy so I can hurdle them and then revel in how great I am compared to everyone else. But let's think a little bit about what the hobby really needs and perhaps create or eliminate them as we see fit, using a rational basis for our decision.

I agree 110%, David.
The garbage going on 2m now around urban areas is horrific.
The good old 'Break Break' has started to make an appearance around
Chicago on 2m (and I'm not talking for emergency traffic, either -
more's the pity). I'd be willing to bet that in another year or so 11m
and 2m will sound identical.

As for the code, and people like Carl - your childish attitude of crying
and whining to the government to give you something you have neither
earned nor deserve without earning has grown very thin.
It's gotten to the point where every pompous whiny lazy little butthead
who wants something they don't have the integrity, brains or intestinal
fortitude to work for feels they 'deserve' everything they see - at
other peoples expense.

Sorry for the diatribe, but these lazy little morons are really starting
to get my goat.

>does not have the relevance you speak of.

Not true at all.

>If it was that relevant,
>then amateurs would be required to maintain that skill and use it.

Not using a skill does not make it any less relevant. For people who
do not want to interact with the numerous foreign ops in the lower
25kc, they don't have to partake in 20wpm code.

>Saying that is still used by numerous stations has little bearing on

Experimenting with new modes presents problems even today.

Yes, there is some additional overhead. We maintain a higher number of
examinations than we have today.

Unfortunately it doesn't teach you anything or make sure you know anything about various modes of operation, which are part-in-parcel with band characteristics. A mode-based testing scheme can address that.

>I have yet to see what guidance a morse code test in a classroom (receive >only in the US, I believe) does to provide social guidance on using HF.

You either missed or didn't read the first half of my statement. Code in of itself doesn't provide this guidence, its the elmering process that one would go through when learning code with one's elmer. The lack of code hasn't killed the hobby, its been the death of the elmering process being replaced for "instant gratification".

Of course, this entire thread ignores the fact that, because of the baby boom bulge, the world population, and the U.S. population in particular, is aging. This is not news, but it is affecting all kinds of trends -- such as crime rates coming down because most crimes are committed by young males. So the fact that the ham population is aging should not be particularly alarming unless it exceeds by a significant margin the aging curve of the population as a whole.

There is no requirement for amateurs to keep up Morse expertise, and even less of a requirement for them to use Morse. Therefore, the test does not have the relevance you speak of. If it was that relevant, then amateurs would be required to maintain that skill and use it.

Saying that is still used by numerous stations has little bearing on whether it should be a licence requirement. Many modes are used by amateurs in other countries, but there is no suggestion that using them increases international goodwill. Surely using a communication mode that the others use, no matter what it is, is what increases goodwill. There is no inherent goodwill in any mode. Goodwill (or badwill) comes from the interaction of people.

On a lighter note, if the story about the "Babel fish" in "Hitchhiker's Guide to the Galaxy" has any validity, then perhaps Morse does more for international goodwill ;-)

This has some merits, in that it relates the access given by the exam to the content of the exam. It has two problems, as I see it. First is the extra administrative overhead and the second is what do you do when someone wants to experiment with a new mode which has no current test?

Personally, I like this concept or a "band-based testing" concept where the characteristics of the band are examined to give access to a band. Thus amateurs wanting to use HF would need to know the basics of the band such as propagation characteristics, etc. This, to me, would be a more suitable type of testing to give full access to the HF bands as it would

demonstrate specific knowledge of the band.

I have yet to see what guidance a morse code test in a classroom (receive only in the US, I believe) does to provide social guidance on using HF. There is no reference in the Morse exam to HF operating manners as I know it. I'd suggest that an exam on general operating manners (for everyone) would be more useful. For HF, a suitable test for HF access would be selecting and using HF frequencies - a test specifically relating to using the HF bands.

5999. US License Examination Opportunities Scheduled 10/29/96 to 1/27/97

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-29 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <32767266.43E8@arrl.org>
Source record: 213868

This page was last revised October 29, 1996

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****
VANITY CALL SIGNS - SUBMITTING YOUR APPLICATION VIA THE WORLD WIDE WEB

Vanity Call Signs can also be applied for, in the appropriate eligibility Gate, at the appropriate time, by using the following URL:

http://www.fcc.gov/wtb/amradsrv.html

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license,

a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class license.

****

LOST LICENSES

If you have lost your license, you can obtain a duplicate by writing to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you. You may fax your request to FCC at 717-337-1541.

****

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. See the back of a current FCC Form 610 for details.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 860-594-0300 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "vec@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

6000. FT-900 Noise Blanker

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-29 00:00:00 UTC
From: God@Provide.Net
Message-ID: <555joo$fqp@news.provide.net>

The noise blanker on my FT-900CAT has little if any effect on line noise at my QTH. Anyone have a mod that works? I would rather see what someeone else has done before I tear into a new $1300 rig.

thanks guys, Brett

Subject: KF2OQ's jamming of 3901

Some info about Little Jordan...Enrolled at Indiana State University at the school of business. In his second year of post-graduate work studying for an MBA. Listed as John Jacob Moser,could he be using someone elses call?Very possible. Feel free to call 812-876-3328,thats little jordans phone number. Feel free to submit petitions to the ARRL and to file a complaint with U.S. attorney's office. He is running a Henry 8KD, which puts out about 5000 watts. Lets stop this little snotnose bastard before he becomes another NR5T (turd) Best Wishes from the Net Digger! HoHOHOHOOOOOOOOO!!!!!

>Where can I get FAQ's etc.?

You listed both "ham" and "shortwave"...

If you want to *just* listen, to hams, to international broadcast stations (like the BBC, Voice of America, Voice of Russia-- formerly Radio Moscow, Radio Netherlands, etc.) you don't need a license. Good info on this part of the radio hobby can be found on rec.radio.shortwave and in its FAQ.

If you want to TRANSMIT, a license is required. From your address, I assume you're in Canada. The American Radio Relay League's web site may be able to answer some questions, but the licensing procedures are different in Canada. I'm not sure if the Canadian Radio Relay League (and if I remember correctly, it is called that) has a web site, but you might try a search for it.

There is also an organization called the Ontario DX Association that is for both "hams" and "shortwave listeners". I don't have their address at hand, but you might ask at a local radio store. If you can't get it, e-mail me back, and I'll dig it out for you. I'm about 99% sure that they *don't* have a web site, because I searched for it recently.

The problem is that you're making the assumption that a correlation
exists between the codeless licence, and behavior on the bands.
Unfortunately, that's not valid.

For the past few nights I've been listening to 80M SSB. I
heard operators call each other "asshole", intentionally interfere
with a Spanish QSO in progress because they didn't want any "spics"
on *THEIR* frequency, not to mention the numerous references to
this or that "bitch." Do I need to get into the extra-class op
who was counseling a new General that he didn't need to use
a counterpoise (or, as he put it, "Them wires hangin' off'n the
bottom) on his new vertical? Is *THAT* the level of expertise
that we're looking to strive for? Or to be the well-rounded
personality evinced by another op who proudly declared that he had
read only *2* books in his entire life, even when in school. All of
this in _15_ minutes of random listening.

Quite honestly, I used to suffer under the delusion that HF operators
were supposed to be a higher class of operator. Until, of course, I
built an 80M receiver and actually listened to the trash. I spend most
of my time using CW on HF, but, quite frankly, I'm getting quite tired
of the RST/WX/QTH QSO's. When I attempt to bring up a new
subject, my questions are usually ignored, or the other op's XYL
suddenly needs them, urgently.

On the VHF+ bands, on the other hand, I can *always* find someone
who wants to talk intelligently about construction, a new digital mode
to try out, or even, *gasp*, something other than radio and the
traffic conditions on the expressway.

Is it any wonder that new operators question why they have to play
second fiddle to the OM who seem to require the vast majority of our
HF allocations to swear, complain, and play childish games of

one-upmanship?

I'm about to get my license and my 1st radio. I drive about 60 miles a day just to work and back! I am on a low budget (I only have about $500-$600 for the time being after I get the HT). I won't be able to buy things that often, maybe at an average of $50 per month.

I'm going to get a good Yaseu or Kentwood Handie Talkie that does 3-5 watts. Do they all work on repeaters? Can I use them with autopathes?

I realize that repeaters are to be shared. I do not have a car phone and figured I could start my own autopatch (no repeater). Can I do this with a Techinican license? I have figured a way to build a device that would read a long password composed of many DTMF tones (about 10-15). Could I setup a transceiver with an autopatch (maybe homemade) at my house on MY phone line and use it well in my car? Would it make sense to buy a 35 watt amplifier for my car so I could plug my HT in? How far to HT transmit in the general city areas?

Can I put a tone based password on my autopatch (as above) LEGALLY? Do I have to worry about other hams Hacking it or will they leave it alone? Do I have to make it identify itself every 10 minutes? Could I setup an answering machine like device at home so my family could receive messages from me?

Thank You.
73!

We can listen to cordless phones. You just can't use anything
heard on there for personal uses/gains. There may be state
regs. to prevent cordless listening but not federal.

> on a given set of frequencies has repercussions throughout the world,
> because of ionospheric propagation.

The only problem with this thinking is that there is not a shred of evidence to support the view that the ITU, the FCC, Industry Canada, or any other spectrum management agency has every decided at what point there are too many amateurs. Conn continually points this out, but has not one iota that limiting the number of amateurs is a policy of any of the above mentioned agencies. Attempts at amateur spectrum conservancy was attempted after World War II by the FCC. But it was a failure because there were no quotas nor was any other administration that issued amateur licences prepared to co-operate in a similar manner.

Point in fact is that there are no such policies, so Conn's opinion on this point is not creditable.

>The U.S. has treaty obligations with
> other nations to supervise the radio spectrum in order to ensure the
> spectrum remains viable. The government has vested the FCC with the
> authority to do just that.

But there is nothing in those treaties which demand that the FCC undertake to limit the number of amateurs to communicate on the HF bands. In fact, like many other administrations, the FCC manages the amateur spectrum only to the extent that they operate within there frequency allocations. Spectrum occupancy, in so far as the amateur service is concerned, is a real yawner for them.

> If you won't recognize that fact, then there

> anarchy when the doors were opened to everyone and the rules went out the
> window. Get real.

So, we are to understand the because CBers didn't learn Morse code, anarchy will result once Morse code is abandoned for operation on the HF bands. Get real indeed. I suppose that the anarchy on the CB band, if it could be called as such, had nothing to do with the fadishness, the lack of enforcement or the lack of any testing, let alone the relative ease of acquisition of this equipment.

Besides, a bit of anarchy might do a lot of good because it would force amateurs to consider investigating better more efficient modes of communications, rather having to depend on Morse code testing as a measure of comfort for radiotelephone operation.

73 and live better digitally

OK, if you say so. Well, how about this for an idea, Squigg. How many hams are there in the U.S., 700,000 ? How's about we all kick in a thousand bucks each, what would that be, about $70,000,000.00 ? And then we buy the ham bands. I'm not sure who we give the money to, because you say EVERYBODY owns them already and I imagine 'we' are part of 'everybody', right ? Never mind, we'll figure that out later.

Anyway, after we buy the ham bands, we drop the CW requirement, just like everybody says they did in Japan. After we do that, millions of people with EE degrees and Grandpa Lenny will come and get a ham license like you said already, right ? OK. So now we just do like they do in Japan and we charge everybody a hundred bucks a year for their license. And to top if off, we could make even MORE money, like they do in Japan, by charging all the FOREIGN guys who have U.S. licenses MORE money than we charge the locals.

Think about it Squiggie, if we could pull that off, we could not only get you and Grandpa Lenny on HF, we could all get RICH !!

But we need to get going on this quickly, because the FCC may just start thinking about how much money they could make by charging us Japanese prices for a ham license, and we don't want them to get the jump on us.

I have an offshore bank account in the Carribean, Squiggie, we can use that to hold the money until we are ready to make the purchase. Since you are the Leader of the no code movement, and leading by example is the best way, send me your check and I'll deposit it for you.

ARLB075 ARRL Board meets

ZCZC AG55
QST de W1AW
ARRL Bulletin 75 ARLB075
From ARRL Headquarters
Newington CT October 29, 1996
To all radio amateurs

SB QST ARL ARLB075
ARLB075 ARRL Board meets

The ARRL Board of Directors met in special session October 24 and 26, 1996, at Windsor Locks, Connecticut. The following is a summary of major Board actions.

The League will seek an extension of the compliance date, currently set for January 1, 1997, of new RF safety regulations released in ET Docket 93-62, to January 1, 1998, allowing more time for drafting of acceptable implementation guidelines.

Responding to the continuing problem of minimal FCC enforcement activity, the ARRL will petition the FCC to create procedures to allow submission of private sector complaints of serious rule violations directly to the FCC's Chief Administrative Law Judge, hurdling bureau processing delays.

ARRL President Rodney Stafford, KB6ZV, was authorized to sign a formal agreement with the National Frequency Coordinators' Council, effecting the so-called single point of contact concept.

The ARRL will petition the FCC for a relaxation of the rules governing the Radio Amateur Civil Emergency Service to permit stations operating under RACES to communicate with non-RACES amateur stations actively engaged in an emergency or drill. An increase in the time limit on RACES drills to five hours per week will also be sought.

In view of the congressional mandate imposed on the FCC to auction the 2305-2320 MHz band for commercial purposes, ARRL will seek an increase in the amateur service allocation status, from secondary to primary, in the 2300-2305 MHz segment.

The Board adopted revised legislative positions for the 105th Congress.

The Board's WRC-99 planning committee will study an ARRL Industry Advisory Council recommendation to extend HF digital privileges to Novice and Technician Plus licensees and report back to the Board.

Effective July 1, 1997, ARRL dues of Full and Associate Members will increase to 34 dollars annually. The senior dues rate will be increased to 28 dollars.

The Board declared the theme of the 1997 ARRL National Convention in Jacksonville, Florida, to be Public Service. The Board also declared 1997 as the ARRL Year of Public Service, in recognition of the critical importance of public service activities in the amateur community.

The Board commended retiring West Gulf Division Director Tom Comstock, N5TC, for his long-time dedication and service to the ARRL.

Details will appear in January QST.

I am setting up a Sports Bar that will have approximately 15 different broadcasts displayed on
different monitors throughout the bar. I thought it might be possible to set up a system where the
audio from each game is broadcast over a specific frequency and I could build or have built little
battery powered receivers that could be placed on the table for a customer to be able to tune into
the audio of the game he pr she wants to listen to. If someone can point me in the right direction
as far as a supplier or company who can help with such a setup it would be greatly. I have little
or no knowledge about how to set this up myself and will have to rely on the advice of s someone
more knowledgable than myself.

Thank You,
Steven Altus

6023. Yaesu FT-530 giveaway (practically)

Hello all,

Awhile back, I posted the following for a friend, at the time he sold all the radios he was willing to give up. Now he wants to sell the rest, AND has DROPPED the price $150!!

A friend of mine has a "bunch" of Yaesu Dual Band Radios which he would like to sell at a great price. He purchased them for the emergency response group which he is envolved in and has decided to sell them and get radios which do not have as many functions and features. His policy appears to be "the simpler the better" for emergencies.

Yaesu FT-530 Dual Band HT
Yaseu Standard 2 Watt Battery
Yaesu Hi-Power 5 Watt Battery
Yaesu Rapid Charger (for both of the above batteries)
Yaesu Standard Battery Charger
Yaesu External Speaker/Mic
Yaesu Standard "Rubber Duck" Antenna
Antenna Specialist's Dual Band "Rubber Duck" Antenna

Each of them have had the out-of-band modification done by a local Southern California Dealer at time of purchase. They will be sold on a first come first serve basis.

He is asking $320.00 for each radio. They may be placed on a credit card for no additional fee, and there is a $5 shipping charge to anywhere in the US via UPS insured ground.

If you are interested, please call Steve at 818-502-0000.

(I am posting this for a friend who does not have access to the newsgroups, please do not write me back.)

As far as recieving from the helecopters, first thing you have to find out what frequency band they are operating in. Usually they are near the MDS (1900-2200 MHz), or they may be in the 7GHz band. They may either have syncronous antennas which track the recieving site or they may run omni and the recieving site tracks the transmitted signal. Their power is usually under 15 watts, and being microwave it IS line of sight. The video modulation is FM as are the audio carriers, usually 6.2 and 6.8 MHz, some have special subcarriers for other data. Basiclly they use the same equipment as the ENG trucks on the street and have to share the same 2 bands with them.

Come on down to the CW portion of 20m, Gargle - you won't hear any
of that nonsense. But then again, if that's the only corrupt voice
freq'y on all of 20m I suppose we're doing quite well. I guess
you could compare it to the 147.435 MHz rptr and 2m; one bad freq'y
doesn't shouldn't smear all users of a particular band.

> so does
> seeing how badly you can stomp your competitiors int the dust in the
> contest of the weekend ... so does saying "What's your 10-10 number?"
> over and over and over again ... so does "UR 599 in ___ PSE QSL TNX

When its done on a rig I've built myself from scratch it is pretty
rewarding; but you wouldn't know about that being an admitted appliance
operator and selectively choosing to abide by only a subset of Paragraph
97.1.

> .. they're either choosing to ignore the facts, or simply too stupid to
> understand them ... I find a little of both from the pro-code side at
> times ...

My goodness! It's only a hobby (99% of the time); don't get an ulcer.
(My other 1% is spent "working" hurricanes and tsunami warnings.)

> BULLSHIT, BULLSHIT, BULLSHIT!

Is that the anticode war cry? (Sort of like the Japanese TORA TORA TORA!)

>Ham radio is stuck in the 1950s or 1960s
> somewhere .....

Well that's a lie. The circuits I build from come from books written
in the 80s. =:o But what ever decade you feel we're stuck in, did
you ever consider that we might be quite content there? Heck, you still
use voice on 2m with your Tech license - did you ever consider that
voice as a mode is about as old as code sent via CW?

> average techno-ignorant pro-code fanatic will yell and scream

You operate using factory-built radios and then call us builders "techno-
ignorant"? You're a nut. You're new name is CarlTheKook.

> The majority of today's hams are so far behind the power curve of
> technology that they'd have to study 3 nights a week for six months just
> to try to catch up ...

So why won't you answer the question I've been asking for months:
How much of the gear in your shack did you build yourself from
scratch? No fair waving 97.1 in our faces unless you too abide
by it in its entirety.

Speaking of 97.1, how about this portion: 97.1(e) "Continuation and
extension of the amateur's unique ability to enhance INTERNATIONAL
good will." By hanging out on 2m rptrs with your tech license you're
certainly not abiding by that General Provision. Yet every time I fire
up my rig on 20m and chat (via CW of course) with my South Pacific pals
I'm doing my part to enhance international good will.

>Carl The Tech+

Whatever.

I'll try not to be overly harsh, but I think I can shed some light on this
situation (and, as you'll soon see, you SHOULD consider an apology after
you have learned something)

BTW: this is being posted back to all the groups to point out to EVERYONE
ELSE what to look for before going off "half cocked" about someone's
(intentional or otherwise) spam.

Ok, that out of the way, this is the evidence I have: While not a major
fan of Microsoft, their newsreader DOES have one useful feature -- it
RETAINS the tree/thread structure of past messages and/or messages marked
as "already read". The "history" on this particular message reads as

follows:

re: <bunch of gibberish-looking 16-bit characters> <=== well buried
followup to original spam
re:<no subject>
$$$LOSE MONEY FAST! BIG SCAM$$$ <satirical "opposite" post, good
for ROFL
re: drum clinic in bethlehem, PA 10/29 <=== our "problem
post"...

The fact that each is indented by the newsreader indicates that each of
these, although the "name" was changed in each instance, is indeed a REPLY
to the original post, and therefore, spammed accross all original groups
(unless measures are taken by the poster to trim these -- something that is
rarely done as it takes knowledge and effort on the part of the person
posting the message)

So, Chet, in response to your "I'm innocent" pleas, I'll make these
observations:
"...I only posted my note to a Drum Corps user group and Percussion user
group..."
Perhaps your intent, but likely you hit the "reply to group" button in a
graphical newsreader instead of the "create new message" -- intentional or
otherwise I don't know.

"... I think somebody is somehow using my access or something. "
Not likely -- it WAS your drum corp message that spammed accross the 'net,
not some "make money eventually" message using your (forged) user ID; ergo
it WAS you that sent the message

"...I would appogize, but honestly I have no clue as to how I could be
responible for these multiple posts to sites that have no relevance to my
topic."
Well, now you have a clue, so now I suppose you can apologize.

Tom (who knows that, due to the multiple changes and vague history of this
thread, WILL get flamed for explaining how internet newsreaders work)

Source record: 213947

Hello,
since 1995 I am running a QSL updatable server on
http://www-dx.deis.unibo.it/htlzh/

Now the system can be accessed also by e-mail
by sending message to:
qsl@promet12.deis.unibo.it
The subject must be your e-mail address or the
e-mail address of the person that must receive
the information.

The system permitts to give more command on each
mail. The first command you can try is:
help
that explain the various functions.

The system is under test, so please try it, stress it,
and report me comments, suggests and problems.

Does anybody else have this affliction? I met a fellow HAM at a British Car show in Indianapolis a couple of weeks ago. My son is a HAM, and is rebuilding my old TR4 as his first car. What a project, but he's learning the car from the frame up.

I'm into '60s' musclecars (GTO's) and also work at the Indianapolis Motor Speedway during the month of May on the USAC Timing and Scoring Staff. Racing software is part of that gig. Last year I worked 40 meter mobile during the rain delay and then after the race, from the infield. That was pretty neat. In any event, are there others who are into the automobile hobby?

The ham bands are part of the spectrum and EVERYBODY owns that ...
so it is unfair to exclude some just because of a completely ARBITRARY
"requirement" like the code ...

country clubs and houses are private property and cost money ... that's
life, but it doesn't justify code testing for access to the HF ham
bands.

:
: The problem with your scenarios is that computers != amateur radio.
: Amateur radio is about communications. Computer systems are not.

I guess nobody every told you, in the 1990's and beyond
ham radio = computers. Computer networking is basically communications.
Is wireless networking not radio then because it's computers? If/when
ham radios start digitizing your voice and your HT or mobile rig transmits
it digitally so a computer on the remote end can process it and decide
whether to retransmit it on the same repeater or send it to a remote
one instead, then it's hard to say ham radio != computers. Basically
what I said is exactly what many commercial and law enforcement
agencies are doing already. Notice how in many areas now you can't use
a scanner to listen to your local police officer talk on their radio
because it transmits data instead of FM voice?

To be honest though, I doubt ham radio will ever get to the point of
modern technology, too many people won't change and it'll stay the
way it is, or it'll just start to fade away and be forgetten about....

Not an uncommon problem, but with resistors, the best way around it is
a good digital VOM. Check each resistor with the meter first.
Doesn't cure the problem but is a decent workaround. I know a few
electricians with the malady, and they manage by being careful and
taking extra steps to make sure the browns and greens and oranges
don't get swapped.

>

This message is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual".)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to

pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous examination.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material and more information about classes, examination points (the exams are given by volunteer Hams in your community), and clubs in your area. A number of organizations will be more than willing to help. One such organization is the American Radio Relay League. Write them at:

ARRL 225 Main Street Newington, CT 06111

or call them at 1-800-32NEWHAM

Ask for their "Prospective Ham Package". It will include more detailed information, a list of classes and clubs in your area, and a list of scheduled examinations in your area. Include your ZIP code in your query so they can send you info tailored for your location.

If you are near a Radio Shack store, go there and ask for a book entitled "Now You're Talking". This book is also available from the ARRL. It contains all the information you need, including study

material and sample questions for the examinations for Novice and
Technician licenses.

Good luck, and welcome to the "magical" hobby.

Regards,

Hans, K0HB

Source record: 213762

I would like to get some suggestions and ideas for attracting younger Ham to our club.

The average age of the members at present is in the 70's. WE can't even get volunteers for officers because of the dwindling membership problem

1. The meetings are once a month on a Friday night. I believe this is one of the biggest drawbacks to getting younger members. They are either out with there families (Pizza parlor, etc,) or out looking for social companionship.

2. The 10 mile radius has about 40,000 population, 20 mile about 110,000. There are no other ham clubs until you get to the big city 30 miles away.

3. The local High School has no ham club.

4. I don't know if the local Community College (15 Miles) has a club.

5. What about sending a direct mailing to the younger hams? Did any club try it? Did it work?

6. Some of us (myself included) still use and appreciate tube type gear. Can this be turned into an attraction, or is it a negative for attracting younger Hams?

7. What have other clubs done to get younger members? Remember,even 30's and 40's are young to us.

8. My personal thoughts are that the days of rag-chewing-hamming are on the way out, as far as that being the main interest, as that is replaced by internet. I think it has to be some reversion to the technical side, including home brewing. What can a club do here?

9. Morse Code can be made an attraction. The challange of distant communications with minimum power. But, this is pushing. It is still unfavored by most new hams. How can a club make it more interesting?

10. HELP! What say? I really want your constructive thoughts and ideas.

Gene, WB6SZS

6049. mars fqcy modification TR9000

Does anybody out there know the Modification for the Kenwood TR9000
VHF transceiver??? Its a nifty little unit what with cw/ssb/fm and
loworbit satellite scanner system to account for doppler as passes
overhead. It however will only got to 143.980 on low end of 2 meters.
It does however go up to 148.995 on xmit on the high side of the band.
Is there or has there ever been a modification I can do to go down
lower on Xmit. Say around 142Mhz?????????????.
Tnx in advance for any info you mite have and pls send to me email
your response.

Brett; Yaesu has a service bulletin out on the FT-900 noise blanker. It can be improved if you don't mind working with surface-mount components. Went through the mod and got a blanker the takes the tops off of lightning crashes. There's a little distortion, but well worth the trade. See if you can talk your dealer out of a copy. Let me know what you think of the change. 73 Dave.....WA0ZZG

6051. 1997 ARRL-Sponsored National Exam Day Dates

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <3277C180.71E4@arrl.org>
Source record: 213765

1997 ARRL-Sponsored National Exam Day Dates

The ARRL-sponsored National Exam Day dates for 1997 will be the last
full weekend of both April and September 1997, as follows:

Spring - April 26 and 27, 1997

Fall - September 27 and 28, 1997

These dates bring our National Exam Day to a full two-day weekend for
both seasons.

January 1997 QST Exam Info will carry a detailed announcement.

If your VE team is interested in scheduling exams during either of these
two weekends, please let us know.

73,

Gary:

Thanks for your comments.

As a safety professional, it continues to be my experience that the
world does not quite work in the manner you perceive it.

The problem with going over FCC OET 65 point by point is that the FCC
makes no clear technical points to support their intentions. That is

further born out by their rationale for the report and order upon which OET 65 is based. Having closely viewed the process by which we have arrived at this sorry point, I can speak from experience that there is nothing that closely resembles usual and customary human safety protocol anywhere in their work. Take "informed consent" into court and see how far you get!

The whole FCC mess has been aptly dubbed "The RF Radiation Consultants' Welfare Act of 1996". This view has been shared by those in the telecommunications industry who have attemped to understand some of the convoluted methodology without success. Petitions for Reconsideration on the base Report and Order have been filed by many, including the Department of Defense, who have the premier RF Safety laboratory in the world, and upon whose historical work the transnational consensus standard ANSI/IEEE C95.1-1992 is based.

The FCC did not adopt C95. They made up their own standard without mainstream science rationale.

Upon this base, you really have a document that does nothing for human safety.

Regards,

Arthur Varanelli

> I have heard that they wanted to reduce the number of new hams.

After getting past the 10WPM "hump" the code is a conditioned reflex,
not a conscious memory. It's well known from lab psych experiments
that conditioned reflexes aren't forgotten like a conscious memory.
Remember the old cliche about "you never forget how to ride a bike"?
Same thing. So by forcing people past the hump, fewer people would
fall into the trap of learning the code to 10WPM, having to put
ham radio to the side for other things temporarily, and having
to start all over again to come back -- which would *reduce*
the number of hams.

Hello,

I'm looking for a single-channel radio (transmitter and receiver) I using for a project. This is simular to what my garage door opens does. The reveiver needs to be a larger unit, or has the capability to be place in it's own case. The distance between transmitter and receiver needs to be at least 40 feet.

Once the single channel is activated, I need to control a relay. This relay can be either 12, 24 or 36 volt circuit.

I have everything in place except the single-channel remote control.

Can seomeone point my in the right direction.

Joe

>communications: you are wasting your time. Emergency communications is
>already provided by many other groups, including the american red cross.
>Yes, the ARC was granted use of 220-223 MC by the FCC for their
>emergency communications use. Their attorney who petitioned the FCC is
>also the ARRL General Counsel in WASHINGTON DC. Most of the members

Here are the facts, from the real world, from a real, recent disaster in
which emergency communications were needed, Hurricane Fran's blast through
North Carolina on September 5, 1996.

ARES provided vital communication, linking various offices of the
National Weather Service (including Raleigh and Wilmington), linking the
Governor in Raleigh with sites in Wilmington, coordinating relief efforts,
providing communications assistance for the state Highway Patrol (who
experienced some storm-related equipment problems) etc. EVEN FOR THE RED
CROSS. Many phone lines were down... many cellular phone sites were
inoperative. Where VHF repeaters were down, we used VHF beams and high
power, relays and/or HF frequencies to get the messages to the recipient
despite the problems. Ham radio, VHF and HF, came through.

Hams were called upon BY THE RED CROSS to operate ham radio stations at
their kitchens (where they fed the homeless) and to assist in coordinating
relief. I know... I DID IT MYSELF, so this isn't hearsay. I was there.

Been there, done that, got the T-shirt, got the proof you are once again
wrong, Wrong, WRONG, WRONG, WRONG, WRONG, WRONG, WRONG.

Source record: 213774

The question for October/November 1996:

Why Have You Not Chosen To Join The ARRL?

Less than 1/3 of all ham radio operators are members of the ARRL. The
question for this month is
directed to those of you who are not members.

From the list of possible reasons below, select the reason that best
describes why you have not
chosen the join the ARRL.

The results:

The dues are too high. |****************** 19
Their Ham policy positions are not close to mine.|******************** 20
They are too closely tied to ham commercial interests. |**** 4
I was not treated well by one of their representatives.|*** 3
I just haven't gotten around to it. |*************** 15

Please do not disregard situations where the line can be used for
matching. Take a quad loop, with 100 Ohms input impedance.
A quaterwave of 75 Ohms line, with a few coiled turns for a balun
will save you an antenna tuner. And there a other situations
where matching is simplified (less losses) when using a defined
length of line for tranformation.

Excellent example here. I fed a triband quad with this method for several years. It was the only way I could get a GEM Quad to play with a single 50 ohm coax to three tuned 75 ohm quarter wave stubs.

There is a member of our Amateur Radio club that has a Hallicrafter Transmitter Model HT-40 built from a kit circa 1960. The transmitter covered from 160m thru 6m. He is looking for the manual that goes with it as over the years some of the parts have been used for other projects. If anyone has a copy, please e-mail me and I will contact the Amateur.

Thanks,

Harry

There are a few ways to make your novel idea work (and I think its a cool idea!). A simple way is to buy already made low power FM transmitters and place simple FM radios at different tables, if you had a digital display on the radios it would be easier for customers to tune in the right one. These can be found by the bunches in most electronic magazine advertising sections. an added plus to this method is patrons can also use their own walkmans if they wanted to. Another way would be to just hard-wire all the booths using 12 pair cable and have speakers with a selector knob. this way obviously does cut down on the flexibility though.
Good Luck
Mark

I've worked with a lot of these channel banks and I can tell you from looking at them that it would be a major undertaking to design and build one on your own. I believe that these can be purchased used from someone like Allied Communications at a pretty good price.

Keep in mind that these channel banks require a full duplex channel to operate.

Actually the system that most people uses is called Tunnel Radio which is
made by a company called, amazingly enough, Tunnel Radio. It uses a lossy
coax system (the shielding isn't 100% on the coax) and every so many feet
it has an amplifier in the line which is powered by a DC voltage carried on
the coax. I'm not sure if Tunnel Radio has a web page but I would contact
them for more info.

Hi! I am looking for plans to build a remote control extender. I've seen the units at Radio Shack for a rather costly price, but think that it can be home brewed at a much cheaper price.

What the unit does is pick up the infared signal and rebroadcast it.

Does anyone have any ideas on where to obtain plans, can you please e-mail me..

Thanks...

: internationally set number is inappropriate. Having a CW speed of 13

The "internationally set number"??? There is no such number.

Paragraph S25.5 (1) of the ITU radio regulations requires only that a
person seeking an amateur licence authorizing operation below 30 MHz
"...shall prove that he is able to send correctly by hand and to receive
correctly by ear texts in Morse code signals." No speed is specified.

The basic code requirement for US hams was set at 10wpm in 1912. It was
raised to 13wpm in 1936 to ensure that licensees had gotten beyond the
"hump" that most people hit at around 10 wpm.

A "hump", huh? Looks more like a wall from here.

At that time most ham operation was CW, I assume, so anyone who could get
their speed up to 13 presumably would in due time anyway. The only people
this would have affected significantly were those who could not get over
the wall at all.

Why did the ARRL seek this rule change in the first place?
I have heard that they wanted to reduce the number of new hams.
If this is true, then they must have believed that a signicant number of
applicants would never be capable of passing the 13 wpm test. It would
be interesting if they believed that, since it has always seemed to be
the central article of faith amongst the pro-code-testing crowd:
that anybody can learn the code.

There's an important issue that has not been mentioned.
If your SWR is 1:1, coax length is unimportant.
If it's not, then the impedance looking into the coax is a function
of the length. Draw a (constant SWR) circle on a Smith Chart. As you
change length,

you move around that circle. As long as your transmiter can match any impedance on the circle, you're OK. With a high SWR or with a modern no-tune rig, you might find that the rig behaves significantly differently depending on the coax length. SWR doesn't change, but the matching network required to drive the coax sure does.

Having said that, I suggest you put your effort into making the antenna 1:1 rather than messing with the coax length.

Finally some sensible information. Most all of this is in the 450-451 Mhz areas. A few rare one have been caught in the 170Mhz press freq ranges. The only exceptions are those that have moved up to encrypted UHF to prevent unauthorized use of their information.

Here in Maryland 450.4875 and 450.850 Mhz have plenty of activity in the Beltway area, and makes for some good listening too, more fun than some morning zoo stations.

Source record: 213820

Greetings to all!
I am trying to find a Mod to a Radio Shack HTX-212 which will allow me to do one or both of the following:

I would like to be able to use it on an emergency/natural disaster frequency of 155 something-or-other MHZ. (transmitting I mean :>)

I would also like to be able to program the local NOAA weather stations into the memory, its current state only allows ham freqs to be stored (144-148), even though the VFO will tune higher.

Any advice on this would be much appreciated!

Stephen:

Although the Morse code tests may vary from VEC to VEC and VE team to VE team, if your test is ARRL/VEC-coordinated the Morse code exam speeds will routinely be as follows:

Element 1A - overall speed is 5 WPM, farnsworth character speed is 18 WPM

Element 1B - overall speed is 13 WPM, farnsworth character speed is 18 WPM

Element 1C - overall speed and character speed are both 20 WPM

We supply the exam audio tapes for our VE teams. Our VEC-supplied audio tapes are produced with a 716 Hz audio tone, and we have include an exactly one-minute practice segment at the beginning of our exam message tapes. So, if a VE team questions the speed accuracy, they can time the one-minute segment or measure the audio note frequency to be sure.

73,

I'm sure you do not!

Here, all you good 'ol boys. Here's one of your own! A fine example of the intelligent life you find on HF these days. This guy is obviously highly educated and a credit to ham radio. The hobby will live a long time if we fill up the bands with this type.

Well Mr. Burr
I tell you like I tell everyone else.
I you can't take the heat get out of the kitchen.
A lot of your operators that are new come on the freq. where
there is a conversation and want to jump in, and be as you
would put it, One of the good OLE boys. With nothing to say
but how is the weather or how is my signal. But the operators
on the other end are supposed to drop everything there doing
and there topic what ever it was at the time and help the new
kid on the block. There are hams out there that will indeed do
that but not all of them. I get so tired of hearing about the old
ham operators and how rude some of them are. Tell ya Dave
don't knock these good OLE boys till you have been around as
long and did what some have done. As far as your attack on
me personally, You do the same as a lot of people, Either across
a mic. or modem but when it came down to the face to face (Not meaning
fist fighting) you would more than likely set back and keep you lip
shut. But go to your next ham fest and make statements like you do
here and see if you get the same answers OK big boy....
Have a good day
Dave

lik
you

No help from here. My experience has been that the noise blanker on my
FT-900 is very much like all the noise blankers I've seen on non-DSP
radios. It is extremely effective at killing motor noise, ignition, etc., but
not at all useful for eliminating atmospheric noise. When I use my FT-900
on my boat, the noise blanker makes a huge difference, as the boat throws off
a fair amount of snap-crackle-pop. But atmospheric noise? Forget it.

Just a quick question, what musical note (A-G) is 716 Hz? Super Morse only
lets you set the tone as a musical note (A-G).

Stephen

Anyone and I mean anyone can learn the code. There is only one exception, a person that is deaf. However many people with poor hearing have passed the code test using a light bulb.

The code argument goes way past just code. It reflects attitudes of the people of America these days. All around the world we are called the "lazy americans". For good reason. Just look at the news story that was reported by CNN two days ago. Collage students cheating on tests for $6000.00. The easy way out. The people that want to see code go away are for the most part lazy. Plain and simple. If someone studies, and puts forth an effort, that person will learn the code. Like myself, they may even find that using code on the air is fun.

My point here with the no-coders is stop being lazy. Put forth an effort to learn something new. Don't have time you say? Then maybe you don't really have time for this hobby. It's just like flying model aircraft. If you don't have time to build one, then you don't have time to fly one. That is what ham radio is. It's a building, learning, ever expanding experiance. So you learn something new like

code, then you use it, then you get better at it, then you upgrade. You study and learn the theroy, you build your first radio, you build a better one, you work DX.

Here is a thought for you all. Part 97 says we have no type acceptance requirement for ham radio. Would eliminating testing force the FCC to place type acceptance requirements on us? Think about it, with relaxed testing, no one would really understand and know how radio works. It would become a RF nightmare!

6102. EARN $50.000 LEGITIMATELY IN 6 WEEKS

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: gs34754@pinus.cc.etf.hr
Message-ID: <5583i0$smd@bagan.srce.hr>
Source record: 213836

Subject: EARN $50.000 LEGITIMATELY IN 6 WEEKS
Newsgroups: alt.answers
Summary:
Keywords:

PRINT THIS OUT AND SAVE THIS POSTING ON YOUR COMPUTER,
READ IT OVER A COUPLE OF TIMES,
INVEST,
AND WATCH THE MAIL BOX FOR THE MONEY!

$5, plus the costs of 5 envelopes, 5 peices of paper, 5 stamps and
a couple of hours on a computer and get $50,000
or more back in about six weeks!!!!!!!

Invest in this TOTALY LEGITIMATE oppurtunity,
Remember that this is legal, so you should report the profit of your
investment on your taxes.

Hello, I saw this news group posting and decided to invest $5 into
it and see what I get in return. Hey, what's $5 ? Keep my address and
keep in touch on the amount of money you get. In the posting I saw the
person had done this before and made $47,326 in six weeks with his $5 and
the cost of the stamps to mail the $5 to the five people on the list.
This was his second round. If you do more than the 200 listings you will
make more money.

In this day what does $5 get you, and with all the people on the
internet you are going to get you $5 back in days.

Make $50,000 with a small amount of effort and a small cost of only
$5 and a few hours of computer work (after you have saved this article on
your computer, you can use it to compose your own article, if you want;
just make the neccesary changes, like changing the names below; it should
save you a couple of hours of computer work).

This is a chance for the average person to get ahead in life so
please send out $5 and put a little effort into your postings, and then
watch the money roll in.

This investment will cost you only $5, five stamps, envelopes, paper
and a little computer work. If YOU and EVERY OTHER INVESTOR is HONEST and
follows through with the plan, you will make $50,000 in about six weeks.
Each investor will also make $50,000 in six weeks.
THIS IS A LEGITIMATE INVESTMENT OPORTUNITY !!!!!!!
When the money comes in, make a list of your investors, and you just
started your own ORDER SERVICE COMPANY (don't worry, you don't have to do
anything special, just read this article to the end, and you will get all

the information you need). Since you are starting a company
that provides a service, you make the money LEGITIMATELY (that's the
whole idea about this company business). The service you provide is the
"list of investors" that you have compiled.

You invest $5, and you receive a return on your investment. So does
the next investor. NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY LEGITIMATE.

There are other plans like this out there that ask you to send out
$10 to five pepole, thats a fifty dollar investment and its hard to give $50
out when you are struggeling to pay the bills already. But with this
plan you only invest about $5 and others only invest about $5. Hey what's $5
now-a-days? You could probably find that in the cracks of your couch.

If you are not interested, than don't participate, but please print
this article and pass it on to someone who may be interested, so they can
take advantage.

THIS IS WHAT YOU DO:

The procedure is simple:
1) Write your name and address and an e-mail address, on 5 sheets of
paper. Below that, write the words: "Please add me to your list". Then
fold a $1 in each piece of paper (make sure the money is inside the
paper, so that it can't be easily stolen, send no coins) and send them to
the following five addresses:

1. Allen Malkowitch
23 Baker Street #712
Denver CO 80203
USA

2. Wilma Vogel
Broettenstr. 19/25
9020 Klagenfurt
AUSTRIA

3. Lenny LaForget
364 Delisla
Chicoutimi
G76 3B4
CANADA

4. Goran Stojsic
Ljubljanska Avenija 2
236/B
10000 Zagreb
CROATIA

5. Robert Radovic
Ljubljanska Avenija 2
224A/A
10000 Zagreb

CROATIA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 should become #4, and so on. Put your name as the fifth one on the list. Any simple text editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000 of them these days, so it shouldn't be hard to find many. Spend some time on your investment and post to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message and the more money you make. So post to as many as you can.

You are now in an ORDER SERVICES BUSINESS, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself, "The Manager", of "The Boss", whatever, but make sure your address is correct.

HERE IS HOW THE SYSTEM MAKES MONEY:

-Of every 200 posts I made, I received 5 responses. Yes, only five. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. You make $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return= $500. They make 200 postings each with your name at #2= 100,000 postings= 5,000 returns at $1 each= $5,000.

-Finally, 5,000 people make 200 postings each with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES "ONLY" 200 POSTINGS!

From time to time, when you see your name no longer on the list, you can take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings in only a guideline. The more you post, the greater the return.

Let's review why you should do this. THE ONLY COST IS $5. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS!

You may ask, "what happens if the scheme is played out and no one sends me money?" Big deal, you lose $5. But what are the chances of that happening? We are talking about the Internet here.

There are millions of Internet users, and thousands more joining everyday! YOU CAN'T LOSE!!! There are too many people out there to not miss this message, and there will be thousands new tomorrow.

Remember, read the instructions CARFULLY, and PLAY FAIRLY. That's the only way this will work. Get a printout so you can refer to this article easily.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES, NOT PLAYING THE GAME FAIRLY IS ILLEGAL. SO LET'S BE REASONABLE AND PLAY FAIRLY, SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK!!!! :)

Well I guess I should have stated that I was assuming that the object
was to multiplex 24 digital signals. In that case the the analog
portion would not be needed.

If computers are to be connected it would be better to stay digital
rather than do the conversions from digital to analog to digital
to analog and finaly to digital.

I wouldn't want to build a full channel bank either.

Bill K7NOM

6104. Review: The error of his ways (Burt)

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: Andrew C Robertson <drewbob@mit.edu>
Message-ID: <32779530.5F5E@mit.edu>
Source record: 213838

In yet another "name withheld" anonymous "email" posting, the (thankfully) inimitable Burt attempts again to portray his contempt for hams as having some source or cause outside of his meager, imprisoned little mind.

Burt tends to betray a grossly inflated view of his own self-importance. Here, he shows that he thinks readers "care" about what "other hams" say about him. (Actually, the only thing that makes me think the quoted mail wasn't written by Burt himself is its level of eloquence - Burt has never shown his self-expressive ability to be anywhere near even that basic level.) Further, Burt seems to think he's doing hams a favor, that the lives of hams are afflicted by some "problem" requiring Burt's attention. The reality is, of course, that Burt is the one with the problem. It is wise to remember the words of Franklin*: "let he who is not living in a glass house throw the first stone, or it's gonna be 2 weeks in Aruba for the glass-man".

Burt (and those who agree with him) tend to rely heavily on the word "loser", a meaningless pejorative term. Truthfully, there are few things more pitiable than someone who finds it necessary to categorize people in this fashion. Burt, with his flair for unintentionally comic naivete, splashes these categorizations around as though it indicates anything but deep-seated (most likely subconscious) despair over his own inadequacies.

If there is anything negative to be said about the ham community via Burt's postings, it is that said community has not produced a troll with a better imagination, or a reasonable grasp of reality.

>boom bulge, the world population, and the U.S. population in particular,
>is aging.

The average age of the world's population isn't increasing, it is still
under 20, and increasingly under 20 as aid programs reduce infant mortality
in the third world, but US and European populations are aging. Unfortunately,
I don't have demographic information on Finland specifically, but I do
have some for the US.

>This is not news, but it is affecting all kinds of trends --
>such as crime rates coming down because most crimes are committed by
>young males. So the fact that the ham population is aging should not be
>particularly alarming unless it exceeds by a significant margin the
>aging curve of the population as a whole.

That's true, but 3/4 year per year is *significantly* sharper than
the demographic trend for the general population. As the baby boom
matured, the US average age increased at a rate of about 1/4 year
per year. Now as Gen X (the children of the boomers) starts having
their own families, the aging trend has slowed and demographers
tell us there is a baby boomlet coming which will once again challenge
our schools (and later our prisons). Add in the illegal immigration
(and the fecundity of the immigrants) we are seeing, and the demographic

trend for the future is down, not up.

(Unfortunately, the income of these youngsters isn't going to be sufficient to support the geezers starting in about 7 years if something isn't done to limit entitlements growth. We're going to be in a squeeze between 2005 and 2025 trying to pay for the aging boomers, but the trends reverse again after that.)

During the 80s, the US amateur population was aging even faster than 3/4 year per year. That reversed with the introduction of the code test free Tech, and US amateur average age has declined sharply from a high of 59.5 to 53 since then. The rate of decline has now tapered off. The current US general population average age is about 33, which is the highest it has reached since WWII, but still much lower than the average for amateurs. Of course we'd expect amateur average age to be higher than the general population since there are few infants or toddlers who hold amateur licenses. But the gap is still rather gaping. If amateur radio were attracting youngsters the way it was in the 50s and early 60s (pre-Incentive Licensing), the average age would be closer to 45.

If current demographic trends continue, average amateur age, assuming amateur radio still exists, will be declining sharply by 2025 as the majority of the boomers die off and the Gen Xer's kids get licensed (if they do, their parents are the ones who emphatically haven't gotten licensed at the percentage rate that their boomer parents did).

2010 to 2025 will be a dangerous time, because the Gen Xers will hold the reins of power, and they aren't favorably disposed toward amateur radio, and they'll be well and truly sick of carrying the geezers who'll mostly make up amateur radio on their backs. If you think the current administration is eager to sell amateur spectrum, just wait until it is the Gen Xers turn.

My feeling is that if amateur radio doesn't radically redesign itself, and fairly soon too, into something relevant to modern communications and to the people who are going to be the future of modern communications, there won't be an amateur radio in 2025.

6107. Need GE and Motorola Information

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: macmike@netnitco.NET
Message-ID: <199610301759.LAA16706@aegis.nitco.com>
Source record: 213841

I recently purchased some GE Mastr II's and some Motorola Micors that I
have been told will go to the 2 Meter band. Has any one had any
experience they could help me with on these. The Mastr II's are 8
frequency mobiles with scan heads. Need info on where to get crystals. We
want to take a couple and convert to a repeater. Any one done that? If so
wiring would help as well as time - out timers and Iders, etc.
Also want to put some on Packet. Any help would be greatly appreciated.
Also we got some standard mobile units for 6 meters need to find where to
order the Eproms to change them over.

>

>Carl, can't you see that the fact that morse code is a communications
>mode that has stood the test of time is a point in its favor, not
against
>it?

Has it survived the test of time? Or is it being preserved through
law? If
Morse Code can survive on it's own they why are so many people
fighting to
preserve it's special status?

Aren't you really afraid that if the Morse Code requirement is dropped
internationally that it will die out as a communications mode?

Most hams aren't really interested in Morse Code as a communications
mode, many
learn it to be able to use more modern communications modes, it serves
a
gatekeeper function, keeping the numbers small because of the fear
that all the
ham bands will become saturated.

I just got my no-code ticket 3 weeks ago. While I agree with your post,
I take direct offense to the above statement. I have been studying the
code since I took the test at least once a day and I do not consider
myself lazy by entering this hobby as I did. I WILL pass the code test
within 1 month from now. I do not consider myself lazy. You may have
meant to say "...point with the no-coders not intending to pass the
test..."

>Put forth an effort to learn something new. Don't have time you say?
>Then maybe
>you don't really have time for this hobby. It's just like flying
>model aircraft. If you don't have time to build one, then you don't
>have time to fly one.

Not true. Although I can spend an hour every couple of nights working
on my Clancy Lazy Bee, or Balsa USA Phaeton 90, the addition of a new
baby to the household precludes trips to the flying field for the
foreseeable future. Just because I can't fly 'em right now, doesn't
mean I won't build 'em right now.

That is what ham radio is. It's a building,

6113. Re: Wanted Used (but working) T1 Channel Banks

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: rhelton@netcom.com
Message-ID: <rheltonE03s87.1on@netcom.com>
Source record: 213847

: Well I guess I should have stated that I was assuming that the object
: was to multiplex 24 digital signals. In that case the the analog
: portion would not be needed.

A channel bank uses T1, a 1.544Mbs signal that is full duplex. A T1
consists of 24 channels in the US and depending on the T1 signalling choosen
can run 24 56K or 24 64K DATA channels.

The channel cards allow you to select for a wide range of
telecommunications needs. Typically for data you would have an Office
Channel Unit in the channel bank and a DSU at your data equipment.

If you are working with eithernet, there are a ton of ethernet to T1 muxs
available.

Hope this helps you!

From ARRL Headquarters
Newington CT October 30, 1996
To all radio amateurs

SB QST ARL ARLB076
ARLB076 FCC computer down

The FCC's Gettysburg, Pennsylvania, office reports that its amateur
computer system has been down for the past two days because of
unspecified difficulties. Despite the current problems, the FCC
still hopes to begin issuing Gate 2 vanity call sign grants by the
end of this week, starting with the first-day applications now
entered into their computer system.

Hams are asked to be patient and to refrain from calling the FCC to
inquire about the status of their vanity call sign applications. The
Gettysburg FCC Office Consumer Assistance Staff is not able to
provide further details on the delay.

On a related note, due to the amateur system difficulties, no new
amateur license or upgrade grants have been released since this past
weekend.

Better hope the crash didn't take out the Vanity Calls database,
and that they have regular backups.

Otherwise, they'll have to start all over from the beginning again!

It is also one of the best ways to practice copying information quickly
and accurately for sustained periods. If I was in a disaster area, I
would much prefer a contester to take the information than a non-
contester.

>
> (b) Continuation and extension of the amateur's proven ability to
>contribute to the advancement of the radio art.
>
> < What are the contributions from Contesting? >

Try comparing a contesters antennas to those of a non-contester.
Also DSP filtering was demanded by contesters, and now DSP is starting
to appear in more basic radios. Note the arrival of the TS570. DSP is
at the forefront of technology, and contesters were one of the first
groups of hams to use it.
>
> (c) Encouragement and improvement of the amateur radio service

'advancing skills in communications'..... see my answer on (a) above.

>
> (d) Expansion of the existing reservoir within the amateur radio
>service
>of trained operators, technicians and electronic experts.
>
> < Nope... >

Trained operators means that hams can be called on in times of war to
provide communications. Now who would be more efficient at doing
that.... without doubt a contester.
>

If you don't believe that contesting can enhance international goodwill,
then you obviously weren't at the World Radiosport Team Championships
held in San Francisco in July this year. There were 52 teams from over
30 countries, and everyone had a superb time, and made MANY lasting
friendships around the world. These teams were picked from the worlds
top contesters.

Why would anyone want to do this ??

Have you heard of the Wireless Telegraphy Act of 1949. Just how do you intend to license this device. UK CB is 26.965-27.405 and 27.60125-27.99125. So between 27.405 and 27.60125 this device would be operating out-of-band.

Besides, there is no way on this earth that the Radio Communications Agency would ever consider licensing such a device anyway, because this device is intended to cause deliberate harmful interference which the RA goes to great lengths to stamp out.

I would advise you read the Wireless Telegraphy Act of 1949 so you will at least understand the charges against you when the RA takes you to court for using a device of this type.

Basically, don't do it, but if you do, you have been warned of the consequences.

>> on a given set of frequencies has repercussions throughout the world,
>> because of ionospheric propagation.

Jim,

I DO understand how HF radio works (as a matter of fact, I used to work
as an engineer for Collins ... amongst others ... I have designed LOTs
of HF radios and HF radio systems in my 25 years+ as an RF engineer).

It sounds to me like you THING you know how it works, but you really
don't or you wouldn't make such absurd, outrageous statements ...

>The only problem with this thinking is that there is not a shred of evidence
>to support the view that the ITU, the FCC, Industry Canada, or any other
>spectrum management agency has every decided at what point there are too many
>amateurs. Conn continually points this out, but has not one iota that

>for them.

If they are concerned about ANYTHING relating to our spectral occupancy,
it's that it's not occupied enough and have they given us too much/can
they take some back to give to someone who will REALLY use it?

> >>If you won't recognize that fact, then there
>> is no sense continuing to discuss it with you. I realize that you reject
>> the role of the ARRL, but I didn't know you rejected the role of the FCC
>> as well.

I DO reject the ARRL ... their policies run directly counter to the best
interests of the future of ham radio ...

I DO NOT reject the FCC ... all I rejected is something that Jim Conn
falaciously asserts is their policy/obigation (which is neither) ...

>You are in favor of HF anarchy, just as 11 meters (CB) became
>> anarchy when the doors were opened to everyone and the rules went out the
>> window.

No, Jim, YOU get real ... I am not advocating "HF anarchy" ... I am
advocating "HF usage, participation, and technology development"...
three things that you irrationally fear ...

>
>So, we are to understand the because CBers didn't learn Morse code, anarchy
>will result once Morse code is abandoned for operation on the HF bands. Get
>real indeed.

That's one of the Pro-Code Myths ... standard issue for the past 20
years or so ...

>I suppose that the anarchy on the CB band, if it could be
>called as such, had nothing to do with the fadishness, the lack of
>enforcement or the lack of any testing, let alone the relative ease of
>acquisition of this equipment.
>
>Besides, a bit of anarchy might do a lot of good because it would force
>amateurs to consider investigating better more efficient modes of
>communications, rather having to depend on Morse code testing as a measure of
>comfort for radiotelephone operation.
>

It's not anarchy that they fear, just change ... the anarchy part is just another red herring designed to divert attention from the real issue ...

6126. Element 1C Code Speed

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-30 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiE02BsD.1r8@netcom.com>
Source record: 213902

I've been practicing for Element 1C and am confused about what the actual code speed will be. Super Morse sets a 20WPM send rate and 26WPM character rate. I asked the VE Examiner (ARRL) and he said the test is both 20WPM send and character rate (non-Farnsworth), but wasn't sure because he never timed it. He did say that Element 1B was 13WPM send rate and 18WPM character rate which is consistent with Super Morse, which I'm using to practice.

Is there a standard for code speed on code tests? Do I need to ask the examiner for the source of the test to determine the actual speed? Is there at least a standard for ARRL code tests?

Anyone know how to make NuMorse go faster than 10WPM send rate and 20WPM character rate?

Stephen

Conrad,
Do you realize that this scheme is called Wire Fraud and Mail Fraud? Most everyone else does that reads this crap. ESPECIALLY with such a misleading title and the fact that it was cross-posted to 10 different NG's! A message has been sent to your ISP notifying them of your actions, along with copies to the FCC and US Postal Service. KEEP THIS CRAP OUT OF OUR NEWS-GROUPS!

To Home it may concern!

Yea like you don't have none of that shit on two meters!
Bull shit.
I here mostly on 2 meters is a lot of (75 and 80 Meter Wan A Be's) And a
lot of
converted know it all CB operators. In fact some CB operators know more
that half of the
nit wits on some of the repeaters. So if you want to listen and run
operators down look in
your own back yard, or better your own repeater's. Half of them don't know
Jack Shit about radio but to key the mike and pretend there on HF. If you
are that upset about what you here you can always turn the VFO or the Off
switch.....If you can't take the heat, Get the BEEP outta here....

And nats all I got to say about thaaaut.........

This does not reflect the opinions of my employer I don't think.....

Is there any confirmation yet that the FCC will be closed down
-
early in 1997? Newsdates had an article that the FCC will be

converted to an Office of Technology in the executive office of the

president & have a staff of only 160 people.
NDQS46A@prodigy.com

ADVISE:

Take the radio back and spend the money on a real
radio. Kenwood, Icom, Yaesu, etc. Get your money's worth ....Radio
Shack sure got your moneys worth.

In article <327791A8.91B@foothill.net> Eugene Rippen <soundval@foothill.net> writes:
>I would like to get some suggestions and ideas for attracting younger Ham
>to our club.
>
>The average age of the members at present is in the 70's. WE can't even
>get volunteers for officers because of the dwindling membership problem

This is a problem. To rebuild club membership, you need an activist group of officers who have that as their primary focus. Since it sounds like your group is mostly retirees, there should be some members with plenty of time to devote to this. *You* sound like a good starting point to be a sparkplug in this effort.

>1. The meetings are once a month on a Friday night. I believe this is
>one of the biggest drawbacks to getting younger members. They are either
>out with there families (Pizza parlor, etc,) or out looking for social
>companionship.

This may be a problem. One group of which I was president moved its meetings to Saturday mornings. That seemed to help get the membership out. A brunch associated with the meeting can help. We made it a tradition that the president was responsible for bringing donuts to the meeting and the vice president handled getting a large coffeemaker setup and running. That was eight years ago, and the current officers have carried on with this. It really seems to help.

Saturday morning meetings may not be a good idea for your particular group. It worked for us, but that's no guarantee it'll do the same for you. You need to observe community patterns and see what looks like a good time and place for meetings and give it a try. Be creative.

Of course the business part of the meeting should be kept very short, and good programs are a must. Other activities, such as foxhunts, can be a plus too. The goal is to give the members something to *do* besides come sit and grouse.

>2. The 10 mile radius has about 40,000 population, 20 mile about 110,000.
>There are no other ham clubs until you get to the big city 30 miles away.

Okay, you've got a potential audience to draw from, now what do you *offer* them? Does the club sponsor a repeater? Or does it have some other focus such as packet which can draw together a group of hams? Selling a ham club is like selling anything else. It has to have curb appeal. It has to offer something people want. Just getting a group of people together once a month isn't enough.

>3. The local High School has no ham club.

This is a major opportunity. Talk to school staff about sponsoring one. Volunteers from the club can help kids learn about amateur radio and get involved with it. If possible a school station should be sponsored. At the very least do demonstrations. The demonstrations mustn't be dull. They should be short, exciting, and as hands-on as possible. Stress that ham radio is one of the few activities where a kid can participate on an equal level with adults. And make it fun and exciting. Kids are easily bored or turned off by dull stuffy presentations (actually that's true for everyone). If the presenter is excited and enthusiastic, the kids will be too.

Concentrate your activities on the *junior* high students, grades 7, 8, and 9. These are the most fertile ground. Once they start thinking seriously about cars and girls, it is difficult to add amateur radio to their activities, but if you get them early, they can keep an amateur interest when those other activities become important to them.

A club station is *very* important to youngsters. Often they won't be able to set up their own stations, so the club station becomes the place where they can operate. A club station at the school can be good, because the kids are already there. But you need a staff sponsor who will hang around and be responsible for the activities. Ideally, the staff member will be a ham, but if he is not, then one of the adult club's members needs to be there too.

Alternatively, the adult club can have a club station of its own that it will make available to the kids. This may have to be a longer term goal. Years ago, when I was in high school, our local adult club, which sponsored our school club, had its own clubhouse, leased from the county for a dollar a year, and had two dandy HF stations set up there complete with towers and beams. Any member, including kids, was allowed to use these stations. This was a *huge* draw.

But a member can make his individual station available to the kids too. This can be fun for older people who miss having youngsters around the house, and it can be a real boon to busy parents too because they'll know their kids are safe with a responsible person.

>4. I don't know if the local Community College (15 Miles) has a club.

This is less fertile ground, but it is worth a shot. Talk to the EET faculty. See if they'd like to add a credit or non-credit course on amateur radio. Community colleges are mostly commuter colleges and aren't as good for club activities as a residential college. Still, this can serve as a recruiting area for your club.

>5. What about sending a direct mailing to the younger hams? Did any club
>try it? Did it work?

If your club is obscure, this is worth a shot too in order to get the club known in the area. It is expensive, however, and the return rate

is generally very low. Flyers left at Radio Shack and other electronics stores can help too. Get some press in the local community papers. Most have a community activities page. Get your club meetings listed there. Write an article about the club for the paper. Etc. Talk up the club on the air. Use ham radio to carry your message.

>6. Some of us (myself included) still use and appreciate tube type gear.
>Can this be turned into an attraction, or is it a negative for attracting
>younger Hams?

Antique radio is always a good club program. Even hardcore techies like to see how things used to be done. Again the key is a dynamic presentation. Make radio history come *alive* for your audience and they'll eat it up.

>7. What have other clubs done to get younger members? Remember,even 30's
>and 40's are young to us.

It's hard to get people in their 30s and 40s. Their lives are very busy. You have to offer them something they want. This is where a club sponsored repeater is a strong drawing card. This is where a strong packet presence can help. Etc. You have to be focused and offer something that is better done by a group in order to attract busy people to your club.

Family oriented activities are a good draw too. Sponsor a ham radio picnic several times a year. Have radio games in which the whole family can participate. On foot foxhunts are good for this. Plant some little Part 15 sources in a park and let people hunt them with transistor radios. Have plenty of cheap little pocket radios for the kids to use.

>8. My personal thoughts are that the days of rag-chewing-hamming are on
>the way out, as far as that being the main interest, as that is replaced
>by internet. I think it has to be some reversion to the technical side,
>including home brewing. What can a club do here?

Homebrew can be the focus of club activities too. But this can be a hard sell. Clubs can make group buys of kits and have project nights to help those building, and to allow them to show off their work. You can have technical programs explaining facets of electronic construction and theory. But you've got to make it interesting. This is so easily deadly dull. Again, the presenter has to be excited and enthused, and lots of hands-on is vital.

I don't think ragchewing is a declining activity either. It's just that its major focus has shifted off HF and onto VHF. If you sponsor a repeater, make it a focus of lively conversation. Don't fall into the trap of deadly dull roundtables. Make it a free for all. Sure, you'll get lots of doubling at first, laugh about it and go on. Good interesting conversation cannot be regimented. Remember, to make conversation interesting, you have to have something interesting to say. Make an effort to find something interesting you want to

tell others about every day. Keep alert, keep alive. Learn to really listen, ask questions, participate.

>9. Morse Code can be made an attraction. The challange of distant
>communications with minimum power. But, this is pushing. It is still
>unfavored by most new hams. How can a club make it more interesting?

Yeah, that's pushing. :-)

As everyone here knows, I am not a fan of Morse. But if you can make it a fun *game* to others, then you've got a chance of doing something with it at club meetings. Young kids especially seem to find it fun to *play* with. Keep it light and fun. Morse is so easily deadly dull drudgery. I don't know any way to make this a major draw, but you may be able to do something with it.

(Besides, if you want to make minimum power contacts, there are much better ways than Morse. That's a subject for several programs in itself.)

>10. HELP! What say? I really want your constructive thoughts and ideas.

I think you can see that revitalizing a club is a big challenge, and it will require lots of time and enthusiasm on the part of the members to make it work. You can do it. The club I spoke of eariler grew from five members to sixty during my term. The trick is to make it lively and fun for everyone. Enthusiasm is contagious. If you've got it, you can give it to others.

It is far too easy to sit on the back benches and grouse. That won't get the job done. You've got to get out front, put a smile on your face, and in your voice, and lead. The more energetic and enthusiastic *you* are, the more energetic and enthusiastic your club will become. There will be times when you get discouraged, and your enthusiasm will flag. People will naysay you. Don't let that bother you. Just keep focused and keep pushing. If you think it is worth doing, then it's worth doing, and doing right. You're only here once, make it count.

I don't recall that Carl was concerned specifically about the HF bands.

IMO, it is the bands on 900 MHz and up that are most valuable.
Certainly the recent FCC spectrum auctions are evidence of this *FACT*.
How many corporations are paying big bucks for HF access, Michael?

So we get some more of the garbage bands on HF...big deal.

The Mastr II makes an excellent repeater. Crystals can be ordered from all the usual sources (Jan, Bomar, International, etc). You need a service manual, and those are still available from GE/Ericsson. Basically what you want to do is make the receiver live all the time, split the RF for Rx and Tx, and add a controller. I use the S-Comm 5k. It's a good basic controller. There are notes in the manual telling you how to interface to a Mastr II.

Note: when you split RF, be sure to leave the final harmonic filter in place (it's integrated with the TR relay). Just pull the receiver connection out separately to another coax connector. To make the receiver live all the time, you just need to jumper one connection controlling receiver A+. This will be obvious in the manual.

Micors can be made into good repeaters too, but they are better suited to packet. The Mastr II uses PM while the Micor is direct FM. That makes it easy to modify for 9600 baud. To make it a packet repeater, a bit regenerator (available from TAPR) can be added between the receiver discriminator and transmitter varactor modulator. Use a TNC Teed off the receiver to supply COR (via its DCD circuit), and let its firmware handle CW ID. TNC2s already have a timeout timer, so that takes care of that too. Otherwise the same steps as are used to make a Mastr II a repeater are followed. Make the receiver live all the time, and split Rx and Tx RF.

I'm not sure you can still get new service manuals from Motorola for the Micor, but there are plenty of used manuals floating around. Check at any hamfest.

Both radios have sufficient internal shielding to function as repeaters. You don't need to split them out to separate boxes. Just be careful how you route the receive coax, use double

shielded cable, and be sure to use a hood on the chassis
connector. Turn down the output power too (there's a power
control adjustment). That'll make them run cool and live a
long time. I usually turn them down about half way, IE down
to about 50 watts for a Mastr II.

You won't need control heads or cables for either radio,
so you can discard those. And you won't be using much of
the original control board in the radio either. Control
will be handled by the controller, or by the TNC.

You'll need a good duplexer too, of course. DB Products, Sinclair,
and Tx-Rx Systems make suitable ones. If you'll be putting it up
on a high RF site, be sure to add a circulator to the Tx too.
That'll make you a good neighbor to the other repeaters on the
site.

Amen, Carl. It isn't necessary to homebrew to be a ham, but a person
who doesn't even want to know how a radio works isn't a ham. He's
just a "communicator" who really belongs in another radio service.

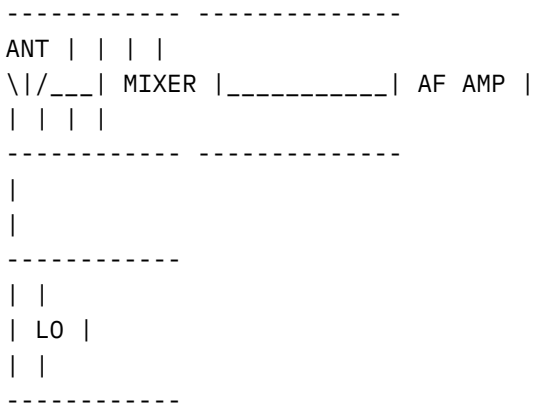
>enable me to build this type of receiver?
>Many thanks.

Jason, a DC receiver is one of the simplest receivers to build,
and one of the harder ones to get to work well. Basically it
will look like this,



There are three circuits, the mixer, the local oscillator, and
the audio amplifier. The mixer can be a diode ring mixer like
the SBL-1, or it can be a Gilbert cell mixer. The LO is tunable,
and is often a Colpitts circuit. The audio amp is the heart of
the receiver. It has all the receiver's gain and selectivity,
such as it is, built into it. Often it is a couple of cascaded
opamps used as state variable filters and gain blocks driving
a LM380. A discrete transistor may be used at the input to set
the noise figure.

You often want to add one more circuit. This is a preselector
filter between the antenna and the mixer. This keeps strong
local signals, like AM broadcasters, from getting into the
mixer and rectifying there.

The key is the audio amp. It has to have gobs of gain, be stable,
and free from hum and other noise. Usually, you'll be best running
it off a battery to keep mains noise out of it.

I'd suggest you build each of these circuits as separate modules.
Get each working properly individually before trying to combine
them.

This works really well, Brian. You need good repeater controllers
to make this work right. There are a couple of controllers out there
which already process repeater audio digitally, A/D Technologies is
one local company which offers that. Using 56 kb, you can link the
controllers, forward voice mail, phone patch from any repeater in
the system, etc.

ARRL Bulletin 76 ARLB076
From ARRL Headquarters
Newington CT October 30, 1996
To all radio amateurs

SB QST ARL ARLB076
ARLB076 FCC computer down

The FCC's Gettysburg, Pennsylvania, office reports that its amateur
computer system has been down for the past two days because of
unspecified difficulties. Despite the current problems, the FCC
still hopes to begin issuing Gate 2 vanity call sign grants by the
end of this week, starting with the first-day applications now
entered into their computer system.

Hams are asked to be patient and to refrain from calling the FCC to
inquire about the status of their vanity call sign applications. The
Gettysburg FCC Office Consumer Assistance Staff is not able to
provide further details on the delay.

On a related note, due to the amateur system difficulties, no new
amateur license or upgrade grants have been released since this past
weekend.

6143. KENWOOD TH-79AD(H) MODIFICATION SUCCESSFUL

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-31 00:00:00 UTC
From: laast21+@pitt.edu
Message-ID: <55ag9d$a2f@usenet.srv.cis.pitt.edu>
Source record: 213710
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.misc

I've seen questions regarding this in all three forums, so I've crossposted.

Very recently picked up a Kenwood TH-79AD(High-Power) handheld. After searching the net for a day, and finding out not much of anything, I decided to experiment. I'm sure all of you have been looking.

The serial number (date code) on the radio is 7040-something. Brand new unit.

Despite what the original author believes(talked with him yesterday), the published mod for the 79a *DOES* work. I have a couple suggestions to add though.

First, the original mod suggests that you remove the ribbon cable. From the people who have tried this method, it seems as though they have problems with their keyboards. Chances are, the ribbon cable (which incidentally is *really* thin) is probably not being put back correctly. Suggestion #1 - LEAVE THE RIBBON CABLE ALONE.

Next, There is the MARS/CAP modification that tells you to CUT the green wire. From what I've seen and heard, you can only do the MARS/CAP modification or the wideband modification. In my opinion, unless you need specific access to 420-438mhz, I'd leave it alone. I simply did the wideband modification. I'm not going to repeat(or look up for that matter) what freq's it opens up, but I'm summarize the results. EXTENDED RECEIVE AND EXTENDED TRANSMIT.

I talked with an electrical engineer who did surface mount tech work for Panasonic. If you don't know what surface mount tech involves, THINK small. Not just small, tiny tiny tiny. He used magnifying glasses, special lights, and even microscopes to work on some units. It requires special tools.

The people I've talked with have had problems trying to desolder this diodes. THEY ARE WAY TOO SMALL AND TOO CLOSE TOGETHER.

Now listen, I'm just a regular kid off the street. I've assembled heathkit projects, and built little tone generators and the like. I don't have any surface mount experience at all. I certainly don't have the tools or the skill. After talking with this tech, he suggested that I cut the diodes off the board with an exacto knife. Didn't have one of those either. So I used one of those tiny flat head screwdrivers you buy at Radio Shack.

VERY CAREFULLY, I took the screwdriver and pressed down firmly on the legs of the diodes. This literally cut the diode from the leg soldered on the board This would normally sound hard to do, but remember these legs are a FRACTION of a millimeter. After that, I used tweezers to pull the diode off the board. BTW, the diode is glued to the board, but a firm pull removes it. I did this to the two diodes. I removed both diodes cleanly. No damage at all to the

PC BOARD.

Put back the four screws, turned on the unit and blam-o. One modified unit.

Think this is a fluke ? Think I got lucky ? Nope. A friend brought his 79AD(H) over, and he performed the mod exactly the way I had mine. BOOM, clean removal, no problems. No keyboard problems, no iradic operation. Just a clean uncensored radio.

This is not meant to be a standalone mod. Use this message as an addendum to the original modification document. Its like rel 1.5. The filename everywhere is '79a.txt' in the Kenwood directory under mods. The file structure is basically setup the same everywhere, whether it be FTP, HTTP, or gopher. mods/kenwood/79a.txt. Searching a web engine like http://www.altavista.com or http://www.lycos.com or http://www.yahoo.com will definitely yield results.

Hope this answers any questions. Thanks to Renegade.

VeeBee

Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Hi dr OMs & TNX for selecting this msg.

Maybe you've experienced radio disturbs from the PC.
The kind of disturbs dealt with here, are the ones
produced by PC monitors.
You immediately identify this kind of disturbs when
they disappear completely, after switching off the
monitor, even if the PC is on.

If this happens while you are connected to a DXCLUSTER,
sometimes you have to switch the monitor off to receive,
then on again to see the spots.

What I suggest is not a particular wiring or screening:
just change the spot reception philosophy.
I mean: instead of looking at the spots on the screen,
you can listen to the spots, being spelled by your PC.
How? DXHUNTER will do the job for you.

You can have the spot voice spelling either on a sound
card (Sound Blaster like) or on the PC speaker, with
good quality.
You can set DXHUNTER for a voice spell on new ones only,
or set it for a voice spell on any spot.
You can replay the last spot if you loose part of it.
Spots are spelled entirely (Call and Frequency) and a short
audio warn prompts you to get the spelling.
If your ear works better with CW than voice, you can set
DXHUNTER for a CW spell.

What do you think about it?

You can download DXHUNTER from
http://www.funet.fi/pub/ham/hf-work/
file name DXH51ENG.ZIP, size 1.1 M.
A txt file is also available (DXH51ENG.TXT) where you can
have a summary of DXHUNTER's features.

Even if you don't agree with my solution, about fighting PC
Monitor's noise, you can discover other interesting features
that may solve other problems.

73 to all, de Fabrizio (IK4VYX).

Eugene Rippen (soundval@foothill.net) wrote:
: I would like to get some suggestions and ideas for attracting younger Ham
: to our club.

: The average age of the members at present is in the 70's. WE can't even
: get volunteers for officers because of the dwindling membership problem

How about offering classes at your club? We have a No-code Technician class running almost continuously. Not only will this attract prospective hams, but I've found that they almost always join our club as soon as they pass their exam.

I started teaching an Advanced class last night and, to my surprise, there are seven students enrolled. Our oldest student is in his early 70s, but they range from the 20s up. I plan to offer an Extra class after this one, then will get around to teaching a General class, offering each level as demand warrants in the future.

The classes are almost exclusively our source for "new blood." Without them, our membership would surely dwindle over time.

One problem is getting instructors who will commit to teaching the entire class, or having enough instructors to share the teaching load.

We also have a young fellow who made the trip from no license to Extra in less than a year. We show him off as an inspiration to all members, young and old. He's just beginning his junior year in high school!

: 1. The meetings are once a month on a Friday night. I believe this is
: one of the biggest drawbacks to getting younger members. They are either
: out with there families (Pizza parlor, etc,) or out looking for social
: companionship.

Possibly, a Friday meeting is not a good idea. That's when our club meets for its monthly business meeting. We generally draw a larger crowd whenever we have a program, and getting one for each month is no easy task.

We have a weekly gathering each Wednesday, and this is also when classes are offered. Turnout on Wednesday is generally larger because of the students being there, and because it's a good eyeball session for those who are not teaching or being students. The Friday meetings attract the hams of longer standing with the club (read: older) for the most part, and more of the young crowd show up on Wednesday.

You could see if more members would attend if the day were changed. Experience has taught me that there is no day of the week that is good for everyone. Friday has the advantage that most folks don't have to get up

early the next morning, so if the meeting runs late, it's less of a problem.

Our club currently has 180 members, but it seems to be the same 30-40 who show up. I've been Treasurer for about a year and a half, and I'm still meeting people who dutifully send in their annual dues, but show up only for certain events, such as Field Day or the picnic or Christmas party.

: 2. The 10 mile radius has about 40,000 population, 20 mile about 110,000.
: There are no other ham clubs until you get to the big city 30 miles away.

This year, a council of amateur radio organizations was established here in the San Bernardino-Riverside-Pomona area. We have 15-20 radio clubs in the immediate area, and several of our members belong to two or more of these organizations.

: 3. The local High School has no ham club.

Only Redlands HS has a club, to my knowledge; and a mighty fine one.

: 4. I don't know if the local Community College (15 Miles) has a club.

Those around here don't, as far as I know. These things usually come and go for want of a faculty sponsor who is also a ham.

: 5. What about sending a direct mailing to the younger hams? Did any club
: try it? Did it work?

We get a prospect list of new hams from ARRL each month. Our newsletter editor mails each of them a copy of our newsletter.

I suppose I should start asking
new members how they heard of our club, to test the effectiveness of this approach.

: 6. Some of us (myself included) still use and appreciate tube type gear.
: Can this be turned into an attraction, or is it a negative for attracting
: younger Hams?

Same here. We have 4-5 of us who are boatanchor enthusiasts. One younger member (high school junior) joined our ranks recently, because his first radio for HF, as a General, is a Swan. Actually, there are more than 4-5 of us, but that's the number who most often sit around and talk about older gear.

I wouldn't say that it's a negative; just that newer hams don't get much exposure to vacuum-tube theory on their exams.

We have some older Hallicrafters and Collins gear that was donated to the club by the widow of a SK. We often fire it up, and use it to make contacts. If you use it, you'll get some attention. We will be having a special event to celebrate the 50th anniversary of our club, and we'll be using this older gear, right along with our IC-706 and Kenwood .

: 8. My personal thoughts are that the days of rag-chewing-hamming are on
: the way out, as far as that being the main interest, as that is replaced

: by internet. I think it has to be some reversion to the technical side,
: including home brewing. What can a club do here?

We formed a Technical and Operations Committee. This group is responsible for teaching theory and operating practice, as well as maintaining the club's equipment, and running Field Day and special events.

Unfortunately, all too many of our members are taken with packet; not so much the Internet.

: 9. Morse Code can be made an attraction. The challange of distant
: communications with minimum power. But, this is pushing. It is still
: unfavored by most new hams. How can a club make it more interesting?

Again, show how it's useful. Using the older equipment seems to punctuate the point. We also teach code classes on Wednesday evenings.

Hope this is helpful, Gene. Let me know if I can answer anything more specifically.

There are many digital modes that will provide 100% error-free copy at signal to noise ratios where CW signals long since ceased to be hearable by ANYONE ... even the most skilled CW op cannot copy what can't be heard.

PACTOR is one, there are others in existence, and many more yet to be invented by clever hams, if we are given the opportunity to conduct such experiments ...

Message-ID: <32d56bff.838637236@nntp.ix.netcom.com>
Source record: 213722

I need a fancy morse code keyer which can record a message. I don't
really know what kind of stuff is available, because I've been out of ham
radio for decades. But what I need is basically something you can key
a message into, and then play it back endlessly. It would be connected
to the equipment in place of an ordinary morse code key. (Assuming
ordinary morse code keys are still used.)

Hi,
Didn't see the original post. It's a 5 bit baudot code. Most of the TDD devices were like old Model 15 teletypes. I worked on a modem a very long time ago and I seem to recall the mark / space frequencies were pretty close to the 170 HZ shift on 300 baud modems.

I'm guessing that are looking for a way to connect a computer to a TDD line, There are some commercially available units that do this. If you can latch onto an old 300 baud 'cradle' acoustic modem, you're not that far from be able to accomplish it. You need to (1) get on the same audio frequency pair. (2) Be able to build a 'lookup table' to translate the baudot to ascii, back to baudot. I think a slick way to do it, would be with a soundblaster, but haven't given it much thought over the last 15-16 years. The baudot code might be in the ARRL hand book. It used to be in that little blue and white TTY primer.

Hi,

I wonder if anyone has (or knows where i can get hold of)
technical information for a Motorola MT700 FM handi.

I've got one of these units at present, it cost me a couple
of pounds at a local car boot sale, it seems to be working fine.
TX is 461.625 / RX is 456.125 with a 110.9Hz tone squelch unit.

I'm interested in converting it down onto my local 70cms repeater
freq. (433.325) and would be grateful if anyone can give me
some info.

Cheers,
Richard

Few in the amateur community are yet aware that with the
closing of all 15 FCC monitoring stations that the FCC has completely
abdicated its congressionally mandated responsibility to monitor &
regulate the spectrum.
Discussions of "remote monitoring" schemes are just that, schemes
to fool Congress and the public. There IS no more spectrum
monitoring capability, Chairman Hundt's lies notwithstanding.
Character & integrity left the FCC with the appointment of
Reed Hundt to Chairman by his college buddy Clinton.

Not to mention that the problem with HF is that only a few people have a
much wider impact due to propagation characteristics of the band. You can
have 5 people cause problems for 500,000. You cannot do that on 2 meters.

This is a shameless promotion for my book on Heathkit --Chuck
==========

Heathkit: A Guide to the Amateur Radio Products
By Chuck Penson, WA7ZZE

Reviewed: March, 1996 issue of QST magazine.

This is the definitive work on the Heath company, and a "must have" for collectors and anyone interested in Heathkits or vintage radio. The 250 page book contains:

-- a brief history of the company and its product development track.
-- a cross-referenced index to more than 160 products.
-- a comprehensive reference section to reviews, modifications, and articles found in QST and CQ magazine.
-- a product-by-product description and large, high-quality black and white photographs of every amateur radio product the company made from 1947 to 1991.

In researching the book, the author interviewed more than a dozen former employees and many of the engineers that designed and built the now classic Heath ham equipment.

$24.95 plus $3 shipping and handling.

Source record: 213738

From Reuters News today:

"Thursday October 31 5:10 PM EST

Report Finds Power Lines Pose No Health Risk

WASHINGTON (Reuter) - In 17 years of research, scientists have found no hard proof that electric power lines near homes are a health hazard, the National Research Council said Thursday.

"Specifically, no conclusive and consistent evidence shows that exposures to residential electric and magnetic fields produce cancer, adverse neurobehavioral
effects or reproductive and developmental effects," the council said in a report reviewing 500 previous studies.

The studies focused on health effects of magnetic fields -- considered the main potential threat --created by power lines, wires and electric appliances such
as hair dryers, microwave ovens, and computer terminals. Appliances create the highest field strengths to which people are commonly exposed.

Concern about electromagnetic fields grew after research in 1979 found that children living near
power lines had higher rates of leukemia than other children.

But the council said childhood leukemia research to date was flawed because it measured exposure
by estimating magnetic fields inside homes based on the distance of the power lines from the homes,
current and size of the wires. It said actual measurements of magnetic field strengths inside homes
showed little correlation to ratings of the wires outside the home.

"No evidence links contemporary measurements of magnetic-field levels to childhood leukemia," the
report said.

"All we can do is say living near power lines has a statistical association with childhood leukemia, but
we don't know what the cause is," said Dr. Charles Steven's, a professor at the Howard Hughes
Medical Institute and Salk Institute in California who led the 16-member panel reviewing the studies.

Calling for more research, the council said the leukemia tie might instead be due to other factors,

such as the age of homes, pollution and heavy traffic in areas near power lines.

Laboratory tests exposing animals to the low-frequency magnetic fields common in homes did not
cause cancer, even at high doses, and did not harm animal reproduction, development or behavior,
the report said.

Similarly, tests on tissues and cells found no damage from low-frequency magnetic fields. If anything,
magnetic fields might have had some benefit, aiding bone healing in animals.

"Science can never really prove that anything is safe," David Savitz, a professor of epidemiology at
the University of North Carolina, told a new conference. With this report, he said, scientists have
simply "failed to find a hazard."

But the National Research Council called for more research into the link between high exposure to
electromagnetic fields and breast cancer in animals already exposed to other cancer-causing agents.
More research is also needed on why electromagnetic fields appear to affect the levels of the
hormone melatonin in animals but not in people, it said.

The report did not discuss concerns about electromagnetic fields created by cellular telephones.

The three-year review was called for by Congress and sponsored by the Energy Department.

While utilities felt vindicated by the report, they said they hoped it would not discourage Congress
from continuing funding of a five-year joint government and industry research program on
electromagnetic fields that began in 1994.

"We've felt all along that there weren't enough lab studies," said Mary Kenkel, a spokeswoman for
the Edison Electric Institute, which represents investor-owned utilities."

SB QST ARL ARLB077
ARLB077 FCC computer update

Once again, the word from Gettysburg is ''next week.'' Maybe it was early Halloween gremlins, but unexpected problems that have plagued the amateur computer system at the FCC's Gettysburg office all week have all but eliminated any chance that Gate 2 vanity call signs will be issued in time for this weekend's ARRL November Sweepstakes CW contest. Hams antsy to learn when they'll get one of their vanity requests have besieged the FCC with phone calls this week. A spokesman at Gettysburg said Thursday, however, that he doubts that the FCC will be ready to issue any vanity call signs until sometime next week. ''I'm 90 per cent sure it's not going to make it this week,'' he said.

Some optimism flared when October 30 grants appeared in some call sign databases, leading to speculation that the vanity call signs might soon follow. However, the FCC has announced that any grants dated after October 24, 1996, are invalid because many of them were erroneous.

The unspecified computer problems are not related to the vanity call sign program. FCC personnel in Gettysburg already have entered data from the more than 4500 first-day Gate 2 applications, and are poised to start granting licenses once the computer problems are resolved, the spokesman said. The FCC anticipates that event could happen ''by the end of next week.'' It's not known how long it will take to process all of the first-day applications, since this will be the first time the FCC has run the program using ''live'' data. Before processing, however, the FCC wants to ''be sure everything is going to work well,'' the spokesman said. In the meantime, hams are asked to be patient and to refrain from calling the FCC to inquire about the status of their vanity call sign applications.

Called the FCC this afternoon at 1405 EST 10/31/96 and asked two
questions:

1. Q - Have all of the first day applications for gate
2 callsigns been entered into the system?

A - "Yes, they have."

2. Q - Are you processing them?

A - "We are waiting for the system to allow us
to run them."

ARLB076 FCC computer down

ZCZC AG56
QST de W1AW
ARRL Bulletin 76 ARLB076
From ARRL Headquarters
Newington CT October 30, 1996
To all radio amateurs

SB QST ARL ARLB076
ARLB076 FCC computer down

The FCC's Gettysburg, Pennsylvania, office reports that its amateur computer system has been down for the past two days because of unspecified difficulties. Despite the current problems, the FCC still hopes to begin issuing Gate 2 vanity call sign grants by the end of this week, starting with the first-day applications now entered into their computer system.

Hams are asked to be patient and to refrain from calling the FCC to inquire about the status of their vanity call sign applications. The Gettysburg FCC Office Consumer Assistance Staff is not able to provide further details on the delay.

On a related note, due to the amateur system difficulties, no new amateur license or upgrade grants have been released since this past weekend.

Once again, the techno-bigot comes to the forefront.

There are plenty of non-technical activities associated with amateur radio. Emergency communications is a good example. One does not need to have an understanding of how the "internals" of the radio works to be a valuable asset to the amateur community in this regard.

Whenever I read through QST and see a story about hams providing public-service communications (Red Cross or public events) or emergency communications (such as after Hurricane Andrew) I do not get the sense that these people contributing to "the cause" are a bunch of techno-wizards out "roughing it". Rather, I get the impression that they are a cross-section of Americana attempting to make a contribution in a way that they see fit.

In this respect, I find your comments insulting and degrading to a large portion of the amateur community. This seems to be nothing new with you, as you seem intent on insulting the very core of people you somehow want "support" from for your codeless HF license idea. With this type of obnoxious attitude, its any wonder that you have friends at all -- of course, they're probably all a bunch of techno-bigots looking down on the rest of society like you do.

Amateur radio is about more than technology. Its about >communication<. Communication is something that you seem incapable of doing. I recommend that you get a hobby that you will find more personally rewarding. Perhaps going around kicking small animals will be more personally enriching for you.

It is pretty funny to watch what happens to digital modes during a long-term
power failure.

After our last major hurricane, it was amusing the watch the packet
stations all go down one-by-one as the computer systems that ran the
backbone drained their backup battery supplies.

There is some software at various ftp sites to enable a PC to send and receive Baudot.

There is a description of the modem, I think, in the comp.dcom.telecom archives. It isn't normal FSK. The trick with TDD is that the modem tones go off when you aren't sending, so there is automatic send/receive switching.

This argument is quickly growing very lame, Rich. So in the United States there are two dozen guys on 80 meters raising hell, and on 14.313 there are two dozen more fighting with the sailboat/phonepatch group. So what. Don't listen, and it won't bother you any more.

Ham radio isn't any different than any other group of people. If you want perfect people, turn off the radio and go to Sunday School.

>I spend most >of my time using CW on HF, but, quite frankly, I'm
>getting quite tired of the RST/WX/QTH QSO's. When I attempt to

>other op's XYL suddenly needs them, urgently.

Could be several explanations for that phenomenon. First, maybe you are being ignored when you ask questions because your sending is so bad the other guy can't figure out what you sent. Second, mosts hams are pretty boring people. You have to really do some hunting around to find someone interesting to talk to. Maybe YOU are boring, that's why nobody wants to talk to you. Hard to tell, since I haven't heard you on the radio, but those are some possibilities for you to ponder.

>On the VHF+ bands, on the other hand, I can *always* find someone
>who wants to talk intelligently about construction, a new digital mode
>to try out, or even, *gasp*, something other than radio and the
>traffic conditions on the expressway.

Well, there you go. Turn on the VHF radio, and turn off the HF radio. That's how ham radio is supposed to work, you go do the part that YOU think is the fun part, and live happily ever after.

>and the saboteurs were fighting to maintain traditional death and disease.

Sounds a LOT like the pro-code crowd ... they're "fighting to maintain
traditional things that will cause the death of ham radio through decay
and attrition ..." ... and most of their rhetoric "smells bad" ...
<grin>

Another, probably hopeless, appeal to logic from the pro-coders:

Why you people insist on some manual-dexterity "requirement" that's
clearly irrelevant to one's knowledge of radio and electronics?

This is NOT a competitive sport where one's physical coordination =
machismo = "better" ... it is a technical endeavour where one's
intellectual prowess and knowledge and the bettering thereof are
supposed to be the goals.

Why must some of you insist on trying to turn it into some sort of a
physical coordination/agility/ability contest?

If you want to demonstrate physical abilities, go play sports with the
rest of the jocks ... and leave us radio geeks alone ... <grin>

I just thought I would put my $.02 in...

I am a Tech Plus. Admittedly, I AM being held back by the code requirements. However, I think the current priveleges levels are fine. Digimodes need to stay where there is enough room for them. I've said it before, and I'm gonna say it again, CW IS THE BEST MODE FOR EMERGENCIES!!! Sure, there are modes that may be able to get through QRM easier, but how many of those modes can be home-brewed by the normal user??? How many of those modes DON'T require a computer? CW is valuable. Don't let HF become more like CB.

Just my $.02, remember?

6204. Public Service Top 10 List

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-31 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BDLw3pG.sanderman@delphi.com>
Source record: 213801

10 Ways to Optimize Your Effectiveness in Public Service Events
by Willam L. Continelli, AB2CA

1) Make sure your radio is in top operating condition. Small problems (such as loose antenna connections, bad microphones, intermittent operation, etc.) may be just annoying during casual operation, but WILL cause major grief under the continuous/severe service of net/emergency operation. If your radio's not in 100% top shape, buy, beg, or borrow one.

2) Don't operate your handheld with it hanging on your belt. Using the radio while it's strapped to your waist reduces your effective radiated power by more than 10 dB. That's a 90% reduction in power! Hold the radio in your hand, with the antenna in the clear.

3) Regarding antennas, those 3" rubber dummy loads may be cute, but you're throwing away 3-6 dB of power when using one. (If you're REALLY into math, compute the loss of a 3" rubber dummy load used on a beltclip). A telescoping half-wave has a gain of as much as 10 dB over a 3" rubber duck and a quarter-wave provides a 4-6 dB improvement. Even a 12-15" rubber duck will boost your signal by 3-6 dB over the 3" ones. Remember that one dB can mean the difference in whether or not a critical message gets through.

4) Have charged batteries and spare battery packs! If you also have a dry cell battery case, fill it with alkaline batteries. Make sure you have enough batteries with you to carry you through, even on high power.

5) Use headphones or an earphone rather than a speaker/mike. Most earphones will plug directly into your HT. Low cost stereo headphones are widely available and will work perfectly with your HT using a mono to stereo adapter. The headphones also have the advantage of concentrating the communications in your ears, while partially shutting out the outside noise. Headphones will also prolong battery life by allowing the radio to operate at lower audio output. A speaker/mike is the worst thing you can use--it doesn't cut the outside noise, it doesn't save batteries, and where is that HT while you're using the speaker/mike?? (Hint--see #2!)

6) Speak slowly and clearly when transmitting! You may take pride in your ability to run your words together and mumble, but the station on the other end may be in a noisy environment and may not receive your message.

7) Check out your ability to use simplex. Even if the operation is being conducted on a repeater, there may be "dead spots", the repeater may go down, or, sad to say, there may be jamming. Even if you can only work the 2 or 3 stations closest to you, a message can still be relayed. To maximize your simplex range, please reread #2 and #3.

8) Listen to net control and direct all communication through him/her. Identify your station when calling net control and keep all communications direct and to the point.

9) If you must leave the radio or the area to which you have been assigned, first seek permission and acknowledgement from the net control station, make your "time off" as short as possible, and check back in with NCS immediately upon your return.

10) Project a good image to the non-hams around you that are part of the event/emergency. This means acting professionally, using basic hygiene skills, etc.

Let's face it, as reported in the last issue of W5YI Report, there's
a bill in Congress to turn over home entertainment & electronics
interference authority to the individual states. Llicensing requirements
for aircraft & ships has been canceled. AND the House Telecommunications
subcommittee next year will begin a top to bottom review of ALL
employee positions in the FCC.
The handwriting is on the wall. The FCC has squandered & wasted
too much of the public's money!
Also the Heritage Foundation & Progress Freedoms Foundations
indicates they are preparing for a new round of Congressional
hearing next year on the FCC's future.
